The following cable has been received from the managing director in Ceylon of the Ceylon Company of Pearl Fishers, Limited:—"The manager reports estimated quantity of oysters in sight 31,000,000. Valuation of oysters later on. The report is very favourable." An office note adds:—"This forecast is subject to confirmation at the final inspection of the pearl banks in January, previous to the fishery, which commences towards the end of February." Will the oysters bear pickling?

The Investors' Review.

The Week's Money Market.

BANK RATE 6 PER CENT. (Advanced from 5 per cent. on Friday, October 19.)

Norfolk House, Friday Evening.

Because the Bank return was better than recent weeks have given us dealers in credit yesterday became quite hopeful of an early reduction in the Bank rate, and they may be right. The Bank, however, is not nearly so strong as it looks, or at least the market is not, for the increase of £1,874,000 in the other deposits is really Japanese Government money, and we should judge the market itself to be poorer in means from the mere fact that other securities have been reduced by £2,662,000. Proof that this view is probably correct was found in the large business done yesterday at the Bank in short loans at 6½ per cent. It also did a little discount business in short bills taken at 6 per cent. And the increase in the reserve is nothing remarkable seeing that we have a 6 per cent. rate in force and fairly effective, and that £1,472,000 in gold came in from abroad during the Bank week. Internal currency also tends to come back towards the end of a month, but goes out again at the beginning of it. The taxes bring it in and the payment of Exchequer demands disperses it, but the reserve is still small in view of the end of the year demands upon it. Generally between this date and December 31 the internal currency expands by between £3,000,000 and £5,000,000. This year, owing to the remarkable activity in trade, the expansion may be larger than the average, and in that case we shall soon again begin to think that reserve insufficient for our requirements. Its total now is only £23,614,000—little more than the total at this date last year—and by December 27 last the reserve, which had been £23,292,000 in the last week of November, was brought down to £17,629,000. If our Bank rate were to come down now and this internal drain of currency to take place in the usual way, accompanied as it probably would be by renewed exports of gold, we should have a perilous state of things at the end of the year.

Therefore our contention still is that rates ought to be maintained, hardship though it be to have a money market in such a strained position. We may have comparatively uninterrupted calm if rates for short credits and of discount are kept up now, but if they are let down on a temporary improvement in the position of the Bank of England they will be driven up again at no distant date. Money all this week has been comparatively easy. Bankers at first struggled to get 5¼ per cent. for seven-day advances, but they had to accept 5 per cent., and call money came down to 4½ per cent. and even 4 per cent. in the early part of the week. On Wednesday and Thursday, however, the supply became less, partly because of joint-stock balance-sheet making and partly because of the Stock Exchange settlement, which as usual required an enormous amount of credit; so much that, as we have said on pay-day, borrowers were driven to the Bank for a heavy amount. This did not prevent money from being easier to-day. Call loans began at 6 and ended at 4 per cent. and seven-day money was only 5¼ per cent. at best.

Discounts came down not merely with money, but because there is a great temptation as the end of the year draws near to speculate for lower rates. A three months' bill now carries the buyer to the beginning of March, and long before January is out the least hopeful expects to see the Bank rate down and short credits per cents. cheaper than they are now. The actual state of the short loan market is therefore more and more disregarded, and holders of bills strive to beat rates down, while buyers are tempted by the probable profit that the later weeks of a three months' bill's life will give. Some of the big bill broking houses have been above the market all the week, with their public quotations at least. While they were giving 5¾ per cent. as their rate on ninety-day bills, and 5⅞ to 6 per cent. as the sixty-day bank bill rate, business was being done in threes at 5 11/16 per cent., and in twos at 5⅞ per cent. Generally rates held round about these quotations until yesterday afternoon, when sellers at all events began to talk about 5 9/16–⅝ per cent. as a practicable three months' rate. Some even spoke of 5¼ per cent., and quoted 4½ per cent. for six months' bills, payment to be made next week. But the actual business of the day in threes was mostly done at 5 11/16 per cent., and in the morning something seems to have been done at 5¾ per cent., thanks to the extreme scarcity of short credits.

Further progress was made this morning in breaking down the market. One or two houses stuck to 5½ per cent. as their minimum rate on three months' paper, and got business at the figure. Others say that they placed their sixty-day bank bills at that rate, and the more powerful holders were able to place mixed parcels of threes and fours at 5¼ per cent., while the rate for sixes fell to 4 3/8 per cent., the bills to be paid for in the new month. People were betting that the Bank rate would be down next week, all just because the reserve has risen to a figure slightly larger than it was this time last year, when the Bank rate was 4 per cent.

Even though gold continues to come to hand we think rates are tumbling back too fast, but the market never stops to weigh *pros.* and *cons.*, and no mere theoretical opinion will influence its action, only another gold fright. Gold, however, will continue coming in from many quarters as long as the 6 per cent. rate is maintained. The Indian banks will be sending it here soon from Egypt instead of to India direct, as they can buy their rupees in India with it at 1s. 4d. Further amounts may also come from Paris, and the Bank is securing all the gold reaching the market from the mines. The outlook is good, therefore, if rates are maintained. Let them come down, and we shall have gold going out to Argentina as well as further amounts to Brazil, while export demands may arise upon us in various other quarters.

SILVER.

The American and Indian Governments have been quite out of the silver market, while very little support has come from the bazaars. At the same time, speculators have been desirous of securing their profits, with the result that offerings have largely exceeded the demand most days and quotations drifted back to decidedly lower levels. They touched 32d. per oz. for both spot and forward metal on Wednesday, but with supplies curtailed by the holiday in New York a little buying back caused a rally to 32⅜d. per oz. for cash and 32 7/16d. per oz. for future metals. To-day, however, sellers again predominated, and closing prices reacted to 32d. and 32⅛d. respectively. Applications for the Rs. 1,00,00,000 Council drafts on India amounted to Rs. 3,79,20,000 in bills and Rs. 2,88,00,000 in telegraphic transfers, of which Rs. 32,87,000 were allotted in bills and Rs. 67,13,000 in transfers. Tenders at 1s. 4 3-32d. for bills and 1s. 4⅛d. for transfers received about 22 per cent. Money in India has hardened considerably and special sales of another Rs. 23,00,000 in transfers were made on Wednesday at 1s. 4 5-32d., while next week the Council will offer Rs. 1,20,00,000.

Stock Market Notes and Comments.

We have nothing to say about markets this week that would be in the least degree fresh, and so much space is taken up by the regular survey of the week's business that it would be only going over the same ground twice to enlarge under this heading. We keep it alive, however, in the expectation that presently there may be a good deal to comment upon. To us the most astonishing thing this week has been the complete absence of any signs of embarrassment at the settlement. We wish we could think this a favourable symptom. In some respects it may be showing strength where weakness might reasonably have been looked for, but in others it is only one more proof of the extent to which corporate credit has taken the place of individual. In the big markets, too, there is almost as much syndicating as in Yankee trusts, and the individual is more and more at the mercy of the great campaigners.

BANK OF ENGLAND.

The Week's Stock Markets.

General business in the Stock Exchange is rarely important while the fortnightly account is in process of adjustment, and the past week was no exception to the rule. Markets, however, continue with a fairly confident tone, which was considerably emphasised after the Bank return came out showing such a substantial addition to the reserve. Unless something very terrifying takes place it seems likely that the monetary demands this year will now be provided without the necessity of a higher official minimum, and already dealers are beginning to discuss an early reduction. Such a step would bring great relief to some of the overloaded bulls, as recent contango experiences must have proved exceedingly exhausting to many. When fortnightly loans were arranged on Monday last some of the credit dealers spoke of a slightly smaller demand for money, but we do not think anything more than a shifting of accounts from one hand to another has taken place. So far as could be discerned the account to be continued was as large

as ever, a great quantity of money being again required in the American market, and bankers had no difficulty in securing 6½ per cent. for fortnightly advances, allowing the usual ½ per cent. to money dealers. Where fresh credit was required the charge was again 7 per cent., but if there was no reduction in the account there certainly did not seem to be any increase, and very little additional accommodation was sought. One failure was announced on pay-day, but it was unimportant, and, on the whole, the account was settled with the accustomed ease. Consols hung fire most of the week, but the effect of the increase in the Bank reserve was immediate, and prices shot up smartly notwithstanding the imminence of the monthly carry over which commenced yesterday, Monday next being pay-day. As anticipated, rates were fairly onerous, quite 5⅞ to 6 per cent., hardening late. Other British Funds, which had also been dull in places, followed the premier security, and an important rise of about 6 took place in Bank of England stock. Home County and Corporation issues were steady, and a considerable number of Colonial inscribed stocks were marked ½ higher. The carry over rate on the latter was 6 to 7 per cent.

One or two incidents stood out prominently in the Foreign Bond market, the most important perhaps being the further considerable improvement in the price of the latest Russian loan. The opening quotation was about 6⅛ discount, but it improved sharply to 4⅞ discount, and after reacting slightly to 5⅛ dis., rose again to 4⅞ dis. It is said that dealings in the various Russian loans is now much easier than it was a short time back, a fairly ready market being found for securities that until lately could not have been realised at all except at a very heavy loss. Other issues of the country were also disposed to improve, and the advance may easily be carried further if the news from the Empire continues satisfactory. Spanish and Italian bonds were rather dull at the start, but were inclined to recover later in the week when Turkish Unified and Portuguese Three per Cent. also had small improvements. Japanese bonds were a good market throughout on investment buying, and Chinese continued to be picked up in a small way. Cubans were a little dull, and among Central American stocks Guatemalan lost a small part of their recent rise. Leading South American stocks were not much dealt in, Chilian, Argentine, and Brazilian loans showing only very slight changes; but, notwithstanding the adjournment of the La Plata meeting, Buenos Ayres cedulas again advanced as the majority in favour of the scheme was overwhelming, and at the next meeting the business will be finally settled. Peruvians opened dull, and after showing slight recovery again went back, as although the dividend on the preference stock was in accordance with general anticipations it disappointed the more sanguine operators who were looking for ¼ per cent. extra. Carry over charges were no higher than on the last occasion, and all the principal S. American stocks were continued at 5 to 7 per cent., together with Chinese and most of the Japanese issues. Japanese 1902 and the 4 per cent. sterling loan, however, still seemed a little scarce and were taken in at 4 to 6 per cent. Central Americans were done at 7½ to 8½ per cent., and on Peruvian preferred and ordinary the rate was 7 to 9 per cent., but the debentures were lent on at 5 to 7 per cent. The last-named charge prevailed on Russian 4 per cent., 1889, but on the new 5 per cent. loan as much as 7 to 9 per cent. was exacted. Turkish seemed scarce, being done at 2 to 4 per cent., and the rate on Spanish was moderate, at 4 to 6 per cent. Nearly all changes on the fortnight were upward, and Argentines showed gains of ¼ to 1⅛, while Brazilians were up ⅜ to 2¼. Chilians were ½ to 1½ better, Chinese rose ⅛ to ⅜, and among Central American stocks Colombians jumped up 2½, Guatemalan 5, and Venezuelan ½. In Japanese the improvement ranged from 1¼ to 1¾; Hungarians rose ⅞, Russians ⅝ to 1, Spanish, ¾, and Turkish Unified 1; the only important decline was one of ¾ in Cuban 5 per cent.

Interest in Home Railway stocks has apparently died down for the present, and the market has so far relapsed into a condition of idleness that there is little in the week's doings out of which to make a story. A fair inquiry was experienced at one time for Great Northern deferred, lifting it about £1, but selling followed, and the final price was down on the week. North-Eastern, however, was well supported, and Hull and Barnsley was inquired for on the improvement of its service between Hull and Rotterdam. Great Western, Lancashire and Yorkshire, as well as South-Western deferred and Brighton stocks, were all more or less up on balance, but North-Western gave way. Traffic returns were mostly satisfactory, but had very little influence one way or the other. The account arranged on Tuesday was said to be very small, but there seemed to be plenty of employment for all the money available, and contangos ranged from 8 to 10 per cent. as a rule, rising to 12 to 14 per cent. on South-Eastern deferred, while it was only here and there that the rate was down to that charged by bankers. Making-up prices reflected the demand which was experienced from investors throughout the fortnight, and in the whole list the only declines were in Central London deferred and District, which were both ½ down. North-Eastern rose 3½, Metropolitan 3½, and Brighton deferred, Chatham second preference, and South-Eastern preferred 3 each. Great Western ordinary and new stocks, Brighton ordinary, Chatham first preference, and South-Eastern ordinary all gained 2, South-Western ordinary and deferred put on 2½ and 2, and Hull and Barnsley, thanks to talk of a working arrangement with some unnamed company, gained 2⅝. Great Northern deferred and "A" stocks improved 1¾, Great Eastern 1⅝, and Lancashire and Yorkshire, North-Western, and Midland deferred 1, while the preferred of the last-named was ⅜ better. Caledonian ordinary rose 2½, and the preferred and deferred 1 and ⅞ respectively, but North British issues were only ½ up. Charing Cross, Euston, and Hampstead debenture stock has advanced 2½, and Great Northern, Piccadilly, and Brompton debenture stock 2 on the coming opening for traffic of the latter.

Dealers in Yankee Railroad shares got up quite a lively gamble in Missouri and Kansas shares last Saturday, and managed to keep them moving upwards for several days. Union Pacific shares were also taken in hand before the issue of the report, and then Atchison came in for a little support. Apart from these, and a short spasm of activity in New York Central, the market was far from active, and the usual tactics were adopted in vain. A brave display of strength was made at the opening each morning, which could not be maintained, owing to the lack of interest, and except in the few selected stocks the tendency throughout has been downwards. A bear attack on Milwaukee, Union Pacific, and Reading helped to increase the depression which set in on Tuesday, but Union Pacific rallied again when the report was issued, and some support was also forthcoming for Reading. The closing of accounts before the Thanksgiving holiday on Thursday, however, caused a fresh relapse, and the declines were accentuated by the fact that speculators are deserting the railroad market to try their fortunes with mining shares. Great Northern ore rights were sold freely, knocking Great Northern preferred stock down, but a recovery followed on the announcement that the shares, with ore land certificates attached, after the stocks sell ex-rights, on December 8, would be accepted as collateral for loans equivalent to the present market value, if there were no further decline in the meantime. It was also suggested that the United States Steel Corporation would buy these certificates, and an active demand resulted. In spite of all this, Great Northern preferred finished considerably lower, dragging Northern Pacific down with it. Pennsylvania, Reading, Union Pacific, and Louisville also fell back on the week, while Denver, Ontario, and Atchison followed in the wake of Misssouri and Kansas in showing improvements. Notwithstanding the large blocks of shares shipped to New York, the account to be arranged on this side was said to be "stupendous," and the demand for accommoda-

tion was certainly keen right up to the close of business on Tuesday. Carrying over charges were seldom less than 8 per cent., and frequently touched 9, and even 10 per cent., although in some cases an attempt to exact the higher rates led to the loans being paid off and procured elsewhere. Movements during the fortnight resulted in substantial recoveries in the majority of instances, the largest being a gain of 11½ in Milwaukee. Missouri and Kansas rose 8½, Union Pacific common 6½, and the preferred 2, Rock Island and Southern Pacific were 3¼ up, National of Mexico preferred issues 3⅛ and 2 better, and Baltimore, Chesapeake, Denver common and preferred, Erie ordinary, Ontario, Reading, and Southern put on from 1½ to 2½. Great Northern preferred, on the other hand, were 6 lower, and Northern Pacific and Pennsylvania showed losses of 1 and 1¼.

Grand Trunk stocks were not much affected by the traffic increase of £17,400, and, indeed, have been a quiet and somewhat neglected market all week, with the result that prices show only trifling alterations. Canadian Pacific, on the other hand, fluctuated pretty freely with a considerable business in them most days. Most of the improvement, however, was lost before the close, as the "bears" got the upper hand, through a story that settlers in the North-West were short of fuel, and were burning all they could lay hands on, including the timber for their houses to keep themselves from perishing with the cold. Amongst South African things Beira debentures improved and the debentures of the Mashonaland Company and the Rhodesia Railways declined on the victory of the Beira debenture-holders over the Mashonaland Company in the Courts. On the fortnight Canadian Pacific shares were 8¾ higher, Grand Trunk ordinary rose 1⅛, and the third preference ½, while the other securities of the latter company put on ¼ each. Contangos in this section were comparatively moderate at 7 to 8 per cent.

A big demand was experienced for Argentine North-Eastern ordinary and ordinary debenture stocks, and there was also a scramble for East Argentine stock, which carried it up pounds in a day, but otherwise the Argentine group was quiet, and inclined to be heavy. The far from cordial reception accorded to the new issue of the Bahia Blanca and North-Western company was reflected in a drop of 3 in the preferred stock, and a small decline in the ordinary stock of the Buenos Ayres and Pacific company, which guarantees the new shares. Mexican Railway stocks were taken in hand, and pushed up vigorously, but Interoceanic have moved in an uncertain fashion. The report just issued was considered good on the whole, but disappointment was expressed in some quarters, because nothing was said about any scheme for funding the arrears of preference dividend, and the shares gave way a little. They recovered when the traffic return was published, and it was said that recent sellers were now coming in again, but the support did very little more than wipe out the earlier loss. Interest has been reawakened in United Railways of the Havana ordinary stock, which had fallen rather into the background of late, and it was pushed up sharply, but dealers seemed a little doubtful of the genuineness of the improvement, and suggestions were made that the movement was made to enable holders to realise before the scrip offered for the purchase of the Matanzas line came into the market. Guayaquil and Quito bonds rallied to a moderate extent, and San Paulo ordinary was harder, but Antofagasta deferred fell back, and Paraguay Central debentures were also heavy and lower. Russian Railway bonds felt the effect of the recovery in Government loans, and closed from £1 to £2 up. Most Argentine things were better on the account, East Argentine and North-Eastern ordinary debentures being conspicuous with gains of 10½ and 8¾ respectively. The preference stock of the latter company rose 1½, Entre Rios ordinary and first preference put on 2¾ and 1½, and Buenos Ayres and Rosario ordinary and deferred, Buenos Ayres Great Southern preferred, and Bahia Blanca and North-Western preference improved from 1½ to 2. Argentine Great Western ordinary and preference, however, lost 4½ and 4, and Buenos Ayres and Pacific ordinary fell 3½, and the two preference 1½ and 1. Mexican ordinary and third preference were 2⅞ and 3 higher, but the first preference dropped 3½, and Mexican Southern second debenture stock was 1½ up. United Railways of the Havana gained 8½, and Guayaquil and Quito Railway bonds 2½, while San Paulo ordinary declined 5½, Paraguay Central debenture stock 4½, and Midland Uruguay ordinary and debenture stocks 2 and 1½. Money on most Foreign Railways ranged between 7 and 9 per cent., with very little to be had at the lower of these figures.

As in all others, business in the Miscellaneous sections was somewhat restricted by the carry-over, but these markets again presented a few interesting features. Bank shares were not very active, and showed little change among leading issues, but late in the week a distinct recovery took place in several Brewery stocks. Whether the decline in the securities has been carried too far it would be hard to say, but the extremely low range of prices now prevailing seems to be tempting the speculative. Here and there fairly important improvements were shown. All the issues of the City of London Brewery attracted attention, and there was also a little buying of Allsopp stocks. Watney, Combe junior issues were better, and a fair number of debenture stocks were 1 to 2 higher. Textile issues were not very animated this week and showed little change with the exception of Woolcombers shares, which jumped more than 10s. on statements that the trading for the year has been exceedingly satisfactory. Renewed excitement broke out in Cycle and Motor shares, resulting in a fairly general improvement in prices in which Daimlers, Darracqs, Humbers, Argylls, and Dunlops are prominent. Nitrates showed some irregularity, but the market was inclined to steady a little after the recent fall, and one or two shares showed improvement. Cements were still dull, and the shares of the building business of Spencer Santo were inclined to be heavy on the reduced interim dividend. The catering group was steady to firm, and a distinct advance took place in all the issues of Spiers and Ponds. We do not know that any improvement has occurred in the position of the company to justify the buying, but prices are undoubtedly very low. Whether they are tempting or not remains to be seen. Hudson's Bays have been a rather erratic market throughout the week, and after the fluctuating between 120 and 122 broke sharply to about 117 on realising by weak speculators. In view of the unwieldy "bull" account that has been built up in the shares a further reaction would not be at all surprising, but there is no doubt that some of the dealers are bent on sending the shares up again if that can be managed. Argentine land shares were also better, but Pekin Syndicate and other Chinese land shares do not seem particularly strong. Iron and Steel things were generally better, and Fraser and Chalmers shares rose on the good report and increased dividend. London Docks deferred stocks showed some improvement, and in the Shipping group Furness Withy again met with some support. Several Cable Construction shares showed weakness, although not closing at the worst, and in the Telegraphic section Anglo-American deferred was dull throughout the week. Carry-over charges ranged from 7 to 9 per cent. as a rule, but on some of the most speculative issues lately prominent the rate rose from 8 to 10 per cent., and occasionally even more. In the making-up list, Appolinaris shares showed a rise of 7/16, and British Electric Traction ordinary shares were up ½. Daimler Motor advanced 1 1/16, and the preference ⅝. Niger Company shares were ⅜ better, and Pease and Partners put on ½. Enfield Cycles were 4s. 6d. up, Humbers ordinary rose 7s., and Rovers 4s. 4½d. Allsopps stocks were ½ to 2 better, Hudson's Bays showed a rise of 10, Pekin Syndicates were 1⅞ better, and the deferred 15, while Shansi shares put on 2s. 9d. The shares of the Port Madryn Company gained 1⅜, and Anglo-American Telegraph stocks ⅜ to 1½. On the

other hand, several Nitrate shares were ⅛ to ¼ weaker, and Santa Rita were down no less than 2. Watney, Combe issues were 1 to 4 lower, Eastern Telegraph fell 1½, and National Telephone deferred 1.

Although very idle markets were good to-day, and the Consol account proved rather easier to arrange than had been looked for. Money, that is to say, was 5⅞ to 6 per cent., instead of being 6 to 6½ per cent. as most people expected yesterday. The rate stiffened a little towards the close, but nothing more than 6 per cent. seems to have been paid by anybody, and sometimes 5½ per cent. was quoted. This is for money into January. The talk being so much of a reduced Bank rate caused the price of the stock to harden to 87 for money, and steadiness prevailed everywhere except for Trunk stocks, which were a little off. Russian scrip rose to 4¾ per cent. discount, Allsopp's stocks continued to be shoved up, De Beers shares were better on the good report for the company's past year, and the only really weak market continued to be that for Kaffirs. Money was dear in the *coulisse* for the Paris monthly settlement and caused selling, but Rio Tinto shares were none the less higher.

THE WEEK'S PRICE MOVEMENTS.

BRITISH FUNDS, &c.—Rise: 2½ p.c. Annuities ¼, to 85¼-85¾, Bank of England 7½, to 275-280, Bank of Ireland 10, to 315-320, India 3½ p.c. Acct. ¼, to 101½-101⅝, ditto 3 p.c. Acct. ¼, to 93-93½, Local Loans ¼, to 97½-98. **Fall:** Exchequer Bonds 1909 ¼, to 99-99½.

MINING NEWS AND NOTES.

****Frank and unbiassed answers are given to all questions relating to Mines. Address Editor Mining Section and enclose* One Shilling *for each question asked. No bucket shop circular or advertisement should ever be responded to without first consulting the* Investors' Review.

The week opened with the carry-over, and as business was very slack the arrangements occupied the attention of members for the greater part of the morning. Contangos were much about the same as at the previous settlement, the variations here and there being very slight. Consolidated Gold Fields were continued at 6-7 per cent., East Rand, Rand Mines, Gold Trusts, and Randfonteins at 7-8 per cent., and Modderfonteins at 7½-8½ per cent., the general rate being 7-9 per cent. On the leading diamond shares rates were the same as before, 8-9 per cent. on De Beers and 6-8 per cent. on Jagers and Premiers. Rhodesians, including Chartered, were arranged at 7-9 per cent., which was also the charge on West Africans and Egyptians. The majority of West Australian shares were continued at 7-9 per cent., but on Golden Horseshoes, Great Boulders, Oroya-Brownhills, and Sons of Gwalia the rate was 6-8 per cent. Deep Leads shares were carried over at 8-11 per cent., Siberians at 10 per cent., Broken Hills at 8 per cent., and some American shares at 7-9 per cent.

Changes in South African prices during the account were not generally of much importance. The heaviest losses were ⅝ in Central Minings, ⅞ in City and Suburban, ¼ in South African Gold Mines, Tanganyikas, South Nourse, and Geldenhuis Estate, 7-32 in General Mining and Finance, 1/16 in Angelos, Frank Smith Diamonds, Glen Deeps, Jumpers Deep, Rietfonteins, Rose Deep, and Gold Trust, and 5-32 in Gold Trusts. There were three or four gains, such as ⅜ in De Beers deferred, 1/16 in Northern Coppers, 9-32 in Bankets, and 7-32 in Pigg's Peak. In the West African group Taquahs improved 1/16 and Abossos 3-32, but one or two others declined. Kalgurlis were the strongest amongst West Australians, with a rise of 1/16 and Ivanhoes advanced 9-32. Of the Deep Leads shares Loddon Valleys put on ½. The most active section, by reason of the outburst of gambling in it, was the Siberian, where Siberian Proprietary were hoisted as much as 5¼, Siberian Syndicates 1⅛, and Orsks 23-32. Copper shares were likewise strong, Rio Tintos moving up 2, Capes 1, Anacondas ⅛, and Tharsis 1 3/16.

For the new account business in the Kaffir Circus is, as usual, very sluggish. In fact, there are no buyers about, and as selling is continually going on in a quiet way prices are ever losing ground. Not even the controlling houses, so far as we can trace, are supporting their own specialities; they have neither the resources nor the encouragement to do this in the prevailing temper of the public. Owing to the dearth of business here many of the leading jobbers have migrated elsewhere, to the Siberian market in particular, in the hope of picking up a livelihood.

Rhodesians have been equally dull, the two hours' "boomlet" in these a little over a week ago being almost forgotten. Nor do we hear much now of the story that the forthcoming Chartered report will show an excess of revenue over expenditure. An attempt has been made now and then to revive it and to lift the price of the shares on the strength of it, but the effort is quite wasted. Rhodesians continue to dwindle all the same, relieved sometimes by a momentary rally in this share or that. For instance, Tanganyikas have recovered in the past day or two, but these shares are still feeling the effects of the recent debenture issue, which the underwriters find it extremely difficult to dispose of.

We need say nothing of West Africans nor of Rhodesians, for they are as drowsy as ever.

Nor is there much animation in West Australians, where the two strongest shares are still Kalgurli and Ivanhoe. These have been creeping upwards slowly but surely all the week, whilst the others have either been stationary or have gone back a little.

We say elsewhere something of the effort to lift Loddon Valleys and other Deep Leads shares, and need not dwell here upon the efforts of the speculators to generate a boom in them. Prices have risen and fallen in too violent a fashion to attract the cautious outsider. The Loddon Valley Goldfields, as we know, has entered the wash, and this week the following cable has been received from the general managers:—"No. 2 rise—Have cleaned up 4 ft. by 3 ft. by 6 in., obtained 2¼ dwts. of gold. Cement in wash shows gold. Owing to looseness, wash flow of water too strong; have ceased operations this point for the present. Pushing on drive turning north off No. 2 rise to enter into different points. Pushing on other points highest possible speed." The company's engineers, Messrs. Bewick, Moreing and Co., state that in their opinion no importance is to be attached to the flow of water from the wash on the first entrance, as this is usual, and they anticipate it will only require a few days for the flow of water to decrease to a point at which work can be resumed. But in spite of this opinion the shares fell sharply back after its publication, because, so some say, the market entirely misapprehended it. Part of the relapse was recovered later, but it is significant that Colonials are the readiest sellers and the most eager to take their profits. At the end the price has gone back again.

Gambling in Siberian shares has been unabated, and in this direction also we see desperate efforts made to start a boom. The excitement, however, is confined to insiders, and there are few signs that the public are in it. If they are wise they will keep out of it until greater progress has been made by some of the principal companies, and in any case it is impossible to sustain the present excitement for long.

Copper shares have been consistently firm all the week; Broken Hill descriptions have been well supported, and Indians have remained steady.

GENERAL MINING AND FINANCE CORPORATION.—In order to finance its subsidiaries, or, in the words of the officials, to make them independent of outside support, the General Mining and Finance Corporation is convening an extraordinary general meeting in Johannesburg on the 27th prox., in order to obtain the sanction of the shareholders to a considerable increase of capital—from £1,250,000 to £1,875,000—by the creation of 625,000 new shares of £1 each. These have been guaranteed by Messrs. G. and L. Albu on behalf of themselves, the Dresdner Bank, the Direction der Disconto-Gesellschaft, the firm of S. Bleichroeder, and the A. Schaaffhausensche Bankverein, Berlin, at the price of £1 5s. per share, and are to be offered to the shareholders in the proportion of one share for two at £1 10s. per share for a period expiring on January 10, 1907. It is surprising to hear that the company will want so much, for most of the subsidiaries are doing well, and it is still more surprising that the money should be asked for when the bosses are one and all declaring that the future is so lurid. We can well understand the reluctance of the directors to go direct to the public in the present unfavourable state of things. The more one dwells upon the transaction, however, the less explicable does it seem, for the Albu people have probably been the gloomiest prophets of all. Not many months ago they announced the closing down of the Aurora West, because of the alleged dark outlook, although this mine was near to the crushing stage. Do they contemplate restarting operations here in the near future? It is astonishing, too, that so inopportune a time should have been chosen for such a financial operation, and it is not in the least surprising that it has created a very unfavourable impression. No sooner was the announcement made than the price of the share promptly fell to 30s., the price at which the shares are to be offered to the shareholders. If they can buy any number on the market at such a figure, and even less, what inducement have they to take up these new shares? The directors while they were about it could easily have written a more explanatory and informing circular, but to send out a curt one at the present juncture is an error from which the entire market will suffer. How is it possible under existing circumstances to spend so much fresh capital? If we look up the last balance-sheet of the General Mining and Finance Corporation we shall find that its liquid assets, including £323,681 in actual cash, were over three-quarters of a million, enough to last for years to come any of the subsidiaries likely to need assistance. The fact that German finance institutions are given the chance of reaping a big harvest is not the least of the objectionable features from a popular point of view.

AYRSHIRE GOLD MINE AND LOMAGUNDA RAILWAY COMPANY.—Though the 60-stamp mill of this Rhodesian company ran uninterruptedly during the past financial year, the results are not very pleasing from the shareholders' point of view. A larger tonnage was dealt with, but the production was less, only 34,236 ozs., against 41,066 ozs., the realisable value falling from £153,143 to £129,280. Thus the ore was of poorer value than in the previous year, and the results are the more discouraging as the directors effected a further reduction in working costs, which were 14s. 11½d. per ton milled, compared with 15s. 0½d. At the same time, the percentage of extraction of the gold contents of the ore was slightly increased. Other revenue consisted of £2,023 from rents, £1,883 from interest, and £102 from transfer fees, making a total of £133,289. As mine development redemption took £27,535 and depreciation of machinery £13,768, the profit is only £7,339 against £23,930. Debenture interest, however, requires £13,750, and debenture premium £6,250, so the result is the heavy loss of £12,661. As a credit of £10,180 is brought in, the debit is reduced to £2,480, by no means a flattering state of things for a company of which great things have been predicted. This cannot be attributed to an insufficiency of labour, but to something more serious, and the improvement that is needed to make dividends possible is certainly not promised in present mine indications. The consulting engineer says:—"The prospects of the mine at this date are far better than at the date of last year's report." This is not very promising. As a good deal of the development work has been done in disturbed ground, it has not been possible to open up fresh reserves equal to the tonnage crushed in the mill. It is consequently still doubtful if a temporary stoppage of the mill can be averted. This diminution is attributed to the disturbance of the reef between the third and sixth levels, but it is said that encouraging results have been obtained on the eighth level, and it is hoped the reef will be found to resume its normal character at lower depth. Such a hope can be but a slender one, for few Rhodesian reefs improve in depth.

H. E. PROPRIETARY.—Shareholders are not likely to be delighted with the showing made by the directors for the past financial year, for the results can only be described as miserable. No profit and loss account is yet rendered, after all these years, and according to the income and expenditure account in the balance-sheet the revenue in South Africa and London amounted to £6,017, mainly from interest and contango loans, which is the principal business the company still seems to be doing. As the expenditure took £4,391 we may say there was a tiny profit of £1,626, which reduces the previous debit of £3,475 to £1,848. As, however, the directors had to write off £7,019, representing the option and development expenditure on the Lawrence Block—in other words, a loss—there is now a heavy debit of £8,867 to be charged to future profits, if earned. A brilliant result this to justify the shares standing at their present comparatively low premium! During the year the company floated the Murchison Free State Syndicate, but we are not impressed with its prospects. After this achievement it was decided to give attention to prospecting operations on the Blue Jacket properties, but sufficient work has not yet been done to enable conclusions to be arrived at regarding their value. An interest has been acquired in an option over a block of copper claims to the south of the boundaries of the Magato Concession, and it is proposed to undertake the active investigation of these during the coming year. An interest has actually been taken in that oft-reconstructed company, the Lisbon-Berlyn, and we fear the directors will repent this. Cash resources are still fairly ample, but we cannot see how they can be replenished in the early future.

NEW VAAL RIVER DIAMOND AND EXPLORATION COMPANY.—A summary of the chairman's speech at the confirmatory meeting of the New Vaal River Diamond Company, held in Kimberley on Tuesday, has been cabled over. It is intended, he declared, to throw open for the present four square miles of ground for the purpose of leasing it to large companies, syndicates, and individual diggers, one square mile to be allotted forthwith to a syndicate formed in London, with a working capital of £25,000. They are to pay a yearly rent and a royalty on all finds. No decision has been arrived at as to the size of the area on the new discoveries, which will be worked by the company itself. "If the property is largely worked," said the chairman, "and the results are only one-quarter as good as in prospecting, the profits accruing to the company will be very large."

OROYA-BROWNHILL COMPANY.—Simultaneously with the declaration of an interim dividend of 4s. per share the directors of the Oroya-Brownhill issue a circular descriptive of the developments on the new Black Range property, and shareholders will find it rather encouraging. This property is opening up in so satisfactory a manner that the directors have ordered the erection of a 20-stamp battery and anticipate that this will be running within six months. In May last, it may be recalled, Mr. Trewartha James estimated that the tonnage in sight amounted to 44,000 tons, of an average value of about 17 dwts. or about 72s. per ton. Mr. Hoover, of the firm of Messrs. Bewick, Moreing and Co., puts the probable working costs at 30s. per ton, so that after allowing for loss in extraction a profit of 36s. per ton should be secured. When, however, a railway is connected with the mine costs may be further reduced by 3s. per ton. Developments are considered to be very hopeful. The second level at a depth of 150 ft. has been commenced up, and the ore reserves now may be double those given by Mr. James. At the present moment the third level, 230 ft., is being opened up; the reef has been proved in a winze 72 ft. below the level by means of boreholes, and the assays are good, though assays, of course, are not always reliable. The company is still working the old famous Kalgoorlie mine, and this promises to develop good-class ore, the rich Oroya chute having been found to extend much further than was originally believed.

WESTRALIA MOUNT MORGANS GOLD MINES COMPANY.—The directors have just issued the report for the year 1905, and a distressing one it is. Gold won in the twelve months realised £67,416, and the total income was £68,272. Expenditure, however, including £25,078 for depreciation, amounted to £103,852, so the loss was £35,580. At the end of 1904 there was a balance of profit of £9,897, but this has been applied in reducing the development account to £2,520. In October of last year the directors invited the larger shareholders in England to meet and confer with them, with the result that an informal committee was appointed to discuss with the board the position of the company. At that time the reserve of ore in sight was small, and not rich enough to yield a substantial profit, and the company had no funds wherewith to pursue a policy of development

advocated by Mr. Nicholson. The directors were of opinion that immediate steps should be taken to raise further capital, and a scheme was prepared so that the matter could be brought forward without delay if necessary. In February last Mr. Morgans cabled that it was absolutely necessary to obtain further capital, and the shareholders were called together, when the necessary resolutions were passed for the creation of £32,500 of preference shares of 5s. each, and most have been issued. Latest returns from the mine are more promising than they have been for some time.

Talisman Consolidated.—A very lengthy report is issued for the half-year to August 31. Development was 3,296 ft., but no shaft sinking was done in the term. Important results of the work have been the finding of a chute of ore in the No. 10 level, Dubbo section; the discovery of the east branch of the lode at No. 11 level, Bonanza section, carrying high-grade ore; and the finding of a good chute of ore in the extension of No. 12 level in the latter section. As regards ore reserves, the following is said to be a fair estimate of the quantities and values of the ore in sight:—Talisman block, 23,498 tons, valued at £2 7s. 4d. per ton; Bonanza block, 42,916 tons, value £3 16s. 4d. per ton; total 67,114 tons of an average value of £3 5s. 10d. per ton, this estimate not including a block of ore in No. 2 north stope, No. 12 level, containing 3,391 tons, value 19s. per ton, which would make the total 70,505 tons, value £3 3s. 7d. per ton. Probable ore not taken into account, because only as yet proved on one side of it, is:—Ore above and below No. 10 level on the new chute in the Dubbo section; ore below No. 11 level on the east branch, Bonanza section; ore in north end of No. 12 level, Woodstock section, and ore above and below No. 12 level in the new chute, Bonanza section. So far the ore exposed in these chutes is narrower than in the big stopes on the Bonanza chute above the No. 11 level, but it is safe to assume that altogether a two years' supply of ore is assured. The tonnage treated was greater than during the previous half-year, but the grade of the ore was lower. In the six months 24,563 tons were treated, yielding 142,375 ozs. of bullion of a value of £70,802, averaging £2 17s. 7d. per ton. The tonnage was greater than in the previous half-year, but the grade was lower. As the total expenditure at the mine was £36,082, the working profit was £34,720. Shareholders must not yet conclude that the future of the mine is absolutely assured, nor that large dividends will be paid. Prospects are still uncertain. In the Talisman section the shoots of ore below the No. 11 level are getting smaller, while not on the whole equal in value to the average milled. The new makes of ore in the southern extensions of levels Nos. 10, 11, and 12 are narrow, so far as proved, although of good quality. "Expenditure on development will have to be largely increased as soon as possible," is the significant intimation of the general managers.

Company Reports and Balance Sheets.

**** *The Editors will be much obliged to Secretaries of Joint Stock Companies if they would kindly forward copies of Reports and Balance-sheets direct to the Office of the* Investors' Review, *Norfolk House, Norfolk Street, W.C., so as to insure prompt notice in these columns.*

Canadian Northern Railway Co.

A considerable addition was made to the mileage operated during the year ended June 30 by the completion of the line to Prince Albert and the main line to Edmonton, and with leased lines the company now owns 2,482 miles. Thanks in great measure to this extension the passenger earnings rose by $398,703 and freight traffic gave $1,274,402 more, the principal increases in tonnage carried being 179,596 tons in grain and flour, 45,031 tons in logs and lumber, and 99,050 in general merchandise. Gross earnings from all sources showed a satisfactory advance of $1,713,544 at $5,903,756, but of this $1,030,004 was absorbed by expenses which came to $3,674,733, the proportion of expenses to receipts being 62.24 per cent. compared with 63.12 per cent. a year ago. Maintenance of way and structures took $250,431 and maintenance of equipment $174,895 more, while traffic expenses rose by $556,757 and general expenses by $47,920. Nett revenue was consequently $683,540 higher at $2,229,023, and as fixed charges required $380,669 more at $1,509,448 there was a substantial surplus of $719,574 to be added to the amount brought forward, making a total of $1,628,110. The report states that a very large increase in traffic has been reaped from the movement of grain and cattle and from the farming and immigration business generally, but the directors find more cause for congratulation in the development of the coal, iron ore, and other mineral business all along the line. In the course of a few months it is expected that iron ore will be shipped from the Atikokan Range to Port Arthur, where a plant to manufacture iron is now under construction, and the owners of the ore also anticipate being able to ship large quantities to the United States, so that the traffic of the line should benefit materially. Realising the importance of securing entrances into the cities of Ottawa, Montreal, and Quebec, the control was acquired of the Great Northern Railway of Canada, the Chateauguay and Northern Railway, and the Quebec, New Brunswick, and Nova Scotia. These companies have since been amalgamated under the name of the Canadian Northern Quebec Railway Company, and arrangements are being made for the permanent working of the lines as part of the Canadian Northern system. For the first three months of the current year the gross earnings have exceeded those of the corresponding period of 1905 by $691,600, and the directors consider that with the increased movement of immigrants and a larger grain crop the business should show a further large expansion. Provision has been made to meet the increased traffic by the purchase of rolling-stock of all kinds. During the year £1,240,000 of 4 per cent. perpetual consolidated debenture stock was issued, making a total of $10,901,333, in addition to which there are bonds of $24,585,137 and car trust equipment obligations of $4,180,916.

Interoceanic Railway of Mexico (Acapulco to Vera Cruz), Limited.

The greatly improved displays lately made by the old Mexican Railway Company no doubt prepared the shareholders of this undertaking for something satisfying on account of the year ended June 30. They are not to be disappointed, as the report just issued gives evidence of substantial progress in all branches of the company's business, and it is quite startling to find that the stage has been reached where the directors can propose a dividend on the preference shares. These have had no distribution for something like 15 years, and now that the continued provision of all prior charges may be regarded as reasonably certain the board will no doubt formulate a scheme for funding or otherwise dealing with the heavy accumulation of arrears. During the period under review the company earned gross $6,460,330, being an increase of $374,223, but more surprising than the increase in revenue is the important decline of $181,277 in the working expenses to a total of $4,574,482. This is unexpected, because it was understood, after the line passed under the control of the National Railroad Company of Mexico, that the expenditure on maintenance and betterments would be on an exceptionally heavy scale. It is, however, to be assumed that the very exceptional amounts laid out in the previous year put the system in such a condition that future expenditures under these heads will be on a more normal scale. The average rate of exchange worked out at 24.67d. per dollar against 23.75d. during the preceding year, and although this helps the receipts when converting into sterling, it also has the effect of raising the working charges. The number of passengers carried was larger by 144,151, and the receipts improved by $62,825, while an advance in the goods carried of 68,176 tons brought in an additional revenue of $213,811. Important increases were shown in coal and coke, fruit and vegetables, stone and bricks, barley, cotton, hardware, and groceries, but there was a smaller tonnage of sugar, sand, lime and cement, and firewood. The actual production of sugar was larger than in the preceding season, but owing to the depression in European markets the export of this commodity was not so heavy as expected, and consequently the producers retained a considerable amount in their warehouses. The erection of kilns nearer to the city of Mexico than those situated in the company's districts accounted for the smaller quantities of sand and lime carried, and the tonnage of firewood was affected by the considerably diminished production of the forests near Atotonilco and San Martin. Converted into sterling the nett receipts produced £196,360 compared with £138,831, and a further amount of £1,809 came in from interest and transfer fees, making a total of £198,169. Rent of the Mexican Eastern Railway and interest on the prior lien and 4 per cent. first debenture stocks requires £67,995, and an interim payment of 2¼ per cent. on the 4½ per cent. second debenture stock drew off a further £25,875. The directors now propose to complete the dividend on this second debenture stock and to pay the full 7 per cent. on the "B" debenture stock. A sum of £14,647 is then placed to the credit of preferred shareholders in suspense for the purpose of liquidating a similar amount now standing to their debit, and a dividend of 4s. per share on account of arrears is paid. £8,000 goes to special reserve for the redemption of 5 per cent. prior lien debentures and a balance of £2,915 is carried forward.

Cordoba and Rosario Railway Co., Limited.

For the second year in succession this company has to report a small decrease in its gross revenue, which is surely a novel experience for an Argentine railway. Fortunately the drop is quite unimportant at $17,452 on a total of $2,544,007, and as the working expenditure was down $40,951 to $1,453,443 the nett revenue is better by $13,499 at $1,090,455. The actual volume of passenger and goods traffic showed an increase compared with the previous year, and the receipts from passengers were larger by $31,713, but the goods revenue fell off $7,358. What the company calls foreign traffic amounted to 238,939 tons, transit traffic came to 211,442, and local traffic to 149,351 tons. Compared with the figures of the previous year, the receipts show increases of $90,174 from foreign traffic, and $83,354 from transit traffic, but there was a decrease of no less than $180,886 from local traffic. The principal items showing increased tonnage were sugar, firewood, bricks, flour and bran, railway materials and timber and apart from cereals the only decrease was in minerals, of which very small quantities were moved. When the harvest was being reaped it was thought to have exceeded that of any previous year, but on threshing it was found that the yield of grain was only 60 to 70 per cent. per acre as compared with that of the previous harvest. This was due to late frosts, heavy rains, and fogs, which up to the time of reaping were not considered to have affected the grain to any considerable extent. The cereal traffic was also seriously curtailed by the conflict which arose in February last between the Rosario Port Company and the exporters of cereals in consequence of the Argentine Government having authorised the Port company to charge heavy royalties. The exporters practically boycotted the Rosario Port and shipped from places outside the radius of the Port company's concession, and since Rosario is at present the railway's only outlet for cereal traffic it was

placed at a disadvantage. The directors hope that in due course the concession granted to the Port company will be rescinded, and that the Port works will be taken over by the Government. The latest advices with regard to the coming harvest are that the wheat and linseed are in a very good condition, and that the area under cultivation is about the same as last year. In sterling the balance of revenue for the year was £95,869 or £680 more than in the previous twelve months, and £334 came in for transfer fees and interest, making £96,203. One year's interest on the 4 per cent. debenture stock and an interim payment of 3 per cent. on the 6 per cent. debenture stock have been already provided, and the directors now propose to pay the final 3 per cent. on the 6 per cent. issue and the full 4 per cent. on the income debenture stock. A sum of £6,004 is then transferred to a special reserve in accordance with the scheme of arrangement of 1895, and a dividend is recommended of £4 2s. 6d. per cent. on the 6 per cent. first preference stock, to meet which £735 must be taken from the amount standing to the credit of first preference stockholders, reducing it to £485.

URUGUAY NORTHERN RAILWAY CO., LIMITED.

Even those lines serving the least fertile portions of the Argentine Republics are making progress, and the gross income of this company for the year ended June 30 of £19,577 is not only the largest total since the line was opened, but shows an increase of fully £2,000 compared with the previous year, when traffic was interrupted for about four months by revolution. At the same time the expenditure was reduced by £3,436 to £14,991, so that the operations resulted in a profit of £4,585 instead of a loss of £918. A further sum of £19,000 was received for Government guarantee and £2,016 was brought forward, making £25,602. Interest at 3½ per cent. on the debenture stock requires £14,942, and the holders are also entitled to two-thirds of the nett profits, amounting after deduction of income-tax to £2,904, so that their total distribution is raised to £4 3s. 7d. per cent. The interest on the prior lien debenture stock next takes £1,472 leaving £6,283, and the directors are therefore able to pay 2 per cent. or 1 per cent. more on the preferred stock carrying forward £1,533. Capital expenditure during the year amounted to £1,195 and included the company's proportion of fencing-in part of the line, the erection of a goods shed at Tres Cruces, and the purchase of 12 goods wagons. The directors regret that as yet no further compensation for the suspension of traffic during the last revolution has been obtained from the Government, but negotiations are still proceeding.

SALVADOR RAILWAY CO., LIMITED.

The little war between Salvador and one of the neighbouring republics slightly retarded this company's progress during the year to June 30, and it is fortunate that the trouble was brought to a speedy conclusion by the intervention of the United States and Mexican Presidents. The gross revenue for the twelve months was £127,501, a drop of about £1,800 against the previous twelve months, chiefly due to a shrinkage in imports immediately before the war, merchants naturally holding back orders for goods until normal conditions were restored. The rate of exchange was also rather less favourable, being taken at 127 per cent. premium against 125 per cent. The working expenses were £56,179 against £55,058, the mobilisation of troops causing increased expenditure for maintenance and fuel. Under the terms of the concession only half of the usual tariff rates can be charged to the Government before war is declared, while during the progress of hostilities troops and materials have to be transported for nothing. The nett revenue is therefore £3,125 less at £71,121, but £9,601 was brought forward and £1,130 came in from exchange, interest, and profit on investments, making a total of £81,852. After meeting the service of both classes of debentures there is a surplus of £33,144 against £31,015, and the directors have decided to extinguish at once an amount of £11,900 which accrued during the preceding six years in connection with the redemption of prior lien debentures. So long as revenue was insufficient this liability was met by borrowing from capital account, but its reimbursement from revenue will enable distributions of profits to be made without the handicap of arrears of debt. After doing this it is possible to pay the full dividend of 12s. on the preference shares against only 6s. paid a year ago, carrying forward £6,244. The directors report that the Government, as in previous years, continued to meet punctually its obligations to the company.

DELHI, UMBALLA, KALKA RAILWAY CO., LIMITED.

The accounts of this company cover a complete twelve months to June 30 last, and during this period the revenue on the main line amounted to Rs. 20,22,235 compared with Rs. 19,22,831 in the preceding year, being an increase of Rs. 99,404. The quantity of goods carried was 356,208 tons, an improvement of 71,540 tons over the previous year, notwithstanding that the total for the latter period was the highest then recorded. Considerable increases again took place under the heads of general merchandise and coal, but the coaching traffic showed only a very small improvement. The working expenditure is at the fixed rate of 48 per cent. and the nett revenue comes out at £67,007 compared with £63,555 in 1904-5 and £59,829 in the year before that. An interim dividend for the opening half of the financial year of 3 per cent. was paid in June, and the credit to nett revenue, after providing debenture interest, Indian income-tax, and interest on capital advances is £38,140, including £5,721 brought forward. The directors now propose to pay a further dividend of 3 per cent., together with a bonus of ½ per cent., making 6½ per cent. against 6 for the complete year, and carrying forward £7,427. As the shareholders are aware, the Kalka-Simla railway which was constructed by the Delhi Umballa has been sold to the Secretary of State, the terms finally arranged being a payment of £300,000 cash, with interest at 3 per cent. per annum from January 1 until date of payment. There has been more delay than anticipated in getting the transaction settled, but the contract was completed on November 14, and the board hopes that the purchase price will be received and the transfer of the line completed at an early date. The Secretary of State having agreed to purchase the line from January 1 last, the company is not affected by the subsequent transactions, but as the business has not yet been finally settled the accounts for the two half-years to June 30 are now submitted to the shareholders. The gross earnings for the year were Rs. 7,80,504, and the working expenses, excluding Rs. 80,090 being the proportion of maintenance chargeable to capital, amounted to Rs. 3,37,074. The nett earnings for the year are therefore Rs. 4,43,430, and the interest on the Secretary of State's advances were very little higher than this revenue, being Rs. 4,58,647. The nett earnings amounted to 2.55 per cent. on the total capital outlay on the line, and are considered very promising for a railway newly opened for traffic. The results have been attained notwithstanding that the Government maintained the tonga service running in opposition to the railway, and also did not give the railway the carriage of the mails. All the same the shareholders were probably wise to accept the offer made by the Government, although this involved some loss of capital, as the cost of constructing the line was much heavier than originally contemplated, and under the best conditions a good many years must probably have elapsed before the business would have been sufficient to give the shareholders a fair return on the capital involved.

SOUTHERN PUNJAB RAILWAY CO., LIMITED.

A further large increase took place in this company's gross revenue for the half-year ended June 30. Including small receipts for adjustments on account of the opening half of 1905 the income from all sources was Rs. 22,41,225 compared with Rs. 18,15,745 in the corresponding period. That is an improvement of Rs. 4,25,480, and it is worth noting that a year ago the accounts exhibited a gain of Rs. 4,77,668; in other words, the traffic has improved by over 9 lakhs within two years. Most of the improvement continues to be in the carriage of goods, which yielded an income during the period under review larger by almost 3 lakhs, but coaching traffic also showed a substantial gain, being Rs. 1,26,488 larger. The working charges are at the fixed rate of 52 per cent. of the gross receipts, and therefore took Rs. 11,63,958 against Rs. 944,187, and after providing also Rs. 1,479 on account of previous half-years, the balance of earnings is rather more than 2 lakhs larger at Rs. 10,75,788. Converted into sterling these receipts produced £71,719, which other revenue raised to £74,674, and after providing expenditure in England and India, income-tax, and interest on debenture stock the balance still left is £60,885. Of this money the Secretary of State is entitled to £21,890, leaving the company's share at £38,995, and as £36,763 was brought forward the total for disposal is £75,758. That compares with £62,866 for the corresponding period, and the directors propose to increase the dividend from 4¼ per cent. to 5¾ per cent. per annum, requiring £26,565, and leaving £49,193 to be carried to next account. Capital expenditure on the main line and Kaithal branch was only £1,439, but on the Ludhiana extension the outlay was £39,406, bringing the total to date to £506,982. The nett earnings received to June 30 on account of this extension were £8,647, and this has been credited to capital account. The rebate due from the North-Western State Railway will also be credited to capital, but the earnings for the current half-year will belong to revenue.

ROYAL BANK OF SCOTLAND.

The operations of this bank for the twelve months ended October 31 were again of an eminently satisfactory nature, and the directors return the gross profit, after deducting rebate and income-tax and providing for bad and doubtful debts, at £408,690. This is an increase of £2,605 against the previous year, and as there was a small decline to £165,909 in the management charges the nett profit is about £3,000 larger at £242,781. The directors bring into the profit and loss account the rest or reserve fund, and this now amounts to £933,440 compared with £900,724 in consequence of the contribution made to the fund a year ago. With this added the total credit is £1,176,221, and after writing off £6,000 or £1,000 less from bank buildings the dividend and bonus of 10 per cent. are again provided, leaving the rest at £970,221, meaning that the addition to this fund from the profit of the year is £36,781. We may here note that the Earl of Elgin, the Colonial Secretary, retains his position as Deputy Governor. This, we suppose, is not considered an ordinary directorship. On the whole, the changes in the balance-sheet are unimportant, there being an increase of less than £2,000 at £998,348 in the note circulation, while the deposits, with accrued interest, are about £60,000 larger at £13,666,322. Drafts outstanding show an increase of rather more than £31,000 at £498,357, while the acceptances and endorsements appear at £665,160 against £547,313. The paid-up capital is £2,000,000 and the rest £970,221 as intimated, these figures with the final dividend and bonus amounting to £110,000 still to be paid, making up a balance-sheet total of £18,908,409 against £18,660,453. The actual cash balance of £1,431,307 is larger by £41,074, and as is the custom nowadays with all banks, a much heavier sum is lent in London at

call and short notice, the total being £413,362 larger at £3,010,297. British Government securities are about the same £1,480,020, but Indian and Colonial Government stocks, Bank stock, and various British railway debenture and corporation loans have been reduced from £840,815 to £703,179. Other securities, consisting of Foreign Government stocks, Bank of Ireland stock, and Indian Railway stocks, &c., are about £40,000 higher at £542,514. Bills discounted are a good half-million lower at £3,807,913, but advances on cash, credit, and current account have been increased by £379,558 to £5,182,442. Loans on stock and securities for short periods show a moderately large reduction to £1,463,588, and the sums due from banking correspondents and other customers of £665,169 offset the similar item on the other side. Bank buildings are a little higher at £282,366, despite the writings off, and the property yielding rent also shows a small rise to £214,624. Freehold property in London partly occupied by the bank and partly yielding rent remains at the old figure of £125,000.

Colonial Bank of Australasia.

This modest Australian bank earned £19,579 nett in the half-year ended September 30 last. Adding in £4,195 brought forward, the total free balance was £23,774, out of which dividends at the rate of 6 per cent. per annum are to be paid on both the preference and ordinary shares, this meaning a rise of 1 per cent. per annum on the ordinary. In addition £10,000 has been carried to the reserve fund, leaving £596 to be carried forward. With the present addition the reserve will now amount to £100,000 against a paid-up capital of £439,280. The aggregate of the balance-sheet is £3,986,461, most of which is represented on the liabilities side by deposits which aggregate £2,915,563, including £509,702 of Government money. The note circulation was £11,035 at the date of the balance-sheet, and among the assets the one item of prominence is £2,461,727 representing bills discounted and other advances exclusive of provision for bad and doubtful debts.

Fraser and Chalmers, Limited.

This well-known undertaking, whose principal business is the manufacture of mining machinery, and which is blessed with Sir Julius Wernher as its chairman, seems to have found the year to June 30 a very profitable one. Although there was again no revenue from the American Allis Chalmers Company, the nett trading profits came out at £68,816 or £18,860 more than in the previous year. A portion of this profit, however, is due to the receipt of payment for some large contracts executed during 1904-5, but only appearing in the previous accounts at cost, as delivery had not been completed. Interest, discount, exchange, and transfer fees produced £4,945, making £73,761, against which the London management expenses are £16,531, depreciation required £9,805, and other charges, including debenture interest, £1,562, leaving the nett balance at £45,863. The company brings forward the remarkably large credit of £86,339, raising the total available to £132,202, from which the full dividend on the preference shares and an interim payment of 4 per cent. on the ordinary shares have been already met. It is now proposed to pay a final 6 per cent. on the ordinary shares, making 10 per cent. in all, or 3 per cent. more than last year, which entitles the preference shares to a further 2½ per cent., bringing their total dividend to the same amount, 10 per cent. The credit then carried forward is slightly increased to £88,102. Additions to the Erith works during the year cost £17,968, and the directors say that the expenditure has much improved the productive capacity, the output for the period under review being the largest since work was commenced. The current year has opened well with a good supply of work on hand, and a fair start has been made in the matter of steam turbines. After allowing for depreciation, these works now have a balance-sheet value of £41,165, and £1,500 written off the patents from the year's revenue reduces their value to £1,500. Patterns and drawings are entered at £1,000, and real estate, buildings, plant, &c., in London and at branches are worth £41,971. Rather heavy sums are owing to sundry creditors and on bills payable, but they are more than offset by debtors £128,986, and the company has stocks of machinery, merchandise, &c., to the value of £255,436. Goods in transit are down for £37,271, and in addition to an investment of £20,000 the cash balance exceeds £99,000. Compared with the previous balance-sheet these items show important changes, there being a heavy drop in the liabilities and also in the amount of stocks carried, all of which is to the good. The increase in the cash balance is no doubt partly due to the sale of 8,400 Allis Chalmers shares at a price in excess of the sum at which the entire holding of 15,000 shares originally stood in the books, which we gather to have been about £93,000. This leaves the remaining 6,500 shares at the merely nominal figure of £100. The excess mentioned apparently amounted to £4,186, and this money has been carried to a capital reserve account, being the only accumulation possessed by the company, apart, of course, from the important undivided balance.

Midland Iron Co., Limited.

We learn from the report of this enterprise for the year to September 30 that the demand for its products has been fairly good, but considerable fluctuations seem to have taken place in the prices of raw materials. Under the circumstances the directors think the profit of £6,935 is a satisfactory one, the revenue being arrived at after providing debenture interest and all other charges. Balance brought in was £614, making £7,549, from which the preference dividend takes £1,187 and the 7½ per cent. proposed on the ordinary shares £1,875. A sum of £2,775 is then allowed for depreciation of plant, £1,000 is allowed as special reserve for doubtful debts, and the credit carried out is about £100 higher at £711. Expenditure on plant, &c., during the year was £2,775, and an equivalent sum was allowed for depreciation, leaving the property account at the old figure of £49,976. The reserve fund remains at £7,500. The company is rather poorly supplied with liquid resources, but the stock-in-trade with loose tools, &c., is put down at £25,358.

Wall Paper Manufacturers, Limited.

This is one of the combines or trusts which have lately been the subject of questions in the House of Commons, and the moderate relapse in profits which has taken place for the year ended August 31 may not, therefore, be unwelcome. The set-back, if not serious, is fairly substantial, but we suppose revenues cannot be always moving up. Trading profit, after making provision for bad and doubtful debts and depreciation of £30,000 was £228,573 and £335 came in from transfer fees or £228,908 in all. Compared with the preceding 12 months the total shows a reduction of £14,319, but this was very nearly made good by an improvement of £12,871 at £128,385 in the balance brought forward, so that the disposable sum is £357,293 against £385,741. Debenture interest for the year was £39,844, income-tax took £4,490 and £24,903 was required for the interim dividend on the preference shares. The next debit in the profit and loss account is one that excites our curiosity because the chairman was inclined to touch the subject very lightly at the annual meeting on Thursday. The item consists of the special appropriation for loss on closed branches and the liquidation of Page, Arnold, and Co., £50,000. No reference to this serious business occurs in the report and it naturally causes some anxiety to the deferred shareholders because the provision of so much money removes them further from a first dividend. Part of the loss was caused by the closing down of branches owing to the concentration of business, but although questions were asked by proprietors we do not gather that the chairman mentioned how much of the deficiency was due to this cause and how much to the liquidation of Page, Arnold, and Co. It is at times like these that a proper auditors' report should be drawn up, like the one, say, now furnished by the Calico Printers. The real position of affairs could then be ascertained. After providing the £50,000 the balance still left is £238,056 and the directors level things up by passing over the reserve which last year received an equivalent sum. Balance of the preferential dividend having been provided the directors again pay 8 per cent. on the 10 per cent. ordinary shares and carry forward £125,503. Reserve fund remains at the old figure of £180,000 which is a poor set-off to the property account £3,313,780 and the directors are undoubtedly wise not to attempt even the full ordinary dividend let alone anything on the deferred shares. Additional capital expenditure for the year was £62,340 and the £30,000 allowed for depreciation is surely absurdly small. But as before remarked the company is pretty well placed in other ways. An important reduction from £92,654 to £43,623 has occurred in sundry creditors, as last year this item carried the sums owing on account of the purchase of the lincrusta business of Fredk. Walton and Co. which have now been satisfied by issues of shares and debenture stock. Cash balance has fallen sharply to £33,478 and bills receivable are down from £132,748 to £120,755, but debtors have increased by over £37,000 to £337,781. Investments have been realised to the extent of nearly £40,000 bringing them down to £301,497 due, we suppose, to the heavy capital outlay, but stock-in-trade is rather higher at £533,995.

Ilford, Limited.

The shareholders of this well-known photographic materials business have no real reason to be dissatisfied with the report for the year ended October 31. The steady fall in the dividend may cause some of them to think that the proposals of the Eastman Kodak Company for the purchase of the business ought to have been accepted, but proper consideration of the position should show them that the company did much better to maintain its independence. It is quite true that the American concern, which skipped out of England in order to dodge the income-tax payments, has been making very large profits, and its common stock stands at a very substantial premium; but it must be remembered that the fine revenues earned are probably made at the expense of the luckless Yankee consumer, and that if the company had been successful in capturing the Ilford business the buyer here might have had the screw put on in similar fashion. By retaining its business the English company has made sure of that healthy condition which is necessary in all business enterprise, and if the shareholders are suffering a little they have the satisfaction of knowing that the photographic business of this country has not passed into the hands of the Americans. In the year to October 31 sales of the company's products again showed a satisfactory increase, and the output was considerably larger than in any previous year of its existence. Competition, however, continues keen as ever, and the effect of the greater turnover on the profit and loss account was very slight. Nett income from trading was £48,741 or just £298 more than in the previous year, and after adding £2,622 for interest, rents, &c., and £64 for transfer fees the total credit is £51,427 against £51,032. The total charges, including £3,746 for repairs and depreciation and the trifle of £28 for bad debts, came to £23,018, leaving the nett profit at £28,419. The sum brought forward was £1,258, making £29,678, from which the directors provide the preference dividend and 6 per cent. on the ordinary shares, being ½ per cent. less, writing off £4,000 from the goodwill account, and carrying forward the substantial sum of £2,878. The goodwill account will now be reduced to £222,000, and although this is still a very large sum there

cannot be much cause for complaint while the directors consider the reduction of this item before the question of dividend. Moreover, there is a reserve fund of £44,000 and a bad debt reserve of £300—a small sum truly, but evidently sufficient, judging by the smallness of bad debts for the period under review. Trading accounts are a long way favourable to the company, and the financial position generally can be considered fairly sound, as the cash balance is £9,836 and there are first-class investments which cost the company £87,578. Unfortunately these were only worth £74,993 when the balance-sheet was made up, and although there is no immediate necessity to provide for the loss we fear there is very small chance of it being recovered.

RALEIGH CYCLE CO., LIMITED.

The fortunes of this company have improved considerably during the past two years as the output of cycles has been trebled, and the report for the year ended August 11 is consequently a much more hopeful document. Trading profits after providing for all charges, including maintenance of buildings, plant, and tools, and writing off bad debts were £20,583 compared with £12,659 and £3,614 in the two preceding years. With £45 from transfer fees the total revenue was £7,958 up at £20,628, of which debenture interest took £1,793 or £531 more, £4,513 was written off for depreciation, and £252 off depôt installations. Income-tax and directors' fees having been met the nett balance was £13,169 or £7,487 more, but the directors very prudently keep the dividend on the ordinary shares at 5 per cent. placing an additional £4,736 at £8,000 to reserve and carrying forward £2,388 more at £5,557. This step has been practically forced upon them by the lack of working capital, as the adoption of the gradual payment system means the giving of long credit and the contemplated increase in the output to 35,000 cycles during the current year necessitates a considerable addition to the money locked up in stock. The directors therefore regret not only that they cannot pay dividends on the ordinary shares in proportion to the profits earned, but also that they do not see much chance of giving the deferred shares a dividend for many years. Depreciation at the rate of 2½ per cent. has been allowed on the freehold land and factories, bringing the value down to £59,868, and 10 per cent. was written off machinery, tools, &c., but £6,800 was spent on this item, with the result that it shows an increase of £3,635 at £35,288, against which the reserve, after allowing for £24,031 previously written off for goodwill, &c., stands at £20,000. Owing to the policy outlined, materials and stocks have risen by £19,353 to £48,846 and sundry debtors are £23,821 higher at £54,943, while liabilities to sundry creditors, including the bank overdraft, are £15,587 up at £29,980. Cash is trifling at £222.

AGUA SANTA NITRATE AND RAILWAY COMPANY.

The repairs to the oficina Valparaiso were completed in the early part of the year, and work there was recommenced in April, with the result that the output of nitrate for the six months ended June 30 was increased by 56,210 quintals to 707,530 quintals. Sales in the same period fell off by 37,000 quintals to 613,000 quintals, but this would appear to mean little as the directors state that during the current half-year they will not be less than 750,000 quintals. Traffic on the railway likewise showed a decrease at 2,949,796 quintals compared with 3,275,543 quintals, and after writing off $101,555 or $3,383 more for depreciation, the nett profits were $119,279 lower at $1,200,972. Converted into sterling at 18d. per dollar this gave £90,073 against £99,019, and after meeting expenses in Valparaiso the balance available for distribution was £8,441 smaller at £79,217. As usual, two quarterly dividends of 4 per cent. each have been paid, after which £5,000 is written off for repairs to the oficina Valparaiso and £26,217 is transferred to the fund for development and redemption compared with £39,658 put to that account a year ago. The company's indebtedness to Messrs. Williamson, Balfour and Co. has gone up by £23,266 to £42,783 and liabilities to sundry creditors are £4,457 higher at £85,923 while the overdraft at the Bank of Chili is £17,871 less at £10,722, and bills payable come to £11,747 or £1,165 less. Against these there would seem to be ample assets, but the accounts are presented in such a way that the separation of capital from liquid assets would be a matter of considerable difficulty.

SCOTTISH INVESTMENT TRUST CO., LIMITED.

On November 1 last this company's investments, a detailed list of which is attached to the report, had a balance-sheet value of £808,486, being cost price or under. The company's offices, together with the safes, &c., were valued at £4,821, and the office furniture stands at £138. Sundry debtors owe just £103, and the cash balance was £134, which is really too small, considering that nearly £12,000 has to be provided for dividends. Even with this position it has been necessary to borrow £8,000 from the bankers and £3,056 is due to sundry creditors. We are not complaining, because the company's position is no doubt sound enough, the reserve being £40,752, but measured against the capital of £750,000 the company has too much of its resources in fixed investments. The revenue for the twelve months to November 1 was £40,773, and after providing debenture and other interest, management expenses, and income-tax £27,712 remains. From this the preference dividend is paid, 4 per cent. is given to the deferred stock, and £6,337 goes to reserve, increasing it to the figure named.

We are informed that the paper announced to be read by Sir Felix Schuster upon Gold Reserves before the Institute of Bankers, on Wednesday, December 12th, at 5.30, at the London Institution, has been unavoidably postponed until Wednesday, December 19th, at the same hour and place.

TRADE AND PRODUCE.

WHEAT.—Business during the week has not been on a very large scale, and the London cargo market again ruled quiet, although there was a little more inquiry during the first day or two. Heavy Black Sea shipments caused buyers to adopt a reserved attitude, but sellers were not disposed to deal below recent rates, and business was accordingly limited. Farmers' deliveries for the week were 58,468 quarters against 77,168 quarters last year, bringing the total for this season to 882,063 quarters compared with 1,112,628 quarters. Dornbusch estimates the quantity of wheat and flour on passage to the United Kingdom at 1,915,000 quarters against 1,795,000 quarters last week, and to the Continent 1,780,000 quarters compared with 1,840,000 quarters. Northern markets opened dull in consequence of heavier exports from the Black Sea, and the American advices also favoured buyers, so that after slow sales prices finished without material change. American markets ruled fairly firm, partly because of the small North-Western movement and partly owing to the reports of unfavourable weather. The large world's shipments, however, and the important clearances from Russia rendered the maintenance of price somewhat difficult, and there was a distinctly easier tone when Bradstreet's estimate came out showing the quantity of wheat in sight east of the Rockies at 75,919,000 bushels against 71,527,000 bushels last week and 62,605,000 bushels last year.

WOOL.—Owing to the mild weather prevailing the wool trade is in a rather unsettled condition, the retailers have not been able to get rid of winter cloths satisfactorily, whilst wholesale merchants have rather large stocks on hand. It is too early yet for merchants to operate much for next spring. Makers of fine goods, having smaller orders, are finding it difficult to obtain remunerative prices. There is, however, a very fair inquiry for fine and medium cloths for the Continent, for fine and low goods for Canada and South America and for medium and cheap tweeds for Australia and South Africa. Apart from the adverse influence of the weather the trade generally is vigorous and mills are fully employed, many, in some places, running overtime and some a double shift. There is a considerable expansion of business with the Far East, with Japan especially, who has placed orders for army cloths and for a fair quantity of worsteds in mixtures and dyed shades. The sixth and last series of Colonial wool auctions for the current year opened in London this week with a total of 107,500 bales. A large number of buyers have attended, both from home and Continental centres, and America has also been well represented. Prices have ruled in favour of sellers.

LINEN.—At farmers' markets supplies of flax have been rather smaller, and very few choice lots were to be picked up. Everything offered, however, was readily taken at very firm prices. A satisfactory business has been done in Irish yarns. The local market is for the most part quiet, but here and there so many customers are imperfectly covered that buying shows little cessation, and the aggregate of sales has been up to a full average, quite commensurate with the production. Values still tend upwards. Relief from the additional spindles is hardly yet perceptible, and it seems more likely to come first from standing damask looms. The volume of fresh business put through in linens has been considerable, and in some directions it could have been greatly increased but for the absolute refusal of manufacturers to accept the orders offered them. This applies mainly to certain descriptions of damasks, for the production of which it seems next to impossible to secure the necessary yarn. Heretofore manufacturers have been more or less handicapped owing to the difficulty in getting an advance in cloth commensurate with the rise in the spinning branch, but the situation has changed completely of late.

COTTON (from our Manchester correspondent).—There has not been much activity displayed in this market during the past week. The general tone has been quiet, and the turnover in piece goods and yarn may be described as unimportant in extent. The position of affairs makes it very difficult for buyers to obtain anything they want at a reasonable price. Both yarns and cloth are comparatively dear in relation to the price of raw American cotton. This is owing to the margin for spinners being abnormal. There are signs, however, that producers of yarn are losing a little of their strength, and in course of time it may be that quotations will be more on a level with the basis of the raw material. In piece goods for India numerous offers have been too low for manufacturers. Here and there odd sales have transpired for Bombay and Calcutta, but free buying seems out of the question for our Dependency at the moment. Scarcely anything is being done for China, and the demand is poor. Rather improved advices are reported from Shanghai, but these do not lead to more active operations on the part of exporters on this side. The smaller outlets of the Continent remain healthy, with a fair inquiry in goods of a miscellaneous character. For the Levant and Egypt buyers find difficulty in getting cloth at a price which is agreeable to the merchant abroad. T-cloths and Mexicans and other heavy goods have moved rather slowly. Prices are too high for free operations. Printing cloths remain poor in demand. Burnley producers complain of the low offers which are current. Some makers are compelled to take bids which leave a narrow margin, owing to declining order lists. The feeling in the home trade houses is healthy. Owing to the open weather, repeat orders in heavy goods have been rather disappointing, but in lighter fabrics the orders placed are encouraging. Home trade American yarns have only met with a quiet demand in both twist and weft. Spinners are accepting business which leaves a narrower margin of profit than a little time back. Shipping bundles are

also generally quiet. A fair Continental trade has been put through, but the demand from the Far East is impracticable. Bolton yarns are very strong indeed. Spinners have added to their already considerable strength. Very full rates are demanded for anything wanted, and users are pressing producers for delivery.

Cotton opened steadily in New York 1 to 8 points higher, and further advanced on vigorous support. There was a sensational advance on Tuesday for November delivery, the price jumping 90 points, reaching 11.70, the highest point of the season. Subsequently liquidation of November forced quotations downwards, and the close is a little weaker.

Coal.—The very mild weather we are experiencing has had its effect upon the coal trade, which is still dull. In fact, the demand for house coal is so slack that trade has been brought almost to a standstill. Best coal is very slow, and orders for brights and cobbles are on a small scale. Thus the market all round is about in the same condition as it was a week ago. For Seaborne there has, however, been a slightly better inquiry; best is quoted 17s. and seconds 16s. Since Monday 26 cargoes have arrived in the Thames. Dulness is also the condition of the Welsh market, prices being easier with a better supply of tonnage. Quotations are:—Best Admiralty, large, 15s. 6d. to 16s., f.o.b. Cardiff; Durham unscreened bankers, 10s. to 10s. 6d.

Iron and Steel.—Conditions are practically unchanged in the iron and steel markets, business all round being as active as ever. In the past week or so German and Belgian firms have placed here orders for several thousands of tons of Cleveland iron for shipment during the first half of 1907, whilst contracts for forward delivery have also been made on behalf of other European countries. Demand on American account has for the time being slackened off, mainly because dealers are concerning themselves about getting the iron they have already arranged for across the Atlantic. Nevertheless, they have been eagerly inquiring for Scotch brands of iron, their orders exceeding the powers of producers to cope with them. Thus many contracts have fallen through from inability to get the iron promptly, makers, as a rule, being sold out to the end of the year. So, finding they cannot get prompt Scotch, New York houses are arranging for shipments in 1907. There is simultaneously a brisk inquiry for Scotch iron from the Midlands and other localities. A return has been published of the output and prices of all classes of iron for the two months to October 31. The total production was 12,154½ tons against 10,683½ tons in the preceding two months, an increase of 1,471 tons.

Copper.—The well-sustained firmness of American quotations keeps this market strong, and it appears that the attitude of producers in the United States is one of absolute independence. Purchases made from manufacturers on this side are said to be followed by request for immediate delivery, indicating that actual consumers have no reserve stocks. For these reasons some of the leading dealers proclaim their belief in much higher prices. Early speculative inquiries caused an initial advance of about 10s. a ton, but the market was not at once supported by the leading dealers and a little "bear" selling rubbed off the early improvement. The dulness, however, did not last long, and later on anxiety to cover kept prices hard, although business was not large. The close was steady, prices being about £102 per ton for cash and £103 for future delivery.

Tin.—There is said to be less speculation in this metal, and it is thought that the maintenance of prices depends very largely upon the maintenance of the industrial boom in American and German markets. Dear money and the probability that next year supplies will be larger is said to be discouraging enterprise, but for the moment the market is undoubtedly very strong under the influence of good business from the East. This led to considerable covering by the "shorts," but business subsequently became quiet, and the near approach of the Dutch sales which took place on Thursday helped to keep prices back. The dulness, however, did not long prevail, and towards the end of the week business was again becoming active, with larger inquiries from consumers. Heavy purchases were made by leading interests, and the banks sales in Amsterdam were up to general expectation, so that prices firmed up again to £198 7s. 6d. for cash and £199 2s. 6d. for three months forward.

Tea.—Messrs. W. J. and H. Thompson report that this week's auctions were again marked with an activity unusual at this time of the year, and buying was general for all sections of the trade. Indian importers have taken the opportunity afforded by the scarcity of Ceylon teas to bring forward supplies freely, but in spite of that, a further improvement was secured for all teas under 8d. Fair common leaf sold well at an advance of about ¼d. per lb., and parcels which could have been bought at 4¼d. to 4½d. are now realising as much as 5¼d. per lb., but for higher qualities there was rather less inquiry, and quotations were inclined to dip. Of 47,700 packages offered, 41,022 were sold, realising 8.07d., against 8.22d. last week and 7.16d. a year ago. Rather over 18,000 packages of Ceylon tea were brought forward, and here also the inquiry was strongest for the lower grades. The scarcity of useful sorts between 6d. and 8d. has directed attention to inferior descriptions, which were lifted as much as ¼d. per lb. in some instances. Other qualities up to 9d. were likewise sought after, but for anything above that figure the market was decidedly weak. The average for the week was 8.67d., compared with 8.65d. and 7.64d. in 1905. With the shortage in Ceylon supplies the offerings from Java, amounting to 2,627 packages, were in demand at rather better prices.

Sugar.—A further improvement from 9s. 2d. to 9s. 4½d. took place in May deliveries this week, which was probably due to the further large exports of over 60,000 tons, published by the German Government for November 11-20. The quantity for the three weeks is now given at 131,500 tons, and Mr. Czarnikow estimates that the total for the month may reach 165,000 tons, against 90,000 tons a year ago. It is possible that there may be an error in the figures, he adds, but for the present they have probably stimulated buying by the German refiners and by "bears," while a report of a fresh sale to America may also have had some effect in stiffening the market. Business with the trade here continues moderate, and notwithstanding steadier markets Lyle's granulated was reduced 3d., while other makes were unaltered. New York has been firm, but offerings were scarce and dealings unimportant.

DIVIDENDS ANNOUNCED.

BREWERIES.

Frank Jones.—Interim of 2½ per cent. on the preference shares for six months to Aug. 31.

Morgan's.—Final of 1½ per cent. on the ordinary shares, making 4 per cent. for year ended Sept 29, carrying £988 forward.

New York.—£3 10s. per cent. on the unified stock for year to Aug. 31.

South African.—Interim of 7½ per cent. on the ordinary shares.

Ushers' Wiltshire.—Final of 6 per cent. on the ordinary shares, making 10 per cent. for year ended Sept. 30, carrying £3,273 forward.

Writtle.—9½ per cent. for year ended Sept. 30.

MINES.

Cape Copper.—14s. per share on the cumulative preference and ordinary shares.

Carrington's Lion P.C.—2d. each share.

Champion Reef of India.—A balance for year ended Sept. 30 of 9d. per share, making 2s. 3d. per share, or 90 per cent. for the year.

Durban-Roodepoort Gold Mining.—Interim account of year ending Dec. 31, 1906, of 2s. per share (10 per cent.).

Kalgurli Gold.—Interim (No. 19) of 7s. 6d. per share and a bonus of 5s. per share.

Mount Morgan Gold.—3d. a share for Nov., payable Dec. 1.

Namaqua Copper.—On account of the current year an interim of 4s. per share, equal to 10 per cent. on the capital issued and paid up.

Oroville Dredging.—12½c.

Tilt Cove Copper.—Interim of 6s. per share

MISCELLANEOUS.

Alsing and Co.—10 per cent. and a bonus of 2½ per cent. for year ended Sept. 30.

Angela Nitrate.—Interim of 5 per cent.

Argentine Southern Land.—2s. per share and a bonus of 2s. per share, placing £25,000 to reserve, and carrying forward £13,814.

Assam Co.—Interim of 3½ per cent., or 14s. per share.

Bristol Wagon and Carriage Works.—Interim on the called-up capital of 4 per cent. for half-year ended Sept. 30.

Daniel Brown.—Six per cent. for the year, placing £500 to reserve, and carrying forward £405.

Dumont Coffee.—Five and a-half per cent. on account of arrears of dividends on the preference shares.

Edward and John Burke.—Interim of 7 per cent. per annum on the ordinary shares, payable Dec. 15.

Glasgow Pavilion.—5 per cent., making 10 per cent. for the year.

Great Eastern London Motor Omnibus.—Interim at the rate of 10 per cent. per annum on the ordinary shares, the dividend being calculated on the calls paid up from time to time at the aforesaid rate. The amount of the dividend per share will be 4¾d.

Ilfracombe Hotel.—5 per cent., carrying £900 forward.

J. W. Cameron and Co.—Further of 7 per cent. on the ordinary shares, making 12 per cent. for year ended Sept. 30, placing £12,500 to reserve, and carrying £1,049 forward.

Jhanzie Tea.—Interim of 2½ per cent.

John Brown and Co.—Interim at the rate of 5 per cent. per annum on the ordinary shares.

Metropolitan Amalgamated Railway Carriage and Wagon.—Interim at the rate of 7½ per cent. on the ordinary shares for half-year ended Sept. 30.

Newport Abercarn Black Vein Steam Coal.—Interim at the rate of 6 per cent. per annum on both preference and ordinary shares for half-year ended Sept. 30.

North Lonsdale Iron and Steel.—At the rate of 7 per cent. per annum for year ended Oct. 31.

Pelican and British Empire Life Office.—Interim of 7½ per cent., being at the rate of 15 per cent. per annum on the paid-up capital for 1906.

Peruvian Corporation.—£2 per cent. additional interest on the debentures, and £1 10s. per cent. on the preference stock, with £75,000 to reserve, £5,482 written off colonisation account, and £3,850 set side towards insurance fund on the Lake steamers.

Transvaal and Delagoa Bay Investment.—3s. per share, equal to 15 per cent.

Trust Union.—On the cumulative preference shares at the rate of 4½ per cent. per annum for the half-year to Nov. 15, being 4s. 6d. per share.

Weardale Lead.—Interim of 6d. per share, payable Dec. 12.

Western Telegraph.—Interim of 3s. per share, or at the rate of 6 per cent. per annum for quarter ended Sept. 30.

MINING RETURNS.

Battlefields.—Crushed 1,205 tons, 1,000 ozs.; cyanide 800 tons, 423 ozs.

Briseis Tin.—Shipped 25 tons, all Briseis metal.

British Broken Hill Proprietary.—2,176 tons crude ore produced 340 tons concentrates, containing 211 tons lead and 8,840 ozs. silver.

Broken Hill South Blocks.—476 tons despatched to smelters value of 34·2 per cent. lead and 4·9 ozs. silver per ton.

Broken Hill South Silver.—19,919 tons crude ore produced 3,327 tons concentrates, containing 2,262 tons lead and 49,905 ozs. silver.

Central Chili Copper.—Production of regulus contained 178 tons fine copper. £669 value gold and silver.

Chinese Engineering.—Output of coal, 23,000 tons; sales, 21,500 tons; consumption, 1,550 tons.

Eaglehawk Consolidated.—Crushed 960 tons for 357 ozs.; 122 ozs. from cyanide.

Great Cobar.—Treated 12,790 tons; output of matte, 940 tons; contents, 330 tons copper, 577 ozs. gold; 6,000 silver shipped; ingot copper, 330 tons, ingot copper made 435 tons.

Kamfersdam.—Diamonds, 1,390 carats; 14,995 loads blue-ground deposited on floors.

Kelantan.—Recovered 64 ozs.

Kelly's Queen Block.—Treated 667 tons; value including residues, £1,800.

North Broken Hill.—Plant treated 2,010 tons crude ore, producing 350 tons concentrates, containing 245 tons lead and 6,020 ozs. silver.

Oroville Dredging.—Gross returns, $25,000.

Peiser Diamond.—3,411 carats from 25,277 loads washed, equal to 13½ carats per 100 loads.

Regina Diamond.—Debris, 717 loads washed, producing 39½ carats.

Sulphide.—3,527 tons ore milled, producing 578 tons leady concentrates; 12,738 tons tailings treated, producing 4,582 tons zinc concentrates. 747 tons leady concentrates, 490 tons residues, and 3,983 tons purchased ores smelted, yielding 1,211 tons lead, containing 94,458 ozs. silver, and 10,777 ozs. gold; also treated 366 tons zinc concentrates, producing 99 tons spelter.

Union Consolidated Copper.—Output, 30 tons, 30 per cent.; 4 tons, 15 per cent.; 200 tons, 6 per cent.

NEXT WEEK'S MEETINGS.

MONDAY, DECEMBER 3.

California Oil Fields.—Winchester House, 2.30 p.m.
Darracq and Co.—Salisbury House, 2.30 p.m.
General Motor Cab.—32, Old Jewry, 11.30 a.m.
Hornsby (Richard) and Sons.—Midland Grand Hotel, 11.30 a.m.
Interoceanic Railway of Mexico.—Winchester House, noon.
Jumper Gold Syndicate, California.—Glasgow, 2.30 p.m.
Morgan's Brewery.—Norwich, noon.

TUESDAY, DECEMBER 4.

Arnold, Perrett.—Wickwar, 2.30 p.m.
Cavendish Land.—Cannon Street Hotel, 4.45 p.m.
Cordoba and Rosario Railway.—Winchester House, 2.30 p.m.
Dorman, Long.—Middlesbrough, noon.
Ilford.—Winchester House, noon.
Manchester District Motor Omnibus.—Cannon Street Hotel, 11.30 a.m.
New York City Freehold Estates.—Cannon Street Hotel, 12.30 p.m.
Oceana Consolidated.—Cannon Street Hotel, noon.
Raleigh Cycle.—Nottingham, noon.
Usher's Wiltshire Brewery.—Trowbridge, 1 p.m.

WEDNESDAY, DECEMBER 5.

Aron Electricity Meter.—Winchester House, noon.
Delhi, Umballa, Kalka Railway.—Winchester House, 11.30 a.m.
Southern Punjab Railway.—70, Cornhill, 1 p.m.
St. Pauli Breweries.—9, New Zealand Avenue, noon.

THURSDAY, DECEMBER 6.

Bookham Syndicate.—6, Bedford Row, 11.30 a.m.
Cape Electric Tramways.—1, London Wall Buildings, noon.
Jones, Dickinson and Co.—Winchester House, 3 p.m.
London Scottish American Trust.—Cannon Street Hotel, noon.
Montrose Gold Mining and Exploration.—Winchester House, noon.
Northern American Trust.—Dundee, noon.
Rand Victoria Mines.—Cannon Street Hotel, 2.30 p.m.
St. John Del Rey Mining.—Cannon Street Hotel, 2 p.m.
Wolverhampton and Dudley Breweries.—Wolverhampton, noon.
Wenlock Brewery.—Winchester House, 1 p.m.

FRIDAY, DECEMBER 7.

British Empire Land Mortgage.—Cannon Street Hotel, noon.
Leeds and Wakefield Breweries.—Leeds, 11.30 a.m.
Manila Railway.—Winchester House, 3 p.m.
Sao Bento Gold Estates.—6, Queen Street Place, 12.30 p.m.
Westralia Mount Morgans Gold Mining.—Winchester House, noon.

Messrs. Hamilton-Adams Frères, secretaries to the H.A. Syndicate, Limited, write to us as follows: "With reference to the 115,000 shares in the Kluchi Gold Mines, Limited, we beg to certify that the total number of shares applied for is about 230,000, and that the letters of allotment and regret will be posted in the course of a day or two."

COMPANY MEETINGS.

J. AND P. COATS, LIMITED.

ANNUAL MEETING OF SHAREHOLDERS.

CHAIRMAN REPLIES TO CRITICS.

The sixteenth annual ordinary general meeting of J. and P. Coats, Limited, was held on Thursday in the Merchants' Hall, Glasgow. Mr. Archibald Coats, chairman of the company, presided, and there was a very large attendance of shareholders.

THE CHAIRMAN'S SPEECH.

The Chairman, in moving the adoption of the report, which has been published, said: The announcement of the result of last year's trading of our company has evoked such curious criticisms from certain quarters that I am not quite sure whether I am expected to apologise for the profitableness of our business. Evidence is, however, not wanting that there are people who do understand the true facts of the case, and it is interesting to observe that the well-known paper "The Draper's Record," which discusses all questions having special reference to the business of the drapers, who are our customers, has a better appreciation of the sources from which our prosperity springs than certain members of Parliament, whose comments indicate utter ignorance of the subject, and who do not appear to have taken the least trouble to obtain even such information as is readily accessible to all. The shallowness of their views is only equalled by the recklessness of their assertions. They talk of a monopoly which we have obtained by crushing our competitors, and which has enabled us to double our prices.

QUESTION OF MONOPOLY.

It is exactly ten years since, when, in addressing you in this hall, I dealt with the assertion that we had a monopoly, or, as some prefer to call it, a "virtual monopoly," of the sewing cotton trade of the world. To show you how entirely unfounded such an assertion is, I then stated that there were in this country, outside of the concerns in which we are interested, more than twenty sewing cotton manufacturers of varying importance, that on the Continent of Europe there were over forty, and in the United States two concerns of the first importance and numerous smaller makers, that a goodly proportion of these competitors employ a large number of workpeople, and that the capital invested in the trade amounted to a good many millions sterling. As a matter of fact, there are at the present moment about 180 makers of sewing cotton, not including those in which we have an interest, and yet people still talk of a monopoly. I may add that the number given includes over 170 with whom we neither have, nor ever had, any agreement as to prices or terms. They sell wherever it suits them to do so, at whatever prices they please, and as the great bulk of our trade is done outside of the United Kingdom, the number of competitors manufacturing in this country is of less importance to us than the number of makers abroad. On the same occasion, that is to say, ten years ago, I gave you the assurance that our business rested upon a more secure basis than a monopoly would furnish, that we were in an exceptionally strong position as regards cost of production, efficient and economical distribution, and the esteem in which our goods were held by the consumer. (Hear, hear.) I stated that this would enable us to make very satisfactory profits out of prices which yielded but a moderate return to the great majority of our competitors, and offered little inducement to others to enter a trade already so keenly competed for. That statement, which correctly described our position ten years ago, holds good to-day. Is there any business man worthy of the name who does not understand that with so large a turnover, with abundant capital, and with the best manufacturing plant which it is possible to procure, our cost of manufacturing must be below that of competitors not so favourably situated; that with a selling organisation much more efficient than that possessed by any other concern, we are enabled to distribute our goods to greater advantage and at smaller cost—(hear, hear)—and that, if in addition thereto the esteem in which our goods are held by the consumer enables us to obtain higher prices than others, large profits are the natural result of these perfectly legitimate advantages? If it were necessary to give an illustration, I might add that, if our cost of manufacturing is less by 5 per cent., our selling expenses less by a like percentage, and if, in addition thereto, the consumer willingly pays 5 per cent. more for our goods, it is easy to see that our profits are bound to be much larger than those of our competitors.

THE COMPANY'S ADVANTAGES.

Do the people who are so ready to criticise ever stop to think that our enjoying these advantages cannot be purely accidental? May it not, on the contrary, be reasonably assumed that the strong position we now hold is the fruit of our labour? To build up a business yielding a yearly profit of several millions is not quite the simple matter our critics appear to think; it has taken the better part of a century to do so, and those who know anything about the sewing cotton trade cannot ignore the fact that numerous firms who were in the trade thirty, forty, and fifty years ago had to liquidate, having failed to make it a success, whilst others who had the same opportunities as ourselves have not made the most of them. Our turnover in the aggregate is a very large one, but few people have any conception how small are its component parts, what a petty business it is to sell hundreds of varieties adapted to the requirements of hundreds of markets, and involving a mass of detail which requires constant attention and

careful management. We have twenty different manufacturing concerns in various parts of the world to look after, hundreds of branch houses and depôts, and the number of our ledger accounts far exceeds 100,000. These figures will give you some idea of the details requiring daily attention, and the necessity for a carefully devised and efficient organisation to cope with them. If we had neglected our opportunities, failed to increase the earning capacity of the business, abstained from perfecting our organisation and from introducing economies in the process of manufacturing and the methods of distribution, we should, of course, have escaped the criticism of Mr. Chiozza Money and Mr. Keir Hardie. You will readily understand that I do not mention these things in order to blow our own trumpet; you know that in the past we have taken very little notice of what was said about the company or about those responsible for the conduct of the business, and have pursued the even tenor of our way, but when agitators, be they in Parliament or out of it, start a campaign of slander, and are unscrupulous enough to say that our profit has been wrung from underpaid mill girls, we think it time to speak out. (Applause.) I am glad to say that the great majority of our Paisley girls are far too shrewd to be deceived by the humbug that has been dished up to them, in order to get them to part with a portion of their earnings by way of contribution to funds which are used for the purpose of agitation in other trades and the fostering of strife. The attempts to make our workers dissatisfied have so far met with little success, although it must not be overlooked that amongst so many there is bound to be a certain number who think they have cause to complain, and those are almost invariably the worst workers, who would not be able to make good wages under almost any conditions. (Laughter.) It is a well-known fact that those least inclined to do an honest day's work are, as a rule, the greatest spouters, and that empty vessels make the most sound.

EFFECT OF AMALGAMATION.

You will remember that, after the amalgamation in 1896, many people expected that the business would yield largely increased profits in the near future, almost immediately, and that there was much disappointment when this expectation was not realised. Some years later, when there had been a considerable increase, I told you at our annual meeting that much had been done to cheapen production and lessen the expense of distribution, but that more remained to be done, and that our unremitting efforts would be directed to increased efficiency and economy. The profit for the first five years following the amalgamation averaged, roughly, £1,800,000 per annum; that of the subsequent five years, £2,600,000. That last year's profit has been so very much larger than the average is not of any special significance. The total is formed of such an immense number of fluctuating items that it is often purely accidental that one year is better or worse than another. Unusually large purchases in some market on account of an impending alteration in the tariff of foreign exchanges, the prices at which stocks have to be valued in accordance with a fixed rule, and a variety of other causes, may increase or lessen the profit of a particular year without there being any material change in the condition and profitableness of the business generally. In the year under review there was a not inconsiderable increase in sales, resulting probably from the increased consumption of cotton goods which, it is well known, has benefited Lancashire in so marked a degree. The population of Great Britain is roughly 45,000,000, but we supply a not inconsiderable proportion of the sewing cotton required by many hundreds of millions inhabiting other countries. Only a small portion of our profit is derived from the home trade. Is there anything in this that we need be ashamed of? From the way in which the profit we make is denounced one would almost suppose so. There are never-ending complaints that the ratio of increase in manufacturing is so much greater in other countries than in Great Britain, and, as a matter of fact, many of our industries have lost the commanding position in the world's markets which they occupied in former years. This is not the case in the sewing cotton industry. In spite of foreign tariffs and of foreign competition we hold our own. It seems to me an extraordinary thing that, instead of this being a source of legitimate pride to those of our countrymen who do us the honour of taking notice of our prosperity, we are looked upon as a species of malefactor to whose dark and evil doings Mr. Chiozza Money and Mr. Keir Hardie and other self-appointed guardians of the welfare of the British Empire and people must draw the attention of the Government and of the public. (Hear, hear.)

REPLY TO ACCUSERS.

I should like to say a few words with regard to the accusation that our aim has been to crush our rivals in trade, an accusation which is so untruthful that we should not take the trouble to notice it were it not unfortunately the case that some people act upon the principle that if they only throw sufficient mud some of it will stick, and that, however unjust an accusation may be, there is always some chance of its being believed if it goes uncontradicted. We have neither interfered nor attempted to interfere with the trade of our competitors as long as they did not attack ours. Our largest competitor is the English Sewing Cotton Company. The admitted want of efficient management brought this company to the verge of liquidation. We were repeatedly urged to take over the business, but declined, as we did not wish to profit by the misfortunes of the 10,000 or more shareholders of that company. Instead of profiting by the opportunity, we offered our assistance to get it out of its troubles, a loan of £400,000 to regulate its financial position, and elaborated a scheme for reorganising and improving its manufacturing arrangements. I ask you whether that is the action of people who are intent upon crushing their rivals, who are so keen to make money that all means are good enough for them if only they help to pile up profits? The only people who could find fault with your directors are our shareholders, as it is rather unusual for a company to lend assistance to a competitor when the latter is in difficulties. Our holding of 100,000 shares in the English Sewing Cotton Company is, of course, a trivial matter compared to the advantage we should have derived had that company gone into liquidation, or continued in the unsatisfactory condition in which it found itself five years ago. I should also refer to the fact that you are now reaping the benefit of our having made it a rule only to distribute a portion of the profits, in spite of our having often been found fault with for doing so. For a number of years the dividends paid on our ordinary shares represented merely one-half of what we might have distributed, the greater part of the surplus being re-invested with very satisfactory results. As is clearly shown in our balance-sheet, there were, on June 30 last, assets of the value of about eight millions sterling, which are not included in the amount representing the cost of the business, of the mills and machinery, of all the shares in subsidiary companies, and of funds which we have furnished to the latter for extensions. It is, therefore, downright nonsense to say that the capital of our company of ten millions sterling, together with about one million borrowed on debentures was sufficient to produce a profit of nearly three millions sterling, and that Mr. Chiozza Money and similar critics have failed to understand this only shows their ignorance and the shallowness of their judgment.

TACTICS OF AGITATORS.

Mr. Chiozza Money asked the President of the Board of Trade whether he was aware that we now sell 130 yards of sewing cotton at the same price at which we used to sell 200 yards; that the increase in price is not accounted for by an increase in cost of production; and whether he could see his way, by legislation or otherwise, to protect the consumers of sewing cotton, who are mostly poor people. Therefore, according to Mr. Chiozza Money, we have raised our price by about 50 per cent. Another statement to which my attention has been drawn is that, where the consumer formerly got two spools of 6-cord for 1½d., the price is now 2½d.; this would mean an increase in the cost of the article of about 65 per cent. In a letter published by the "Daily Record and Mail"—(laughter)—it was even said that 100 yards cost at present as much as 200 yards before the monopoly was established. Now for the facts of the case. Since the amalgamation our average price of the standard length of 200 yards 6-cord, which is taken as the basis for the price of the other lengths, has been less than twopence per gross of 144 spools higher than the average price ruling during the twenty-five years preceding the amalgamation; but, taking into account the larger discounts we have allowed to our customers since the amalgamation, the net price we charge is actually less. On the other hand, wages have risen considerably, and the cost of the cotton we use, as well as of coal, is much higher than formerly, whilst spool-wood, which is also an important item, has become much dearer. We pay at present for the bulk of our supplies of wood 25 to 30 per cent. more than formerly. Does it not seem extraordinary that men like Mr. Chiozza Money, who pretend to be not only students of economic subjects, but actually think themselves called upon to enlighten others, should not take the trouble first to inform themselves about matters of this kind? The most despicable means have been resorted to in attacking us, for the purpose of causing trouble with our workers and of misleading the public. The articles published in a weekly Labour journal confirm this. The paper was edited by a man calling himself a minister of religion, and week after week it contained lies about the "tyrannical rules" in force in our mills, and the attempts of the management to devise means for bringing down the wages of the girls, who were represented to be working in a temperature of from 80 to 100 degrees, and leading a life which, it was said, might at a stretch be termed slavery. Fair treatment, it was asserted, was denied them, they had not enough to live upon, and were bullied by the managers and foremen with all the subtlety and experience required in hectoring generations of hysterical females. I quote the very words used. Now, I can tell you that a better and more respectable class of girls than our workers does not exist in the whole kingdom—(applause)—and yet this socialistic agitator had the impudence to say in his Labour journal that the low wages of the girls drive them to immorality, and that the results can be seen in the streets of Paisley any night of the week, Sunday included. ("Shame.") This man and his associates brought Mr. Keir Hardie and others to Paisley to help in fostering the agitation by delivering speeches to our workers, and it says a great deal for the good sense of the latter that the great majority of them turned a deaf ear to the harangues to which they were treated. And what happened next? When the noble and disinterested upholders of the rights of labour had had their say, and had increased the circulation of their paper by making these weekly attacks upon the employers of the poor, down-trodden workers for whom such deep sympathy was displayed, one of our directors received a polite note intimating that the Labour journal in which the articles had appeared was for sale. Some of you may think that I have treated this subject at unnecessary length. It is, however, not only of importance to us as employers, but also for the interests of the workers, that they should clearly understand the nature of the attempts made to hoodwink them,

and nothing can be more injurious to the industries of the country, and to employed and employers alike, than the fostering of enmity between the two. To do so appears, however, to be the chief aim of the agitator. No lie is too palpable, no slander too foul, when that is the aim in view. I have already in former years told you that the bulk of our profit is derived from our business and mills abroad. More than one-half is made on goods which are not manufactured in this country at all. Of the output of our home mills by far the greater portion is exported, and not one-fifth is sold in this country. As you are aware, a gigantic manufacturing plant in Great Britain, the United States, and half-a-dozen other countries, costing many millions sterling, together with other assets of the value of more than eight millions sterling, were required to produce our profit, not to speak of the labour of several generations. And what did Mr. Keir Hardie say at a public meeting held on the 4th inst. in Edinburgh under the auspices of the Independent Labour party? "In the *Glasgow Herald* appeared the balance-sheet of J. and P. Coats, Limited, showing profits roughly amounting to two and three-quarter millions sterling, wrung, every penny, out of the labour of underpaid girls." Did anyone ever hear such silly nonsense? Mr. Keir Hardie must have had a terribly poor opinion of the intelligence of his audience to treat them to such trash, or is it that the cause which the leader of the Labour party champions is so weak that it must at all hazards be bolstered up by reckless misrepresentations?

UNFOUNDED RUMOURS.

Letters have been received from several shareholders inquiring whether the holders of preferred ordinary stock would be entitled to participate in a distribution of reserves. We are advised that they would not, and the directors think that it cannot serve any useful purpose to discuss the matter. The rumour that an issue of bonus shares has been under consideration is devoid of foundation. The question has not even been discussed by the board, and the same remark applies to the rumour of an impending amalgamation with the English Sewing Cotton Company. There is another subject with reference to which I ought to say a few words. Our interests in Russia have naturally given us much concern, and the frequent disturbances which have occurred and consequent stoppages of works have lessened the profit of the business. We can only hope that matters will improve as time goes on. I now beg to move that the report and accounts for the year ended June 30, 1906, as submitted to this meeting, be, and are hereby, adopted, and that the payment of the dividends stated therein, and of a bonus of one shilling per share on the ordinary shares, and the appropriation to various funds, be, and are hereby, confirmed. (Applause.)

Sir Thomas Glen-Coats, M.P.: In a word, I beg leave to second the motion of the chairman.

The Chairman: Does this meet with your approval? (Applause.)

ELECTION OF DIRECTORS.

Sir James King: The motion that has been entrusted to me is as follows:—"That Sir Thomas Glen-Coats, Bart., M.P., Sir William Arrol, and Messrs. Peter Coats, P. M. Coats, W. H. Coats, and E. S. Coats, who retire at this time, be re-elected directors of the company, and that the election of Mr. E. Alex. Philippi as a director of the company be confirmed." As regards the first six names, they have served you long and well. They command the confidence alike of the shareholders and of the general public, and I feel sure you will unanimously re-elect them. As regards my young friend, Mr. Philippi, I am sure he has already proved himself to be very useful in the counsels of the board. From his special training and his knowledge of foreign languages he will be of more than ordinary value as a connecting link with our important interests abroad, and I commend him most confidently to your consideration and to your approval. I beg to move accordingly.

Mr. T. J. Hirst: I have much pleasure in seconding the resolution.

The Chairman: Does the re-election of the six old directors and of Mr. Philippi meet with your approval? (Applause.)

Colonel William Clark: I have much pleasure in proposing:—"That Messrs. Turquand, Youngs, and Co. and Mr. David W. Kidston be reappointed auditors of the company for the current year, and that it be remitted to the directors to fix their remuneration."

Mr. Thomas Rowat: I beg to second that.

The Chairman: Does this meet with your approval? (Applause.)

A vote of thanks having been awarded to the chairman the meeting separated.

LE ROI MINING COMPANY.

The seventh ordinary general meeting of the shareholders of Le Roi Mining Co., Limited, was held on Tuesday at the Great Hall, Salisbury House, London Wall, E.C., Mr. T. D. Grimké-Drayton, J.P. (chairman of the company), presiding.

The Secretary (Mr. Harold A. Wesson) having read the notice convening the meeting and the auditors' report,

The chairman in moving the adoption of the report and accounts, said the present directors had only been in office since December last, and proceeded to say:—To all of us—and especially to those who have been shareholders from the early days, and who, like myself, bought shares at high prices—it is a matter of much gratification that we have at length reached the dividend stage and that we are this year able to distribute among the shareholders a dividend at the rate of 3¼ per cent. (Applause.) As you will remember, an interim dividend of 1s. 6d. per share was paid in February last, and we now recommend that a further distribution be made of 1s. per share, less income-tax, making 3¼ per cent. for the year. I hope that this is the beginning of the dividend era, and that we may be able in the future to give the shareholders some adequate return upon their investment. We are pursuing what I may call a conservative policy in the matter of the dividend, but we think it is better to be on the safe side. Mr. Mackenzie told us last year, in his report on amalgamation, that if we entered the proposed new company we might expect to receive 19 per cent. on our reduced capital if silver and copper prices were maintained, or, in other words, the equivalent of 4¾ per cent. on our present capital. Later, the directors told us that on the scheme as they finally put it forward last December, we might expect 14 per cent., or £37,000 per annum. As a matter of fact, the amalgamated company, which we were invited to go into, is paying dividends at the rate of only 10 per cent., or £26,400 on the capital we were to have had under this proposed scheme of amalgamation, whilst we are paying in Le Roi 3¼ per cent. on our present capital—that is, £35,000. After all the years during which we have been accustomed to learn from the accounts that we owed very large sums to the bank, it is refreshing to find that at June 30 last we had over £9,000 in cash at our bankers—(applause)—and this after having paid you the sum of £15,000 by way of an interim dividend in February. Some of this cash will in various ways be expended for the purposes of the company from time to time, and will enable us to finance our smelter arrangements and so save interest on money borrowed from the bank. When my co-directors did me the honour to make me chairman, I stated that if I accepted that responsibility I should like to go out and see everything for myself My colleagues expressed a wish that I should do this, and, as was the case with Mr. Waterlow, my expenses were paid by the company. I did not ask any remuneration for my services. I left England on July 31 and returned home on October 17. I spent much time at Rossland and Northport. I do not pretend to say I saw everything, but I did see much. I went down the mine a number of times, spending most of the day underground on each occasion. The mine is in very good order and there is far more ore in sight than at any previous time. Many changes have been made in and about the mine. The underground work done by the previous managers, including diamond drill holes, has been most diligently studied and the work carefully laid out, and so we have found ore where some of our predecessors failed. It is clear to me that in the past there was bad management, chiefly because of the constant changes and uncertainty as to policy. Now that is altered, and though I have been down many mines, I have seen few where the management was better. From what I saw while in Rossland, I am inclined to agree with Mr. Frecheville that Le Roi under good management might have paid dividends from its commencement. At Northport the cause of failure was, I think, appointing men some of whom knew very little about smelting, and not arranging for a regular supply of suitable ore. I believe I am right in saying that there have been six different managers at the smelter during about six years. I spent several days with Mr. Goodell, our smelting manager, at Northport, who has been in our service longer than anybody who has occupied that position, and I am satisfied he is the right man in the right place. I must congratulate Mr. McMillan on his admirable choice of Mr. Goodell and of Mr. Larson, our mine superintendent, both of whom are very able men. The other officials we have are excellent men, as keen as possible, and, I am bound to say, superior to most I have had in the old country Before I leave the question of Northport, I think I ought to say, from my own observations, our thanks are due to Mr. McMillan for stopping the moving of the blower from Northport. He was only just in time; but very little mischief had been done. Unless it was intended to destroy the smelter I cannot conceive how any sensible man could have given such orders as undoubtedly were given. Le Roi is excellently equipped; indeed, the arrangements are, if anything, too large, but this is a good fault, and I am of opinion that there is far more ore in your property than has come out; instead of an empty egg, it is an egg whose top only has been taken off. As you have been told in the report, we have done away with the Trail contract, which, had it been allowed to continue, would have left us entirely in the hands of the Trail people and without our own smelter at Northport. I shall ask Mr. McMillan to tell you more about this question. My firm conviction is that we have done well to decide that Le Roi shall stand alone, and my own ideas are to leave the capital as it is, and if at any time we should wish to extend our operations or the scope of our work, to pay for what we want out of profits, and that we should go on pushing development as fast as possible, at the same time giving the Northport smelter a fair trial.

Mr. G. W. Wilson seconded the motion, which was unanimously agreed to without discussion.

Mr. A. J. McMillan, managing director, then addressed the shareholders at some length, after which the meeting proposed a hearty vote of thanks to him for the services he had rendered the company.

THE ANGLO-EGYPTIAN BANK, LIMITED.

The twentieth ordinary general meeting of the shareholders of the Anglo-Egyptian Bank, Limited, was held at the Bank, 27, Clement's Lane, E.C., at three p.m., on Tuesday. Mr Thomas Usborne, Chairman of the Board of Directors, presided.

Mr. W. Hart, the Secretary, read the notice of the meeting and also the report of Messrs. Cooper Brothers and Company, chartered accountants, as appended to the accounts.

The Chairman: I rise to move "That the directors' report and the accounts annexed thereto be received and adopted." Before I put the report to the meeting, I suppose you will expect me to say a few words upon it. Of course, it cannot be anything but a subject of congratulation to me and also to my Board that this is the eighteenth record report we have had the pleasure of presenting to you at these annual meetings, and it is not only a record, but it is an improved record. The advance in the profit this year as against last is greater than it has ever been before. The figures you all know; you have them before you. Some particularly anxious person, criticising those figures, might say, "Well, it's hardly the time to increase your dividend and reduce your carry-forward," but that is not exactly the way to look at it. We have increased the reserve, not the dividend, at the expense of the carry-forward. Now this is, of course, an extremely satisfactory result for the year. We have £129,892 as nett profit. That is not only a record, but one greatly in excess of last year. On this point I have only to say that it is the intention of your Board, in consequence of this result, to give our staff, such of them as have been in our service since December 31, 1905, a bonus of 10 per cent. for the year on their salaries. (Hear, hear.) I am very glad you approve of it, for, naturally, it is necessary to show the men how we appreciate them. The more they do for us, the better we must pay them, and bonuses are a very good way of doing that, because it keeps them up to the mark, and if we have bad times hereafter bonuses will not exist. With this satisfactory report before us, I wish to warn you that the better the reports are in the case both of ourselves and our present competitors, the greater is the competition for business likely to be. Instead of the three or four other banks that existed when I took this chair, there are now eleven, and still the cry is "More are coming." Therefore you must not expect this greater profit to be kept up, although I do hope it will be. (Laughter.) We should not have increased the dividend this year—especially as I told you last year we would not—had we not felt that under ordinary business conditions we should be able to maintain it. You know that there has been a good deal of discussion in the City as to the large quantities of gold that have gone out to Egypt. In the month of October a considerable quantity of gold went there. But the crop of cotton this year is a record one—6½ million cantars—the price being twenty per cent. higher than it was last year. Of course, the crop takes more gold to lift it, and as it happened to open at a good price Egyptian growers have been selling freely. The gold has been required for Egypt in larger quantity during October than ever before. You must not take this demand for gold to mean money be locked up in land speculations, and so on; it is a legitimate demand for gold to pay for the crops raised, and there is no reason to be at all anxious about the matter. About the figures in our accounts, if any gentleman wishes to ask any question I shall be glad to answer him. They are very simple, and no doubt you thoroughly understand them. With these few remarks I will sit down, and, after the motion has been seconded, I will invite any questions which you may wish to put. (Applause.)

The usual resolutions were then put to the meeting, and the proceedings terminated by a cordial vote of thanks being given to the chairman, directors, and staff of the Bank.

SALVADOR RAILWAY COMPANY.

The seventh ordinary general meeting of the Salvador Railway Co., Limited, was held yesterday at Cannon Street Hotel, London, E.C., Mr Charles S. S. Guthrie (chairman of the company) presiding.

The Secretary (Mr. F. C. Tillbrook) having read the notice convening the meeting and the auditors' report,

The Chairman, after referring to the death of the vice-chairman, said: The report of the directors deals so fully with our operations during the past year that it leaves very little for me to say. There are, however, a few points to which I wish to draw your attention. The comparative figures in No. 3 revenue account show increases in expenses as compared with last year in items A, B, and C. This is almost entirely accounted for by our outlay on stations and buildings, which having been in existence for some years, are now calling for extensive repairs. I may call your attention, in passing, to the fact that all the expenditure on the line has been met out of revenue. Item B, locomotive power, increase £1,400, represents a larger expenditure on fuel, which is explained in the report. The increase of £500 in item C is for extra repairs on our rolling stock. Items D and E show decreases. On the credit side of the account there is only one material decrease, and that is in freight and storage, £3,100 less than last year. This does not mean that we either carried or earned less under this head—as a matter of fact, we carried 1,940 tons more than in 1904-5—but arises from the circumstances that in last year's accounts the dividends on our Pier shares, which were included under this heading, were received in advance of the payment for annuities for which we are liable; consequently the dividend of £2,670 was credited in 1904-5, the corresponding annuities being debited in 1905-6. These entries are now presented separately. The final result is that the credit side of our revenue account is smaller than last year by about £1,800, which, added to the increased expenditure, gives the balance which we carry to net revenue account of £71,121 4s. 3d., as against £74,245 16s. 9d. last year. Taking the net revenue account No. 4, you will note that we are only able to credit this account £723 13s. 7d. for difference in exchange. Last year the corresponding credit was £2,125 13s. You will remember that at our last general meeting I warned you that this item would probably prove very variable. The only other entry in this account to which I wish to call your attention is on the debit side—"to prior lien debentures redeemed, £15,000." This is made up of £11,900, being debentures redeemed during the previous six years, and £3,100 cost of redemption this year. After our accounts were made up last year our auditors drew our attention to the obligation we were under to reimburse capital, now that we have the means, the £11,900 hitherto charged to capital account. You will, I am sure, be thankful that our funds admit of our making this reimbursement. Mr. A. J. Scherzer, who became our general superintendent in July, 1900, has resigned his post on account of the bad state of his health. The best proof I can give you of Mr. Scherzer's services to the company is the fact that whereas our nett receipts on his becoming general superintendent were $134,208, they were last year $424,424, an increase of over 300 per cent. in five years. In Mr. Scherzer's place we have appointed Mr. Knutsen, who comes to us with very good recommendations from the Argentine North-Eastern Railway. Our short experience of Mr. Knutsen is in every way satisfactory. I am leaving for Salvador on the 5th of next month, and hope that my visit may be of service to the company. I now move the adoption of the report.

Mr. H. Hodgson seconded the resolution, and it was carried unanimously.

The appointment of Sir Charles A. Turner as a director was confirmed, and Mr. H. Hodgson and Mr. M. Ulcoq were re-elected directors. A vote of thanks to the chairman terminated the proceedings.

UNITED GOLD MINES OF WEST AFRICA, LIMITED.

An extraordinary general meeting of the United Gold Mines of West Africa, Limited, was held at River Plate House, Finsbury Circus, E.C., on Thursday, Mr. F. H. Bromwich (Chairman of the company) presiding.

The Secretary (Mr. George T. Broadbridge) having read the notice convening the meeting,

The Chairman, in the course of his address, said: Only within the last few days we have received an offer from substantial people who are willing to make a cash payment for an option on one of our West African properties, and who will if they exercise that option make us a further cash payment, besides giving us a considerable participation in cash or shares of their intended company. Another proof that the recrudescence of prosperity in West Africa may come earlier than most of us think lies in the fact that a director of a company owning property adjoining some of ours is now in West Africa carefully surveying his company's properties, and has in view, so I am informed, making us a proposition to amalgamate with our company in a manner which would involve no liability upon us. This gentleman has already wired us from West Africa that he has obtained a concession for cotton-growing there, and has offered us a participation therein, and, as you know, the cotton industry is regarded as having a big future, and the proposition would be carefully considered no doubt by the directors of the reconstructed company. I can only, therefore, think that you will all agree with me that it is in your interests that our West African properties should so far as possible be conserved and nursed, and we shall look forward with a feeling of confidence, especially if we are provided with a reasonable amount of working capital to meet contingencies, to turning them to very good account in the long run. With regard to the new business, you will recollect that at the last ordinary general meeting of the company in August, 1905, at which the late Sir Walter Buller presided, the proposal to acquire an interest in the Kaapsche Hoop Gold, Limited, was before the meeting, and the shareholders decided that your directors should, if possible, obtain an interest therein. It was decided at the same meeting that an interest in certain South American properties should also be acquired, and Mr. Mannheim, who was especially selected by Sir Walter Buller to go out to South America to report upon that property, gave such a satisfactory account of it that your directors did not hesitate in acquiring for you an interest in the syndicate owning it, and this interest is still one of the assets of your company. You have had sent to you the experts' reports upon the Kaapsche Hoop Gold, Limited. These were made by four different and independent engineers—namely, Mr. J. B. Garbe, Mr. W. Bleloch, Mr. D. Draper, and Mr. M. E. Frames—and while the wording of the reports necessarily differed, the net result of each is the same, as they are all in accord (and this is very unusual for so many experts) that it is a payable proposition, there is ore in sight of a value of some £880,000, and the cost of extracting the ore should not amount to more than 30 per cent., or at the outside 40 per cent. of the value. Basing our calculations on this estimate the Kaapsche Hoop Gold, Limited, ought to be sure of a minimum nett profit from ore in sight of some £600,000. The share capital of the Kaapsche Hoop Gold, Limited, is £175,000, of which £120,000 has been issued, and the balance is held in reserve for future issue. Of this £120,000 we shall acquire, together with our right of converting our debentures into shares, a majority of the share capital, which means that we should become entitled to something more than half the nett profits. Call it for the purpose of my statement half, which means a nett profit to us of £300,000. The Chairman concluded by moving the formal resolutions for the winding up of the company voluntarily, with a view to its being amalgamated with the Amalgamated Mining and Exploration Company, Limited, and the Vryheid Exploration Company, Limited.

Mr. George Macdonald seconded the resolutions.

After a lengthy discussion the resolutions were put to the meeting. The Chairman stated that he was not sure whether the resolutions were carried on a show of hands by the requisite majority, and therefore he would take a poll. This was at once taken, with the result that the Chairman declared the resolutions duly carried, 473,976 being for and 15,307 against. It was announced that the confirmatory meeting would be held at the same place—River Plate House—on December 17, at 12 o'clock.

SLATERS, LIMITED.

The ordinary general meeting of Slaters, Limited, was held yesterday at the Hotel Cecil, Mr John W. Reacher (the chairman) presiding.

The Secretary (Mr. F. Y. Northcote) having read the notice convening the meeting and the auditors' report,

The Chairman, in moving the adoption of the report and accounts, referred to the death of the late chairman of the company, Mr. John Crowle, which, he said, had been a great blow to them. The report and accounts, he said, showed a balance to the credit of profit and loss account for the twelve months of £42,460, inclusive of a balance of £5,257 which was brought forward from last year. It was a matter of very great regret to the board that the accounts showed so large a falling off in the profits, but at the same time it was a satisfaction to some extent this had been counterbalanced by a saving in expenditure. He pointed out that there had been a falling off to the extent of £1,200 in the interest received and dividends on investments, this being due mainly to the reduced dividends which had been paid by the United Carlo Gatti, Stevenson, and Slaters, Limited. He went on to show that the company had suffered very much from the prevailing competition in their class of trade, remarking that anyone accustomed to the streets of London would know very well the extent to which the number of middle-class restaurants had increased of late years. In fact, they had multiplied to an extent that was much beyond the present requirements of the population. The result of this was an ever-growing and constantly keener competition to be met by this company, and it had to be met by a reduction in the prices charged at their various depôts. It was a very unpleasant state of things, but if they were to retain their trade it was impossible for them to avoid doing so. It was particularly inconvenient to have to reduce prices at the present time, because they had also to face a general increase in the price of the chief articles they consumed. The reduction in their business might also be partly due to a habit of dining at fashionable West End restaurants, and to a growth of the habit of spending the week-ends out of London. Undoubtedly the glorious summer which they had enjoyed had militated against such establishments as theirs, because it had had the effect of keeping their customers out of London more than would otherwise have been the case. The general result of the year's business was that they proposed to pay a dividend of 12½ per cent. on the ordinary shares, which compared with 16 per cent. paid last year. It was no doubt a serious decrease from the shareholders' point of view, and it was due to some extent to a change in policy of the board. They realised that every economy must be practised, and at the same time they intended to pursue the enterprising policy which had characterised their work in the past. The Board of Trade returns showed that the country was in a more prosperous condition; in the North of England they were having booming times, and though the wave of prosperity had not yet touched London, there was every reason to suppose that it was not far off. They intended to keep on pegging away and developing their business to the utmost extent. He had no doubt whatever that there were better times in store for them. They had a very sound business, and he had no doubt that when he met them next year they would have a better story to tell.

Mr. William Kirkland seconded the resolution, which was carried unanimously.

In the course of discussion a shareholder urged that the board should compete more with the stores.

The Chairman replied that they did not contemplate opening stores, but everything would be done to increase the business.

The resolution was carried unanimously.

Sir John B. Slacke proposed the re-election of Messrs. J. W. Reacher and Alfred Slater as directors.

Mr. Kirkland seconded the resolution, and it was carried unanimously.

On the motion of Mr. Bird, seconded by Mr. Wright, the auditors were reappointed and the meeting terminated with a vote of thanks to the chairman.

FOURTH CITY MUTUAL BENEFIT BUILDING SOCIETY.

The cross transactions in the year ended September 30 resulted in increases of £8,836 to £244,482 in investing shares issued and £1,505 to £274,206 in deposits. On the other hand, advances on mortgages have risen by 35 to 1,397 in number and £5,002 to £519,368 in amount, of which £252,729 is in loans under £500. The society now has 15 properties representing £9,998 which have been in its possession upwards of twelve months, and has had to take over another seven, on which £2,834 had been lent, but there is nothing to grumble about in that, as the total of the properties in hand is under 2½ per cent. of the entire sum lent. Undivided profits for the year were £15,823 or an increase of £1,361, and after placing the usual £1,000 to reserve, making it £18,000, the directors transfer £500 to a suspense account for depreciation on Consols, &c., and pay the usual dividends, making 4 per cent. for the year on the original shares.

NEW VAAL RIVER DIAMOND AND EXPLORATION COMPANY, LTD.

Notice to Shareholders.

The London Board have received a cable, dated November [illegible], stating that at the Confirmatory Meeting held in Kimberley on November 27th, the Resolutions authorising the Debenture Issue and the increase of Capital of the Company were duly passed.

In the course of his remarks the Chairman stated:—

"It is intended to throw open for the present four square miles of ground for the purpose of leasing it to large Companies, Syndicates, and individual diggers.

"Of these four square miles, one square mile is to be allotted to a Syndicate which has been formed in London with £[illegible] Working Capital. They are to pay a yearly rent and a royalty on all finds.

"Two square miles will be allotted among smaller Syndicates who are willing to lease 500 claims or thereabouts, paying rent and 20 per cent. royalty.

"Several well-known practical mining men have applied for a very large number of claims on these conditions.

"One square mile will be allotted to individual diggers, who will pay 20 per cent. royalty and the ordinary fees for Claim Licenses.

"In all cases the water supply will be free, without, however, holding ourselves responsible for short supply, but as far as possible, we shall endeavour to supply ample water for all purposes.

"No decision has been arrived at as to the size of the area on the new discoveries which will be worked by the Company themselves.

"We shall treat the diggers liberally, but the interests of the Shareholders must be our first consideration.

"It is expected that the water plant will be completed by the end of February, but diggers will be allowed on the property before then in order that they may make preparation for starting work immediately the water supply is completed.

"The total number of claims applied for to the present date in Europe and Africa is 63,000, exclusive of another application for one square mile.

"If the property is largely worked, and the results are only one-quarter as good as in prospecting, the profits accruing to the Company will be very large."

Owing to the rise in the market price of the Shares since the inception of the Debenture issue (October 11th), the position of the Shareholders holding less than twenty-five Shares, and those holding fractions of twenty-five Shares has been brought prominently before the Directors, who fully realise that it is desirable to carry out some plan by which these Shareholders should be interested in the Debenture issue.

They are in communication with the Head Office to ascertain whether this can be done, and in what manner it can be effected, and it is hoped that a plan will be devised within a few days, when a further communication will be made on the subject.

By order of the Board,
E. MACHT,
London Secretary.

45, Finsbury Pavement, E.C.
November 28th, 1906.

FRIENDS OF
The Investors' Review
are respectfully reminded that the end of the year is approaching, a time when efforts are seasonable to extend its circulation, not only among Private Subscribers, but by bringing it before the Committees of Public Reading Rooms, Clubs, and other Institutions of the kind. Managers of Branch Banks through whose hands investment business passes will find it invaluable.

"THE INVESTORS' REVIEW" Office,
NORFOLK HOUSE, NORFOLK STREET, STRAND, W.C.

REPORT BY THE COURT OF DIRECTORS OF

The Royal Bank of Scotland

To the General Court of Proprietors on Tuesday, 27th November, 1906.

The Directors now submit to the Proprietors the annexed Abstract Statement of the Affairs of the Bank at the Second Saturday of October last, with relative Profit and Loss Account, certified by the Auditors.

The Balance of Rest at 14th October, 1905, was		£933,439 17 2
The net Profits of the year, after providing for all bad and doubtful debts, amounted to		242,781 7 8
		£1,176,221 4 10
The Midsummer Dividend, at the rate of 9 per cent. per annum, free of Income-tax, required	£90,000 0 0	
It is now proposed to pay a similar Dividend at Christmas and a Bonus of 1 per cent., which together will require	110,000 0 0	
There has been written off for expenditure on Bank Buildings	6,000 0 0	
		206,000 0 0
Leaving a Balance of undivided profits at credit of Rest of		£970,221 4 10

The Directors beg to intimate that, in exercise of the powers conferred on them by the Act of 1873, they have elected Mr. Leonard Walter Dickson, Chartered Accountant, to fill the vacancy caused by the lamented death of their esteemed colleague, Mr. James Haldane.

By Order of the Court of Directors,

D. R. W. HUIE, Cashier.

ABSTRACT STATE OF AFFAIRS at 13th October, 1906.

LIABILITIES.

To the Public:—			
1. Deposits with accrued Interest			£13,666,322 3 10

W. TEMPLETON, Accountant.

AUDITORS' REPORT.

As Auditors appointed by the Proprietors of the Royal Bank of Scotland, we have checked the Cash on hand at Head Office, Glasgow, and London, verified the Cash with London Bankers, the Securities for money at call and short notice, the Government Securities and other Investments, and examined the details of the other Liabilities and Assets set forth in the foregoing Abstract State of Affairs, and we now certify that in our opinion said Abstract State is a full and fair Balance-Sheet, properly drawn up, and exhibits a true and correct view of the state of the Bank's Affairs, as shown by the books, at 13th October, 1906.

JOHN M. HOWDEN, C.A., Auditor.
J. MAXTONE GRAHAM, C.A., Auditor.

The Investors' Review

EDITED BY A. J. WILSON AND SON.

Vol. XVIII.—No. 466. New Series. SATURDAY, DECEMBER 8, 1906. ("Registered as a Newspaper.") Price 6d.

PUBLISHER'S NOTICES.

The Investors' Review is a Subscription Journal, and will be delivered to subscribers in London by the first post, or sent to the country and abroad by the first mail, on Saturday Mornings on the following terms:—

One Year - £1 1s. Six Months - 11s. Three Months - 5s. 9d.

Short of Three months the Price is **6d.** per Copy *Inland*, and **6½d.** *Abroad, Post Free.*

Subscribers can change their address as often as they please, but notice of change must reach the Publishing Office not later than the First Post on Friday Morning.

For a fortnight before the Subscription expires the **Investors' Review** will be forwarded in a different coloured wrapper.

Cloth cases for binding the Half-Yearly Volumes price **1s. 6d.**, postage **4d.** extra. Bound Volumes **16s. 6d.**, or **17s. 3d.** post free.

Cheques and P.O. Drafts should be made payable to

CLEMENT WILSON,
"Investors' Review" Office,
Norfolk House, Norfolk Street,
London, W.C.

Investment Queries

Questions about Public Securities will be answered each week in the **Investors' Review** on the following terms:—

For each question thus answered the charge will be **One Shilling.** Where more than One Question is put they should be numbered, and a copy kept. No Security is ever named in the Answers Printed.

Private Letters giving fuller answers can be had if desired The minimum charge for such letters is **Ten Shillings** each; but for that Three Questions will be answered. For all additions beyond three the charge will be **Half-a-Crown** per query.

Lists of Investments furnished by correspondents will be annotated, or new lists of suggested investments will be supplied on the same terms, viz.:—**10s.** for the First Three, and **2s. 6d.** for each Additional one. But no group of securities forming a trust calculated to yield a given income will be supplied or less than **One Pound.**

The charge for Wires about New Issues appearing on days that prevent timely criticism in the **Investors' Review** will also be **2s. 6d.**, plus a prepaid telegram form.

The Editors cannot undertake to return rejected communications.

Letters from correspondents must, in every case, be authenticated by the name and address of the writer.

The Editors desire it to be understood that a charge is made for the insertion of reports under the heading of Company Meetings, and they cannot accept responsibility or statements made therein.

The Investors' Review.

"Imperial" De Beers.

Its glory is not waning yet, and the masters of a colossal, all-dominating monopoly can point to triumph on triumph. Last year a bigger heap of diamonds than ever was scraped out of the bowels of the earth by the forlorn wretches who toil there. And entrenched behind the buying syndicate the directors can still boast they fear no rivals, not even the Premier Diamond Mine, let it turn out its stones never so fast. What, indeed, has it to fear from competition when it has just made a fresh contract with the Diamond Syndicate, on more advantageous terms than before? We can only stand off and admire from afar, wondering if any power on earth can interfere with such dazzling omnipotence. "The diamond market still remains in a most satisfactory condition."—thanks to diamond drills and the *demi-monde*, no doubt. Does the syndicate lend out cut gems much? What is the aggregate value of its stock in hand or in jewellers' shops? We should like to see the Syndicate's balance-sheet, especially after the poor display made by the estate of the late lamented Herr Alfred Beit. He was a "life governor" of De Beers, and was supposed to be worth anything you like from £50,000,000 to £200,000,000. And his will was "provisionally" proved for a beggarly £3,000,000. There must be something wrong somewhere.

Well, perhaps, but all the more reason is that why the diamonds won in the year ended June 30 should fetch from the Syndicate some £800,000 more than the previous year's lot, at a total of £5,607,718. Dividends on investments, too, were nearly doubled at £37,790—which was a thin show for so awfully rich a company. Other revenue, which showed very little change, consisted of £27,977 interest on Consols, £18,525 from house and stand rents, £4,613 from "sundries," and £1,520 from transfer fees, making the staggering total of £5,698,144 in comparison with £4,895,443. Actual expenses at the mine in obtaining the larger output were heavier, for one million more loads were washed, and the reserve of blue ground on the floors was considerably increased—by as much as 2,622,441 loads—at a total of 7,096,700 loads. So the nett profit amounted to £2,193,962, an increase of £244,863, after providing nearly £300,000 more at £646,081 for depreciation, and redeeming £194,100 against £185,000 of debentures. At the end of June, 1905, the surplus carried forward was £846,784, but out of this has been paid the Colonial income-tax of £118,898 for that year, and £205,790—making £500,000 in all—has been additionally reserved to meet the English income-tax claim—a small help towards paying the bill for our great De Beers war—so the nett sum added to the profit is £522,095, compared with £697,684 a year ago. Accordingly, the available credit is only £69,274 higher at £2,716,058. So it was impossible to increase the deferred dividend, which again aggregated 20s. per share, and as a similar amount was paid on the preference shares, the whole required £1,800,000, the directors adding the £69,274 to the sum carried forward, which is £916,058. Nothing is put to the ordinary reserve.

The balance-sheet need not detain us long. It displays awe-generating wealth, and despite the big reduction of the debenture debt, the total is not much less than it was 12 months ago. Altogether, the amount

of debentures and other obligations redeemed aggregated £194,100, and this sum has been written off the various claims. The reserve fund invested in Consols now stands nearly £22,000 lower at £1,035,167, whilst other reserves, consisting of premiums £132,090, insurance fund £300,000, and a suspense account £70,118, total £502,207. In the previous balance-sheet the directors put £232,774 to an income-tax suspense account in anticipation of the claim made by the Inland Revenue Commissioners, and this they have raised to a round half-million, in the belief that it will cover the entire claim for the six years to March 31 last. Creditors on open accounts are owed £149,606 against £126,884, and there are the final dividends to pay, requiring £900,000. On the other side the book value of "property" is nearly £200,000 less at £6,698,801, but "investments" in stocks and shares advanced from £781,334 to £1,670,958. The Consols are given at their market value at the end of June, equal to the reserve above-mentioned, and have largely depreciated from the price of £1,178,000 at which they were originally bought. Another appreciable advance is shown in the value of the blue ground on the floors, which this time is £420,952 compared with £284,445, but timber, fuel, and other mining stores are about £323,000 lower at £257,336. Debtors have jumped from £178,423 to £574,385, including £400,000 of what looks like contango loans, a new asset. Diamonds on hand are said to be worth £352,431, there are bills receivable for £416,800, but cash has dropped from £242,409 to £10,853, mere small change for so potent a business. However, the directors will have no difficulty in borrowing or otherwise getting the money for the final dividends. So the balance-sheet now tots up to £12,653,505 against £12,793,370, only a trifle lower, notwithstanding the elimination of the £750,000 heretofore given as the value of the explosive works.

The dynamite factory at West Somerset has been formed into a separate company, called the Cape Explosives Works, Limited. It came into being on January 1 of the present year, with a capital of £500,000, in £1 shares, and £750,000 5 per cent. debentures, the principal and interest of which are guaranteed by the parent company. These shares and debentures the De Beers Consolidated will hold "for the time being," and the agreement with the principal mining groups in Johannesburg, whereby they will purchase at least one-half of their monthly requirements for seven years from September 1, 1903, has been ceded to the subsidiary. The construction of the Klerksdorp-Fourteen Streams Railway was completed last year, and it was opened for public traffic on April 5, 1906. In the balance-sheet there are £30,750 of bills payable accepted by De Beers on behalf of this railway company, and it also has cash on deposit at call amounting to £135,750. A year ago the sums were, respectively, £100,000 and £350,000.

The annual meeting of the company was held at Kimberley simultaneously with the sending out of the accounts to the shareholders on this side, presumably to allow them to read the report and the speech of Colonel Harris together, for a fairly long summary of the chairman's address has been cabled over to the Press. Some parts of it, where the Colonel predicts greater glories still for the company and definitely promises larger dividends, cannot but rejoice all healthy stomachs. There is actually in sight, said he, ground to a total of over 64 million loads, enough to last 11 years at the present rate of production, representing an estimated £64,000,000 worth of diamonds. Yet with all this wealth, more than enough to satisfy ordinary greed, the directors grudge to pay a small sum yearly in British income-tax. Unless the law here consents to exempt this monopoly from a tax which mere justice claims, we are threatened with ill-feeling between the colonies and the mother country. Colonials are not such fools. What has the De Beers monopoly ever done for them to justify self-sacrificing gratitude? How will a few thousands saved in income-tax, in order to benefit a limited number of capitalists, affect the prosperity of the colonies? To close the London office, as the good colonel threatened, to change inscribed scrip into bearer shares might create many inconveniencies to holders on this side, but it would not ruin the British Empire. The outburst, however, usefully serves to illustrate the peculiar type of Imperial ardour for which the diamond and gold potentates are becoming famous. However, these threats are only in the air at present; final decisions are postponed, and a little common-sense may meanwhile filter into the minds of the directors and the poor fleeced shareholders. "Ah, Gott, vee takes de diamants and goldt, and you pays, you British mans."

French Foreign Trade in 1905.

An interesting report upon the foreign commerce of France for the year 1905 and first half of 1906 from the pen of Mr. Consul-General Inglis has just been issued by the Foreign Office, based upon the statistics of the French Customs Department. These indicate that the gross value of the imports and exports of France taken together amounted to £494,560,000 in 1905, an increase of £35,920,000 on the preceding year, and of £40,520,000 on the average of the five years prior to 1905. Imports alone came to £242,480,000 or an increase of £13,600,000 on the preceding year and of £9,720,000 on the quinquennium. Exports were even larger at £252,080,000, being £22,320,000 more than in 1904, and £30,800,000 more than the five years' average. These figures relate to the gross trade, but if the statistics be limited to imports for consumption and exports of home produce, the exhibit is still excellent, both sides of the account combined showing a total of £385,840,000 or £27,720,000 more than in 1904. Imports alone came to £191,160,000 and exports to £194,680,000, one showing an increase of £11,080,000 and the other of £16,640,000. And it is interesting to note that of the import total only £34,760,000 represented the value of imported manufactures and £32,920,000 of food products, so that no less than £123,480,000 represented raw materials utilised in French manufactures, the increase being heaviest in raw materials, no less than £9,360,000, while in food products the increase was only £240,000 and in manufactures £1,480,000. It follows naturally enough that when we turn to the exports of purely French products, manufactures make the biggest exhibit, amounting to a value of no less than £109,920,000 out of the total above given. Of raw materials exported the total was £53,520,000 and of food products £31,240,000.

The United Kingdom has the largest share always in the trade of France, and that fact alone is a standing argument in favour of more intimate political relations between the two countries. Taking the weights alone we might think it was not so. Of the total weight of goods imported into France in 1904 England, thanks mainly to coal, contributed 26.06, whereas the weight of British imports from France, or French exports to England, was only 15.96 per cent. of the total weight of French exports, Belgium coming first. It stands second in the weight of exports to France. This, however, is a misleading exhibit, and incidentally the contrast between weights and values emphasises the soundness of the Free Trade point of view, because a small weight of exports to the United Kingdom represents a large money value, indicating that a great proportion of the price consists in value added by French labour. Last year the value of the imports of France from the United Kingdom was £23,700,000 or £2,760,000 more than in 1904, in spite of the tariff, but the existence of that tariff marred the trade in many classes of goods of medium value. Next in rank stands the United States, from whence France imported £20,492,000 worth, and there the weight is small compared with the value, amounting as it does to only 3.56 per cent. of the total, owing probably to raw cotton and high-priced minerals. The exports of France to the United Kingdom are valued at £50,248,000, which is nearly £20,000,000 more than the value of the exports to

Belgium and over £25,000,000, beyond the total value of the exports to Germany. As they stand there is a lop-sidedness in the figures of the trade between France and the United Kingdom which is not particularly agreeable, but it affords an irresistible argument in favour of efforts to reduce friction or to lower the barrier by which the trade is impeded. Were France delivered from the incubus of militarism, and were the two countries able to trade on an approach to a Free Trade basis, the wealth of both might be indefinitely increased. As it is, both countries profit enormously by the interchange of their products, and we not least, in spite of an obstruction raised against us by the French tariff and the French shipping laws. It is all very well, therefore to talk about the *entente cordiale*, and to exchange visits of municipal authorities and high personages of all kinds, but the practical minds in both countries should devote their strength to economic reform, to such an accord between the countries as might enable both materially to lower the cost of their Governments, and pave the way for something like Free Trade between them. There is really no more economic ground for the retention of the Customs barrier set up by France against us and the other countries of the world, but especially against us and Belgium, than there would be for the maintenance of an octroi barrier between the South of France and the North, with the Loire, say, as dividing line. But militarism is overlord and must have money.

France does not appear to benefit by her colonies to an extent which makes them valuable possessions. Her trade with Algeria is substantial and on the increase, but last year the aggregate of imports and exports was under £22,000,000, and the entire trade of France with Indo-China was under £5,500,000. Tunis also gave only about £4,850,000 to the commerce of the Republic out and in. Contrast this with some figures relating to the colonial trade of the United Kingdom. The figures for 1905 show that with Canada the total value of British trade out and in was about £37,000,000, with Australia also about £37,000,000, and with New Zealand almost £18,000,000, these figures including the re-exports of foreign and colonial merchandise. The aggregate trade of France with all her possessions amounted last year to little more than £43,500,000, whereas the exports of British and Irish produce alone to possessions under the British flag amounted in the same year to £114,217,000, and the aggregate trade out and in with all British possessions, including re-exports, reached £251,000,000 or about six times that of France with her vast possessions. That her trade will develop in many of these regions we have no doubt whatever. All the resources of Senegal and West Africa remain to be developed, as well as most of those in the great territory of Indo-China. Madagascar may also be expected to become a larger customer for French productions, and to be a greater producer of commodities for export in years to come. Our colonies are mostly old in comparison with the newer possessions of France, but none the less is the present cost of maintaining the empire of the Republic immeasurably in excess of any direct benefit arising therefrom, and we cannot help thinking that the existing navigation laws of France have something to do with the inexpansiveness of French colonial trade. Foreign vessels are not allowed to participate in the trade between France and Algeria, or in the carrying trade connected with the cod fisheries, or in the trade with Tunis, and the bounty system applied on such a lavish scale to the French ocean mercantile marine does much to prevent her sharing in that miscellaneous business between country and country which always springs up where the carrying trade is comparatively free. Therefore 90.44 per cent. of the goods imported into France last year from her colonies and dependencies was carried in French ships, and 97.72 per cent. of the goods exported thither. In spite of this overwhelming preponderance in the privileged trade no less than 66.83 per cent. of the over-sea traffic with other nations was carried in foreign bottoms, and the French share increases but slowly, if at all. The Protectionist remedy is "higher bounties," the Free Trade one "greater liberty, less coddling." For all that French foreign trade continues to grow, and for the first six months of this year shows an increase of £9,174,000 in the value of the imports and of £4,694,000 in that of the exports compared with the first half of last year.

Economic and Financial Notes and Correspondence.

London County Council Finance.

We are glad to see that the enlightened members of the London County Council are waking up to their duty in relation to the bloated City Corporation and livery companies. A breeze sprang up at the Council meeting on Tuesday over the ignorant and not very honest efforts constantly being made by the reactionary party busy helping the B.E.T. and other monopolist combinations to mar or wreck the work of the Council. It had the useful effect of bringing out some facts recited by Sir Edwin Cornwall. Since 1904, he said, the Council's rate had gone down ¾d. in the £, while, in the whole of the six years between 1901 and 1906-7, it had only increased by 2d. in the £, in spite of the fact that the former nett relief from the Exchequer contributions of 1½d. in the £ has now practically disappeared. The education rate, however, has gone up 4½d. in the £ since 1901, and by 3d. since the Council took over the work, but it is in no sense to blame for that increase, for it had to take over not only the schools of the old School Board, but the non-provided schools. The return also showed that the central rate in London had gone up 8¼d. in six years, and this had been mixed up with the Council's rate in the usual fashion with which the yellow Press has made us familiar. Of that increase 4½d. was due to education, ½d. to the Asylums Board, ½d. to the Central Unemployed Committee, and ¾d. to the common poor rate, the last three items not being under the Council's control at all. That there is extravagance in some of these directions we have no doubt whatever, but all this has nothing whatever to do with the great public undertakings which the Council is carrying out for the benefit and profit of every citizen, or with the fact that its own administrative work has been on the whole conducted with remarkable economy. However, the reactionaries were not satisfied, and so Mr. Mackinnon Wood had to intervene by pointing out that the City Corporation had a pretty heavy debt, most of which was secured on old City property, which ought to be the property, not of the City, but of the whole of London. This evoked great cheering, and no wonder. There lies the goal towards which the reforming citizen must march. Millions are wasted and misapplied under the shield of the unreformed corporation of the "square mile" in the heart of London, and eating the heart out of it.

Is this a Practicable Suggestion?—No. 2.

A number of letters have reached us upon the problem set to subscribers and readers last week. A selection from them is made room for in this issue, but it is otherwise so crowded that we must postpone a number of letters and all the discussion until a later date. So far the answers seem to point to a strong majority in favour of the proposal outlined a week ago, but some correspondents—notably the able and experienced writer of the letter printed first below—appear to think that no harm would be done by naming the securities about which questions are answered in each week's issue. That we confess surprised us a little, but, as the friendly critic whose grumble started this discussion says in another critical but instructive letter we have received, but which he does not wish to see in print, we have no desire to "crucify" ourselves. He adds, "There are quite a number going about, as you know, who would like to

do it for you gratis." That surely is not so, but if it be it is so much the worse for the malignants, and what we quote this phrase for is in order to intimate that we shall be quite ready to meet the wishes of subscribers in any reasonable way, and without imposing upon them undue charges. May we add that investment business alone will be dealt with? It was in no small measure because speculation forms so enormous a proportion of the "short view" gambling business done by outside brokers that we decided to have nothing to do with it. Ours is the "long view" always. May we add that names and addresses are omitted as a protection to the writers?

Dear Sirs,—As you ask for the opinions of subscribers on the question of circulating definite advice, I send mine. Like your correspondent of last week, I always sympathise with the man who wants to know the names of the securities you are discussing in your answers. I differ in opinion from yourselves with very great diffidence, but I fancy you exaggerate the extent to which any resultant buying would raise prices. Even if it did the market for that security would probably be stronger and healthier for the process, instead of being neglected and liable to bear attacks.

Viewing the question broadly there ought to be some feasible mean between your present policy and an actual "supervision" of one's private investment list. I doubt if the latter would appeal to the many. The average man, while anxious for information and advice, likes to do his own deciding and keep his business to himself. To many such it is a cause of regret that your unrivalled information and wide views cannot be made greater use of. Life is too short for frequent writing of special inquiries; and, personally, I should have thought it best to treat the inquiries you *do* get as a fair index of the subjects that interest your readers, and to answer them freely and publicly as is done in the *Financial Times*. In saying this I fear I am on rather delicate ground though, and if you adhere to your previously expressed objections to this course, I for one should be glad to consider any proposal for a special subscription to the confidential sheet suggested by your correspondent.

Your obedient servant,

London. Nemo.

As a reader and latterly as a subscriber to your Review, I cordially welcome your suggestion in last week's issue. And I shall be glad for one to become a subscriber to any reasonable scheme such as is discussed. If I might suggest, why not give your readers some idea of what you would undertake for, say, a yearly subscription of £5—with regard to (1) a private circular at intervals; (2) private advice by letter, and (3) even by wire, and then the subscriber could make up his mind whether he would pay in advance £5 or £10, and extra amounts should this sum be exhausted. Several times recently had I had an open account with you I should have either written or wired for your opinion as to certain investments, but feeling that we did not know one another (?), and being uncertain whether to bother you or not, I let the opportunity slide, very likely to my own loss. I should also welcome an occasional trust all the more if at first it was *sent to subscribers privately*, and your candid opinion from time to time thereon would be invaluable.

Further, why shouldn't your subscribers to this scheme let you know of any local causes affecting companies which you are known to be watching and thus offer for your consideration news of interest to those subscribers who might be interested? The idea seems such a good one that I trust you will be able to make it take practical shape, and I shall wait further developments with interest.

Meanwhile, I do wish you could find room in your paper to discuss the present position and prospects of London Electric Supply companies, Rubber and Tea companies, Oil companies (at home and abroad), Investment companies.

Any of these companies you consider likely to do well as far as present figures can be gauged. Also Canadian railways, and their prospects.

It seems so evident nowadays that unless you keep in close touch with market reports and how each company is doing you are almost certain to get left. There seems all the more scope for such an information bureau as you propose, and if by means of local correspondents you could extend your sphere, your scheme should surely be an entire success.

Please excuse long letter, but you asked suggestions, didn't you?

Edinburgh, Dec. 4, 1906.

I should be very glad to subscribe to such a scheme if the fee were within my means. I have repeatedly invested on the strength of your criticism of balance-sheets, and am much obliged to you for the sound judgment in your criticisms. I have often wished you would express more often a definite opinion that such and such things were suitable for investment. What occurred to me in the present question is the following difficulty:—It seemed to me, with reference to the "Mines Trust" alluded to, that some of your correspondents regarded your advice solely from the short-speculation point of view, and indeed some of your replies to correspondents convey the same impression. Of course, that is a matter which does not concern me personally. But when you frankly say you are "urged to enter into competition with *these bucket-shops*," one rather wonders whether you contemplate changing the investment character of your advice for something of the more temporary speculation kind. I think this should be made clear. I do not think you intend anything of this sort, and should be sorry if you did. Subscribers to the scheme would benefit, but the character of the Review would be changed. I am not a business man, and write as one of "The Investors' Review public" merely.

The difficulty of adapting your advice to the requirements of two classes of people—investors and speculators—seems great. My own idea is to invest for a year as a minimum.

With many thanks for sound advice in the past.

Leeds.

On page 672 of this week's issue you ask for opinions on a correspondent's scheme there set out. Mine is distinctly favourable, but I think you would have to make your charge for the printed sheet outlined by your correspondent a uniform one, and not too high. I should think a five-guinea subscription would bring three or four times as many subscribers as a ten-guinea one, and as the printed sheet was the same for all, the profit would be greater. From this special body of subscribers you would no doubt have a continual stream of special inquiries, for each of which you would charge a sufficient fee extra, and as the larger the number of special subscribers was the more numerous would be these special fees. That again is an argument for the £5 5s. subscription.

Yours truly,

J. M. R.

London, Dec. 4, 1906.

Dear Sir,—Owing to a change of address I have only just received my Review of last Saturday's date, and feel much interested in your new scheme *re* extending the scope of your valuable financial advice, and should it come to anything, shall be glad to be one of the new subscribers.

I do not know how the financial part of the scheme would work out from your point of view, but as a possible subscriber I would deprecate cheap advice, and consider the £5 5s. per annum mentioned in the letter to you as too low to be effective. I would suggest that each subscriber sends you in list of his investments, with a guinea per annum per investment, with a minimum, say, of £12 12s.

Say a hundred subscribers at this rate would give 1,200 investments, and as many would occur in several lists there should not be more than 300 separate securities. On these you would keep a specially watchful eye, and each month would send a letter to each subscriber, giving your views and advice on his holdings, leaving him to act as he chose.

Of course, in the event of any sudden change a special and extra letter could be sent. I do not doubt you will receive many letters on the subject, and out of the multitude will be able to evolve the best possible scheme.

While writing you I should like to express to you my sympathy in the matter of the contemptible letter published by you some time back *re* a mining trust which miscarried. It would occur to any ordinary man of sense that, if the expenditure of a few shillings would ensure a profit of hundreds of pounds, then you would number your subscribers by millions, and you would yourself soon give up the cares of financial journalism.

Yours faithfully,

E. D. P.

Lancaster Gate, W.,
December 5, 1906.

As you have asked for your subscribers' opinions about your article, "Is this a practicable suggestion?" I send you mine.

The proposal of your correspondent is excellent, and if you agree to it there will be, I should think, plenty of your subscribers who will be willing to join the "confidential sheet."

I propose that the annual subscription should be £10 10s., and the number of subscribers limited to the first 200 of subscribers to your Review who may inform you that they wish to join the "confidential sheet," and then any other subscriber to the Review who might wish to join the "confidential sheet" would have to wait till one of the original 200 withdrew from it or died.

The 200 to agree not to divulge any of the information in the "confidential sheet."

The "sheet" to be issued weekly, advising (as your correspondent proposed) what might be bought, and at what price or about, and what previously advised might be sold.

Any subscriber wishing for further particulars than the weekly "confidential sheet" gave could write you for the private letter at 10s., as stated in the first page of your Review.

If you decide on issuing the "sheet" on conditions somewhat similar to the above, I am willing to subscribe to it.

Yours very truly,

N. E.

Margate,
December 3, 1906.

I write to say that I should be only too pleased if you would follow the suggestion of your correspondent, and take charge of your client's monetary business, and help them in their investments. To many, like myself, quite ignorant of the standing of

various securities, it would be a great boon to have the advice of an expert in whose integrity we have absolute confidence.

Yours truly,

F. T.

Totnes,
December 3, 1906.

I, for one, should hail with delight any such confidential advice by circular letter or otherwise as to my own investments. I do not see why it should not only pay expenses, but even bring you a handsome profit if run on sound lines, but these should not be based on any *fixed* annual subscription per subscriber, for obviously the wealthy investor would be paying no more than the poor one. Surely a rate of, say, 1s. *per cent.* per annum would pay well. Thus if I asked for advice on investments of £1,000 I should pay 10s., and so on in proportion; on the other hand, supposing ALL the £1,000 were in *one company* or security you might equitably charge less than the 10s. fee. But, as you say, this is a matter for future and careful consideration. In any case I think the idea an excellent one, but a fixed fee of 10 guineas is very much more than I could personally afford to pay.

ANON.

Rochester,
December 3, 1906.

Referring to the articles in last week's (November 24) issue, "A grumble about answers to correspondents," and last Saturday's query, "Is this a practicable suggestion?" on which you ask the opinion of subscribers, I would venture, as one of some years' standing, to say that I agree with the "grumbler's" argument and your inability to meet his wishes in the way indicated.

Allow me to propose an alternative method.

(1) Give your answers to correspondents as at present, but to the name of each inquirer asking as to the merits of a security add an index number. This, however, is not an essential part of my scheme.

(2) The week (or fortnight) following that on which your reply appears give a key to what securities you have referred. Thus all your readers will benefit by the information given, and your inquirer will have seven or 14 days' start in which to effect his deal.

Yours truly,

J. A. H.

Southsea,
December 3, 1906.

MANILA RAILWAY RE-ORGANISATION.

We have scrutinised with some care the scheme just submitted for the re-organisation of the Manila Railway Company, and must confess to some little disappointment with its details. It is well known that since the Philippine Islands were purchased by the American Government from the Spaniards, the company has been continually pressing for a settlement of its claims both against the Spanish authorities and the present owners of the islands. All efforts, however, to secure compensation for the damage done to the property, and for the use of the line during the Philippino insurrection have failed, and, as a matter of fact, the very existence of the company seems to have been threatened. The Washington authorities clearly desired that everything connected with the future of the Philippines should be strictly American, and far from meeting the just claims of this company seemed disposed to give concessions for competing lines to some United States for Philippine corporations. Tenders were actually invited in furtherance of this aim, with the promise of assistance from the United States in the shape of guarantee on capital. It was at this stage that Messrs. Speyer stepped in, and in exchange for a controlling voice in the councils of the Manila Railway Company, agreed to advance the necessary money for the construction of some 87 miles of lines, so that the company might preserve its position. Later on Messrs. Speyer presented a bid for the construction of various lines in the island of Luzon, and although these were not accepted, subsequent negotiations resulted in this financial house receiving a concession for the building of the tracks. This authorisation was given to a company called the American Manila Railroad, and it is now proposed to transfer the property of the existing Manila Railway to the new enterprise. It will possess certain advantages not at present owned by the old company, such as favourable rates of taxation, a perpetual concession covering the whole of the lines in place of the limited one at present existing, and freedom from the claim on profits which used to belong to the Spanish Government. In order to carry out the plan, yet another company is to be formed, to be known as the Manila Railway Company (1906), which will act as a holding or securities company. It will issue its securities against those of the present English company and also against the bonds and shares of the American company to be issued to obtain the necessary money for the construction of the new lines and other purposes. This 1906 company is to have a share capital of £4,000,000, divided into 200,000 5 per cent. preference and 200,000 ordinary shares of £10 each, and the borrowing powers will be £6,000,000, in equal amounts of "A" and "B" debenture bonds. The present issue is to consist of £1,600,000 "A" and £1,730,000 "B" bonds, and authority is to be taken for the issue of further amounts of £250,000 of each class to pay interest on the debenture bonds after the new lines are in operation for such period as the trustees shall consider reasonable. Power is also to be taken for the issue of further amounts of bonds for the construction or acquisition of new mileage over and above that at present contemplated, these issues to be limited to £5,000 of each class per mile and to £50,000 per annum for other capital purposes. It is proposed to deal with the securities and shares of the new company as follows:—

4 per cent. "A" debenture bonds—
In exchange for the securities of the present company .. .. £1,25[illegible]
Issued to provide funds for the requirements of the plan* .. .. 34[illegible]
£1,60[illegible]
Reserve for future construction and equipment .. .. .. 14[illegible]
£3,00[illegible]

4 per cent. "B" debenture bonds—
In partial exchange for the securities of the present company .. £[illegible]
Issued to provide funds for the requirements of the plan* .. .. [illegible]
£1,73[illegible]
Reserved for future construction and equipment .. .. .. [illegible]
£[illegible]

Preference shares—
In exchange for the shares and securities of the present company £1,15[illegible]
Issued to provide funds for the requirements of the plan* .. [illegible]
£2,00[illegible]

Ordinary shares—
In exchange for the shares of the present company.. .. .. £[illegible]
Reserve for new company .. .. [illegible]
£2,00[illegible]

Now, it is estimated that the construction of the 240 miles of road will cost approximately £3,100,000, of which £2,670,000 seems to be provided as indicated above. What, however, we are not quite clear about is the ultimate destination or use of the total sum of £2,162,800 which is to be "issued to provide funds for the requirements of the plan." Who is to get this huge amount of money, and to what exact purposes will it be applied? It goes without saying that important payments are due to those who provide the money for carrying through this scheme, but it does not seem possible that over £2,000,000 can be so applied. We now come to the proposal for the exchange of existing securities for those of the new company, and cannot, perhaps, do better than set out the details in the following manner:—

Existing securities and shares will receive for each principal sum of £100—

Existing Securities.	New 4 per cent. A Debenture Bonds.	New 4 per cent. B Debenture Bonds.	New Preference Shares.	New Ordinary Shares.	Cash.	And also for Accrued Interest on the Securities up to Dec. 31, 1906.
	£	£	£	£	£ s. d.	£ s. d.
5 per cent. first mortgage registered shares	112	—	—	—	—	1 16 8
6 per cent. prior lien mortgage bonds series A ...	120	—	—	—	—	3 0 0
6 per cent. prior lien mortgage bonds series B...	115	—	—	—	—	3 0 0
6 per cent. secured notes.	112	—	—	—	—	3 0 4
6 per cent. debentures .	—	100	100	—	0 0 0	—
7 per cent. cumulative preference shares	—	—	150	—	—	—
Ordinary shares	—	—	—	200	—	—
Deferred shares.	—	—	—	—	—	—

The interest charges on the debentures to take the place of existing securities will be £93,200, thus reducing the

annual interest charges by about £15,000 per annum, but on the entire bond issue the interest charge will be some £240,000 per annum, and this does not hold out a very bright prospect for the holders of preference shares. These are given at the rate of £100 for each £100 bond to the 6 per cent. debenture holders, together with £6 in cash, in satisfaction of their 93 per cent. of dividend arrears, and we have to remember that the preference shares to be given in exchange for existing securities of the same class form part of the issue, so that if the estimated revenue of £308,000 by the end of 1912 is realised, only £68,000 per annum will be available for dividend on £2,000,000 of preference capital, giving, say, 3 per cent. As at the same time these debenture holders have their interest permanently scaled down from 6 to 4 per cent. it cannot be said that they are accorded very generous treatment. The existing preference shareholders seem to fare much better, and so far as one can gather, those responsible for the entire proposals are well looked after.

Rhodesian Banket Company.

Two years after the formation of the company the directors of the Rhodesian Banket have issued their first annual report. Shareholders may or may not appreciate this act of kindness, but they will hardly be favourably impressed with the report itself. For it tells them very little, and this little is in striking contrast with the market rumours they have heard from time to time. True, the directors send out simultaneously copies of Mr. Cyril E. Parsons' reports on the Eldorado mine, but these are far from satisfying, and give no confirmation whatever of the alleged wonderful richness of this property. No gold has been won yet; at any rate, if any has been produced there is no trace of revenue from it. A certain amount of development work has been done on the claims, but the principal energies of the directors on this side seem to have been directed to lending money on the Stock Exchange and in promoting subsidiaries. Mr. Abe Bailey, one of the vendors, is not a director, but the share register has enlightened us as to the part he has consistently played in realising his holdings. The directors are not in a position to present a profit and loss account, and, looking at present indications, it may be many years before they can hope to get a decent income; indeed, it is as likely as not they may never do that, and whence they are to earn dividends will puzzle many folk. From the date of registration in October, 1904, to June, 1906, the company received £3,064 in interest, mainly on contango loans, and £110 from rent, and as general expenditure in London and Africa is put at £7,136, this first balance-sheet shows a deficit of £3,962. A brilliant result this, after all the talk and boast! The first subsidiary was floated in November of last year, and was given the name of the West Rhodesian Banket Company, a prospectusless concern. It has an issued capital of £350,507, in £1 shares, of which £300,000 was paid for 1,142 claims, and £50,507 was subscribed for working capital. According to the balance-sheet, the parent company holds 97,002 shares in this, entered in the books at £96,171. What they would fetch if sold we do not know, for we have never seen a quotation for the shares, and know not what kind of people would buy them. In the report we are told nothing of this West Banket thing, maybe because there is nothing to tell, in which case reticence is the better part of discretion. In the course of ages we may have a report and accounts from this bantling itself, but we shall not cherish too ardent expectations, lest we be disappointed. The other subsidiary has just recently been formed, but of this we shall say a word presently. On looking at the balance-sheet of the parent company, it is impossible to be favourably impressed with its display of wealth. Cash is £2,895 only, and the sum owing by debtors, £3,686, is as much again as that owing to creditors, and the only free resources are the contango loans of £30,000. But seeing that the company is subscribing £50,000 to the new subsidiary, it is puzzling to guess whence the money will come.

A fortnight or so ago a circular informed the world that the Eldorado Banket Company had been registered with a capital of £250,000 in £1 shares. We gave the particulars at the time, and noted that the usual procedure was adopted of floating the company without a prospectus. After the lapse of two or three weeks the directors have actually issued one, and as a Rhodesian prospectus is so rare a thing in this world, we are almost tempted to preserve it as a curiosity. Our first almost unconscious questions were: Why have the directors published such a document? Why this unusual mode of action? Are they tardily and reluctantly yielding to public pressure? If so, it may be a good sign. Perhaps the cold reception given to the thing when it was briefly announced in a circular has compelled them to adopt this more open policy, in the hope that it may remove the unpleasant impression made. There is precious little hope or likelihood that it will do anything of the kind, for the public have already made up their minds as to the worth of Eldorados. The capital is £250,000, in £1 shares. Of this, £139,000 goes to the vendor company for the claims acquired, £36,000 to the Chartered Company for its interest, £50,000 will be subscribed by the parent concern, and £25,000 will be offered at par to the shareholders in the Banket Company. Thus it is proposed to raise, if possible, £75,000 for working capital. We wonder how many shares Mr. Abe Bailey, Dr. Hans Sauer, and other Rhodesian conjurers will take in it, and how the parent company will find the resources to subscribe the working capital. There is little doubt the money will be scraped together somehow, seeing that one or two other Rhodesian companies are large holders of Banket shares. But it will involve working the market later in order to peddle out the shares to the public, if they will have them. But even with the help of those financial editors of Sunday and other papers, who also hold shares in the company, it will be more and more difficult in future to tempt and feed the public by mere rigging. Rhodesian "Bankets" are no longer enticing, even to the ignorant and greedy.

London and River Plate Bank, Limited.

It is not usually a good thing for important institutions to issue shares at par when a substantial premium can be obtained, but such a course means a nice turn for the shareholders, and when it became known the other day that this first-rate bank intended to offer to the proprietors 20,000 shares of £25 each at their nominal value, the price of the existing shares was promptly marked up £6. The proprietors will get one new share for every three now held, and where the holdings do not admit of an exact ratable allotment the shares representing combined fractions will be sold, and the nett premium obtained divided ratably among the shareholders entitled to the fractions. Fifteen pounds per share will be called up in three equal instalments, spread over the first six months of next year, and these instalments will, instead of dividend, receive interest at 5 per cent. per annum until September 30, 1907. After payment of the dividend on the existing shares for the half-year then ending, the new shares will rank *pari passu* in every way with the existing shares. In addition to all this the directors propose certain alterations in the articles of association, one of which will increase the present directors' remuneration by £2,000. This is to be done in view of the greatly increased business of the bank since its establishment 44 years ago. It has undoubtedly made very great strides in that time, and the condition of Argentine business was so good during the twelve months ended September 30 that the bank earned a gross profit, after providing for bad and doubtful debts, of £560,950, being an increase of no less than £120,520 compared with the previous twelve months. There was also an advance of fully £10,000 at £44,325 in the sum brought in, making the total £605,275, against £474,686. Management charges and income-tax rose by £54,970 to £270,331, and £9,000 more at £72,000 was distributed by way of interim dividend. The sum

now for disposal is therefore £66,619 larger at £262,943, and after again bringing up the total dividend to 20 per cent. for the year, the directors add no less than £100,000 to reserve and £10,000 to benevolent fund, carrying forward a trifle more at £44,944. Last year £25,000 was applied in reduction of premises, but nothing went to reserve. The balance-sheet reveals some rather important changes, the largest movement on the debit side being an increase of £1,726,772 to £19,269,754 in the deposit and current accounts. Acceptances under all heads have fallen by £640,048 to £3,183,476, and the bills advised, being drafts in transit, have been reduced from £1,752,052 to £1,425,051. Bills for collection are also lower at £1,716,559, as also is the item of Buenos Aires clearing banks £536,767, both these figures having per contra entries. Cash on hand, at bankers, and at branches of £6,722,148 is larger by £170,938, and the bills receivable, bills discounted, advances, securities, &c., have been increased by £522,525 to £19,434,957. Bank-premises, including furniture, are about £25,000 less at £171,673, reflecting the allocation made a year ago, and the aggregate of the balance-sheet comes to £28,582,104, compared with £28,091,257.

Champion Reef Prospects.

Shareholders in the Champion Reef Gold Mining Company will doubtless read the annual report of the directors with much eagerness, to see what hope there may be in an improvement in prospects. For a year or so they have had to endure much anxiety, which is not ended yet, owing to the fall in the grade of the ore, the reduction of dividends, and the persistent decline in the price of the share. Is there a possibility that the value of the ore will improve, and that future profits will equal those of the past? are the questions asked, and shareholders will impatiently turn to the report for an answer. An answer of a kind is given, so far as one can be given, but it is too indefinite and equivocal to end suspense. On February 8 last the directors sent out a circular in which they could point to improvements in the lode at several points indicating a favourable change. Unfortunately these favourable signs did not last, and while from time to time certain points have looked promising the improvements have not been such as to allow of a resumption of the former rate of returns. Mr. Gifford's report shows that great quantities of ore have been opened up in the past year, but of a lower average grade than in recent years. At Carmichael's shaft the drivages on the lode at the lowest level show a width of 2 ft. 3 in., and a value of 19 dwts. 8 grs. of gold per ton, while at Rowe's the deepest level has disclosed some rich quartz near the northern boundary, demonstrating that shoots of higher quality hold down to the deepest points worked. In the light of such facts and the knowledge of the occurrence irregularly of impoverished sections in the upper part of the mine, and in other mines working on the same reef, followed by richer discoveries below, the directors feel they have strong reasons for looking forward to the opening up again of ore of better quality. This is all. Though it does not sound very encouraging, there is still hope, and one can only wait and see how things turn out. Those who have faith enough to hang on to their shares may not hereafter regret it, while those who sell out because prospects look so uncertain may live to repent it. The mine is now in that position where the chances are exceedingly speculative.

Turning to the results of the past year's working a total of 203,174 tons of quartz was crushed for a production of 150,633 ozs. of bar gold, of an average yield of 14 dwts. 20 grs. per ton; in addition 207,143 tons of tailings and slimes were treated for a recovery of 27,008 ozs., making a total return of 177,641 ozs., realising £678,706. The profit was £347,609, out of which the dividends for the year totalled 2s. 3d. per share, equal to 90 per cent., compared with 4s. per share, or 160 per cent., in the year before. There was a decrease of £16,887 in the total working costs, due chiefly to the reduction in the quantity of ore raised and milled, likewise to a saving in the milling and cyaniding costs per ton. The scheme of centralising the crushing plant has been further advanced, and the whole of the output is now dealt with in one mill, the result being greater efficiency and economy. Reserves of ore are computed at 383,071 tons, an increase of 4,155 tons upon the estimate of the previous year. An opportunity now presents itself, says the report, of obtaining on reasonable terms a three years' working option over seven mining blocks comprising an area of 852 acres in the Dharwar district of the Bombay Presidency. Subject to an examination of the property and a report thereon by Mr. Thomas Richards, the directors propose to enter into an agreement on the following terms:—The price of the option to be £5,000 in cash and an undertaking to spend not less than £24,000 in the three years on the development of the property. In the event of the option being exercised the purchase consideration to be £30,000 in cash, inclusive of the above-mentioned £5,000, and (a) shares of the Champion Reef equivalent, at the selling price of the day on which the option is exercised, to £40,000; or (b) the sum of £40,000 in cash, or (c) should a new company be formed for the purpose of acquiring the property, £40,000 in shares of such company, whose capital is not to exceed £250,000, of which £75,000 is to be reserved as working capital.

Barrett's Brewery and Bottling.

This company's business has been gradually drifting down hill for a good many years now, and we are not quite sure that Messrs. Plowman and Co., another bottled beer company, are acting quite wisely in taking over the concern, even though they get it at a comparatively cheap price. It seems that negotiations for the transfer have been in progress for some time, and the sale of the business involves a very heavy sacrifice on the part of Barrett's shareholders. A new company possessing a capital of £112,500 divided into 82,500 5 per cent. preference and 30,000 ordinary shares, all of £1 each, will be formed, an issue also being made of £40,000 4½ per cent. debentures. This concern will take over all the assets and liabilities of both companies, Barrett's preference shareholders receiving for each share, £2 10s. paid, 8s. in cash and £1 in 5 per cent. cumulative preference shares of the new company. As to the ordinary shareholders they are to get 2s. in cash and 5s. nominal in the new preference shares, meaning a sacrifice of something like 43s. per share, measured against the par value of existing holdings, but since the market value is only about 2s., or the equivalent of the sum to be now received in actual cash, the immolation is more apparent than real. Many advantages will be derived from the amalgamation, the directors say, including an all round saving in expenses and fuller utilisation of Barrett's extensive plant and premises. In order to carry through the scheme certain alterations will be necessary in the articles of association, and a meeting is called for December 10 next to give consideration to the proposals.

United States Currency and Banking.

Many interesting particulars are given in the report of Mr. Shaw, Secretary to the United States Treasury, submitted to Congress along with the President's Message, about the banking system of the United States and the volume of currency in the country. Taking currency first we learn that within the fiscal year ended June 30 last there was an increase of $186,867,000 in the monetary stock of the country. Of this $118,051,000 was gold, $5,450,000 silver, and $65,393,000 National Bank notes. Treasury notes, however, fell off by $2,027,000. Altogether on July 1, 1906, the money in circulation amounted to $2,730,047,000, or $32.32 per head of the population. By October 1 last this total had increased to $2,812,154,000, or $33.08 per head, and of this immense amount of money 43.6 per cent. was in gold. On March 1, 1900, the paper circulation of $10 notes and under was $720,063,000, and

by October 1 last this had risen to $1,087,788,000, being an average annual increase of $56,000,000, or £11,200,000, and still the supply was not equal to the demand.

Equally interesting are the figures relating to the National Bank notes. Since that system of banks was established in 1863, no less than 8,380 of such banks have been chartered, and of these 6,189, with a capital of $841,865,000, are alive to-day. During the period, however, 488 National Banks failed and 1,743 were placed in voluntary liquidation, creditors of these banks having on the average received 78 per cent. of their claims. During the year ended September 30, 1906, 450 such banks, with an aggregate capital of $21,261,000, were chartered, and no less than 309 of these banks had a capital of only $25,000, or £5,000, while 141 had capitals of $50,000 and over. On September 4—the dates jump about in a perplexing way—there were 6,137 associations, presumably banks, in operation, with a paid-up capital of $835,067,000 and surpluses and profits of $670,815,000, surpluses amounting to $490,245,000, or nearly three times the amount required by law. Surpluses and undivided profits together came to over 80 per cent. of the paid-up capital. The total liabilities of the banks reached $8,016,021,000, or, roughly, £1,603,000,000, and of this about $4,200,000,000 represented individual deposits, that is to say, the deposits amounted to about £840,000,000, but this is exclusive of Government moneys, the aggregate of which lodged with selected banks varies considerably, and was $124,089,000 on October 1 last. Loans and discounts granted by these National Banks amount altogether to $4,299,000,000, and they held United States bonds to the value of nearly $629,000,000, besides other bonds and securities worth $701,241,000. The specie held aggregated $464,437,000, of which about $364,000,000 was in gold and gold certificates, and $161,575,000 in legal tenders. Yet the cry is for more and ever more money, a proof that the speculation indulged in by the stock markets is much in excess of the actual resources the paper values are supposed to represent. The Government, however, is also in a false position towards the banks, and has continually to devise expedients whereby the money accumulated by the Washington Treasury can be released for employment in the country's business or speculation. It is said, for instance, that Mr. Shaw is now going to pay the interest on the National Debt in advance up to March next, with a view to relieving the intolerable strain now felt on Wall Street.

The Puny Bottomley.

Horatio Bottomley, M.P., disappoints us. The Official Receiver reports that the great financier's Joint-Stock Trust and Finance Corporation, Limited, has failed for only £458,123 5s. 7d. We call this a beggarly result, and with reason. Surely a conjuror who could "buy" the Basingstoke Canal for £10,000 and inflate the capital forthwith to £250,000 might have done better! Of this proposed capital, £150,000 was to come to the Bottomley Trust company and £50,000 to the ever-renowned Ernest Terah Hooley. And that was only one little deal. Readers of this Review may remember those "unique inaugural" and other peculiar "stock operations"—some of them to their cost—whose only result seems to have been to enable £40,744 to be conveyed to Bottomley's private account by December 12, 1904. And there was the "selected" mine, not to mention other things, all surely capable of greater results in the way of coined gold extraction. But all the merry hoodwinker could do with his opportunities was to pile up the above-mentioned deficiency. It is a paltry product of a great endeavour, and the only consolation extractable is that the deficiency is apparently quite genuine, for the Official Receiver, from whose report we draw these facts, roundly alleges that the creditors of the Trust "can only receive a small dividend, if any, and no return of capital to the shareholders can be expected." Perhaps the word-spinning prophet has not done so badly after all, then, for does not the Trust hold investments in shares to the figure of £292,783, including the shares of the Basingstoke Canal? There, at least, we have the genuine Bottomley finance, only, why, oh, why, is the deficiency less than a million?

American Business Notes.

Again the New York Associated Banks are beginning to reveal the straits to which they are often put by the operations of the master players upon Wall Street. Their return for the past week showed an increase of $5,084,000 in the loans, while the deposits went up by only $670,000. Credit was, therefore, created for the purpose of being utilised to draw away cash, to provide further money for the interior, and, perhaps, to pay off loans contracted abroad. Probably the interior drain was the principal cause of the small increase in the deposits, since specie held fell off by $3,329,000 against an increase of only $542,000 in the legal tenders held. The general reserve, therefore, lost $2,787,000 on the week, and the surplus reserve was reduced by $2,954,000 to $1,454,000 against $2,565,000 this time last year. No wonder that money has been up to 25 per cent. on Wall Street within the last few days. This has occurred in spite of the efforts made by the Standard Oil people to prop the market. One of the most suggestive incidents with which the ingenuity of New York financiers has recently supplied us is the way the Union Pacific Railroad Company's credit has been utilised to provide many millions of contango money to sustain Wall Street. The Union Pacific has sold or pledged bonds to a large amount, and used the money to contango Standard Oil paper. This fact probably explains in great measure the curious state of affairs revealed by recent weekly bank returns. Instead of being dumped upon the banks, the stock lifted off the London market has been intercepted, and carried by the Union Pacific Railroad and other complaisant servants of the oil crowd. And this incident certainly goes to indicate that, however wealthy the Standard Oil group may be, their commitments are so stupendous as to make their position often ticklish enough. Theirs is a financial "sky-scraper," most flimsily constructed in its upper stories, no matter how solid the foundation may be.

There is an apparent magnanimity in the way in which the railway companies and several of the trusts have come out with announcements of rises in wages to their employees. It seems, however, that they were only taking time by the forelock, as the employees were known to be organising to demand higher raises than those given. The basis of their intended demands was the higher cost of living, which has been going up by leaps and bounds during the past year, but specially within the last six months. A comparison prepared by one of the New York papers, and published on November 18, puts the matter in a nutshell :—

Articles.	Former Rates. cents.		Now. cents.
Cheese .....per lb.	10 to 12	....	15 to 20
Potatoes .....per brl.	$1.50	....	$2.26
Poultry.....per lb.	12 to 15	....	20 to 25
Fresh fish.....per lb.	10 to 12	....	15 to 20
Salt fish .....per lb.	9 to 12	....	20
Eggs .....per doz.	25	....	35
Butter .....per lb.	23	....	30
Veal and mutton....per lb.	10 to 12	....	20
Milk.....per qrt.	4 to 7	....	7 to 10
Shoes.....per pair	$2.50	....	$3.50

Other things have gone up in proportion, and unless there is a considerable reduction in price within a reasonable time, a demand for higher wages and salaries than those now given is inevitable. The price of coal retailed in small quantities has gone up $2 and more a ton, and by the ton is $1 higher than two years ago. Following, as this increased price of everything has, on the "trust-bursting" activity of the President, it is telling heavily against the Republican party among the masses, and had a good deal to do with the losses sustained by it in many of the recent elections.

The success of the Democratic ticket in all but its head in the recent elections in the State of New York has caused some stir among the Republican officials responsible for the escape of so many of those concerned in the insurance and other scandals. The New York District Attorney, Mr. Jerome, has sent in a report on his inquiry into the affairs of the Mutual, and is now going into those of the New York Life. He states in regard to the Mutual that he found great difficulty in getting full information, and corroboration was impossible. He throws much of the blame on the State Superintendent of Insurance, Kelsey, and believes that an examination into the vouchers and names of the persons to whom the political fund payments were made would disclose an extensive system of corruption. At the same time he absolves himself from responsibility on the plea that "the law does not impose any general duties of a visitorial character on District Attorneys in reference to any class of corporations," and in the case of insurance companies devolves those duties directly on the Superintendent of Insurance. The whole of Mr. Jerome's argument is exculpatory as far as he himself is concerned, and goes to show that the laws nominally intended to protect the public are little better than pretexts for creating offices at high salaries for officials whose business it is not to be too inquisitorial into the doings of the Hydes, Alexanders, Depews, Schiffs, McCalls, and McCurdys in the execution of their public duties. It is this benevolent neutrality of public officials that is at the bottom of the defalcations and scandals that have been going on in the United States ever since the advent to power of the Republican party under President McKinley in 1896.

The frenzied speculation in mining shares now going on in New York and Boston is responsible for the promotion of more than 350 mining companies, with a capitalisation of over $900,000,000 this year, small companies, with less than $1,000,000 capital not being reckoned. In five hours on one day recently the shares of 18 new mining companies were quoted on the New York kerb. Many of these companies are incorporated in the State of Nevada, some in Canada and in the State of New Jersey, but most of them in the State of Maine, where a company without any limit as to capital may be incorporated for registration fees of $15 and $10 to a lawyer.

There is beginning to be a sentiment that the boom over the Cobalt silver mining enterprises in Ontario, Canada, is being overdone. In New York a case is given in which a company had been floated with an enormous capitalisation, which was not known to own a single mining property in the district, but the public in all the big cities of Canada and the United States appear to have gone crazy after the stocks, and it is feared that the reaction will work disastrously for many small investors in both countries.

The exports from the United States to Japan and China for 1906 show a material decline from those of 1905 for the eight months ended August last. The exports to China fell from $42,390,996 to $22,316,216, and those to Japan from $39,174,682 to $20,752,377. The explanation of the loss of trade with China is, of course, found in the boycott, and that with Japan is attributed to the cessation of the war, during which that country imported heavily from the American Pacific ports.

Following on the announcement that Mr. Thomas F. Ryan, known for his connection with the Equitable Life Insurance Company of New York, had secured important concessions from the Belgian Government and King Leopold in the Congo Free State, came another, saying that he was to give up his presidencies and directorships in some score of companies, in order to devote himself more closely to his new responsibilities. The concessions include not only the exploitation of the india-rubber forests of the Congo, but a franchise for the construction of a railway, and mining leases over a territory believed to be rich in copper and other minerals. The rubber concession goes to the American Congo Company, which has just been incorporated, and places over 8,400,000 acres of rubber-producing territory at its disposal. Among the members of the company are Mr. Ryan himself, the Messrs. Guggenheim, who are also interested in copper mines in the west and in silver mines in the Canadian Cobalt region, Mr. H. Payne Whitney, E. B. Aldrich, son of Senator Aldrich, of Rhode Island, and John D. Rockefeller, jun., which means that the Standard Oil Company has its finger in the Congo pie. The election of Mr. Ryan's nominees on the new board of the Equitable Life Company also connects the surplus of that company with the Congo.

The same gentlemen who are interested in the Congo rubber concession, with, it is said, the exception of Messrs. Aldrich and Rockefeller, have in hand the formation of a mining company for the working of the mining concession. Mr. John Hays Hammond, who is the general manager of the Guggenheim Exploration Company, and another in the same company will have much to do with the mining matters. The explorations already made are said to prove the existence of extensive and valuable deposits of copper, with silver, gold, and other minerals. In some quarters there is believed to be a sinister political motive behind King Leopold's concessions to this American group, but the fact that it has behind it such enormous money resources as are at the disposition of the Standard Oil, the Equitable Life, and the numerous other companies with which Mr. Ryan is connected is of itself an indication that it was to obtain the co-operation of those great aggregations of capital unhampered by political considerations, such as would have been the case with European capital, that led to the arrangements lately concluded.

Mr. Ryan will remain on the directing board of the Morton Trust Company, of which he is first vice-president; the National Bank of Commerce, of which he is vice-president and director; the Newport Trust Company, the Union Exchange Bank, and the Washington Life Insurance Company. He will also retain his stockholdings in the various companies, numbering over 20, from whose directorates he has withdrawn. The New York *Press*, on account of the manipulation by Mr. Ryan and his trustees, Mr. Grover Cleveland, Mr. George Westinghouse, and Mr. Morgan J. O'Brien, of what it calls "the farcical election of directors in the Equitable Life Insurance Company," calls on the newly-elected Governor of the State of New York, Mr. Hughes, and the State Legislature to expel Mr. Ryan from the Equitable.

The important announcement is made from Chicago that when the Pacific Coast extension of the St. Paul railroad is completed, in 1908, the company will undertake the express business now being operated by the American Express Company, whose contract over the St. Paul system will then expire. With this object in view, an express company, with a capital of $30,000,000, has been incorporated under the laws of the State of New Jersey, and its shares will be distributed among stockholders. The shares are described as carrying with them very valuable rights.

The formal opening of new structural steel works at Mariner Harbour, Staten Island, New York, took place on November 10. The plant is one of the largest of the kind in the United States, and has been three years in building and equipping, involving an outlay of over $8,000,000. It is the property of Milliken Brothers.

Passing Events.

Canada is going ahead, and according to the Ottawa correspondent of the *Tribune*, the Government of Sir Wilfrid Laurier is going to recommend to Parliament the application of a substantial bounty to encourage the development of the Canadian steel shipbuilding industry. Large shipbuilders are said to be prepared to consider the establishment of yards on the Canadian coast if sufficient encouragement be given. Is this a chance for some of our Clyde, Tyne, and Barrow firms? They ought to be able to get the benefit of these bounties if the money given is large enough.

Reuter's agent also says that $100,000 is to be voted in aid of cold storage warehouses throughout the country, and to provide for the handling of perishable food products to be exported to the United Kingdom. This is expected to result next year in the investment of quite $1,000,000 in undertakings of this kind. Thus is progress on stimulants made sure.

Shareholders in Oroya-Brownhills have of late been deeply concerned over the steady decline in the price of the share. This seems the more mysterious and inexplicable as the company is still paying substantial dividends, and the mine is apparently doing as well as ever. Rumours are current in the market that the rich ore will be worked out in a very short time, say, in a year or two, and there may be much in this, for at the last annual meeting it was admitted that only two years' supply of rich ore was in sight. It is well-known, on the other hand, that some 40,000 shares held by the late Mr. Loeffler are overhanging the market, so dealers have naturally put down the price of the share. The company has lately acquired a new mine on the Black Range goldfield, the prospects of which are highly spoken of, whilst the latest news is that negotiations are proceeding for a working agreement with the Central and West Boulder. According to expert opinion the Australia East lode continues right through the Central and West Boulder lease, so a good body of ore may eventually be opened up. Some shareholders think an explanatory statement should be issued by the directors, and something of the kind seems advisable to end anxiety on many important matters.

According to the usual monthly table, published in the *Investors' Chronicle*, the past month showed a slight arrestment of the depreciation in the Kaffir Circus. The 44 representative shares selected have an aggregate issued capital of £33,047,840, the market value of which, on November 26, was £70,308,489, in comparison with £69,661,458 on October 24. Thus there was a nett improvement of £647,031, equal to 0.9 per cent. Though, however, there was this insignificant rally, the total is considerably below the figures for the preceding months. At the end of September the aggregate market value was £75,345,419, £86,840,329 at the end of August, and £154,509,049 at the mid-December account, 1904, when prices were at their highest for the post-bellum period.

We were unable to go and inspect the exhibition arranged at the Chartered Company's museum early in this week of models, plant, and so forth connected with the Victoria Falls power scheme. It does not seem to matter much if what a Reuter's telegram from Johannesburg states is true—that the Transvaal Government has refused the application of the African Concessions Syndicate for rights to construct an electric power line through the Witwatersrand. That surely blocks the way to the Allgemeine Electricitäts Company, and we really cannot imagine what the object of all this display and agitation is. Do the Chartered directors want something to help them to gloss over another sorrowful year, whose accounts we are waiting for, whose story cannot fail to be dreary no matter how garnished?

We have not much interest in President Roosevelt's Message, which is strenuous, emphatic, not to say strident in places, but mostly of domestic interest. We may, however, note here the fact that the Federal budget for the coming year 1906-7 provides for an expenditure of £138,000,000. This is nearly £2,500,000 less than the estimates for the year now running, but still a very handsome total, and we shall look at the details with interest. Conspicuous amongst the increases of expenditure are £1,550,000 for the army, £3,334,000 for the navy, and nearly £8,500,000 for public works, this last being presumably in the main attributable to the Panama Canal enterprise. Altogether the estimates are nearly £13,300,000 more than those sent in a year ago, but £2,505,000 less than the actual sums voted and embodied in the Appropriation Bill which governs the current year's outlay.

Signor Majorana, the Italian Finance Minister, in unfolding his budget for 1905-6, announces a surplus of £2,540,000, or £2,120,000 more than the estimate. This, however, does not mean free income left, but the nett surplus or balance is put at £1,200,000, and for the year 1907-8 the estimated surplus was put at £680,000, and is not expected to be less than £800,000. A Bill is to be submitted authorising the expenditure of £24,400,000, which, added to the amount already authorised, would make a total of £36,400,000, to be devoted to the extension and improvement of the State railway system. The money is to be raised by the issue of certificates bearing 3½ per cent. interest instead of 3.65 per cent. as at present, and the money is to be repayable in 40 years. All this debt is to be raised in Italy, and the fact that such a transaction can even be contemplated indicates the immense progress made by the kingdom since it ceased to pant after a colonial empire.

A communication justifying the additional debt to be created by West Australia has been received by us from the Agent-General. We have not space to print it entire, but may state again that the money is said to be wanted for reproductive works, such as a mining railway—which should be supported, the contention is, by British shareholders in the already existing mines—and railways to open up districts suitable for agricultural settlers. The land within the range of profitable carting, this memorandum says, which has been fixed at about 15 miles from a railway, has already to a very considerable extent been taken up. To give scope for new settlers, therefore, agricultural spur lines are to be thrust into districts where there is now neither accommodation nor people to use it. Each 15 miles of new agricultural railway built brings 30 miles of agricultural land within the carting limits. That is all quite right, but how is the colony going to attract settlers?

That Victoria Falls Power Co., Limited, seems to be getting on. We hear it will shortly issue a prospectus, which is a very meritorious step on its part, inviting subscriptions in this country for its preference capital. This will be done in spite of the fact that, as we have already mentioned, the company has been refused powers in the Transvaal. The private Bill designed to further this enterprise by sanctioning a line from the Victoria Falls and feeder lines throughout the Rand promoted by the African Concessions Syndicate some months ago was withdrawn because of the local opposition it encountered. Application for that line's extended powers was subsequently made, and this also the Transvaal Government has refused on the ground that the company is not carrying on any works. Then application for leave to erect a steam station on the property of the Jupiter Gold Mining Company was formulated, and has yet to be heard. If granted, however, this will not give the company power to distribute its current. Certain necessary powers, we hear, cannot be dealt with until the elected Legislature of the Transvaal has got to work. As matters stand, therefore, the debentures which the Victoria Falls Power Company proposes to issue on the Continent do not appear to be secured upon anything substantial. However, the promoters may be quite satisfied to go forward with the scheme on the chance that the franchises asked for will sooner or later be granted. Should this chance never come off, where will the debenture and preference shareholders stand? We hope the promoters of this fantastic-looking enterprise will clear this up before issuing the prospectus.

Since the reconstruction the Palace Theatre has had a fairly successful career in spite of continuously growing competition, but it evidently does not satisfy a certain section of the shareholders. The directors have been served with a requisition to call a special meeting for the purpose of discussing their fees and the general affairs of the company. A committee of investigation is asked for, and we have no doubt that the object of the dissentients is to effect changes in the management and direction, but we do not know that the shareholders are likely to benefit from such a move at the present moment.

Critical Index To New Investments.

SIDI SALEM ESTATES OF EGYPT, LIMITED.

The Egyptian Investment and Agency, Limited, has formed this company with a capital of £412,386 5s., divided into 103,000 ordinary shares of £4 each and 7,725 founders' shares of 1s. each, to acquire about 14,000 feddans of land from the Société Anonyme de Behera at the nett price of £E38½ per feddan. Just where these estates are situated is not explained, and the prospectus altogether is a somewhat curious document. On the front page of it, for instance, the capital is given as above, but in the text we find that of the purchase price £E20,000 is to be repaid to the Agency, £E200,000 satisfied by an issue of 5 per cent. cumulative preference certificates, and the balance in cash, half this month and half in February. The actual amount paid is not stated, nor is there any attempt to give even an approximate idea of the profits to be derived from working the estates. All is vague, yet the ordinary shares were offered for subscription at a premium of 5s. per share. Of the founders' shares, which are entitled to 25 per cent. of the profits after a non-cumulative dividend of 5 per cent. has been paid on the ordinary, 5,150 were allotted to the Agency for underwriting the issue, and the remainder to the Agency and Messrs. Fratelli Salinas as promoters.

QUEENSTOWN DRY DOCKS, SHIPBUILDING, AND ENGINEERING CO., LIMITED.

The business of the Channel Dry Docks, Shipbuilding and Engineering Co., of Passage West and Rushbrooke, Ireland, is acquired by this company for £115,000, including £6,890 for goodwill, of which £35,000 is to be paid in cash and the balance by the allotment of the entire share capital of £80,000. An issue of £50,000 5½ per cent. first mortgage participating debentures, entitled to a further 1 per cent. in each year that not less than 7 per cent. is earned on the ordinary shares, was offered for subscription to provide for the purchase of stock-in-trade and stores valued at £5,000, and for additional working capital. Profits are given for the eight years to February 28, 1906, after making such adjustments as the accountants considered necessary, but before charging anything for management charges, interest or depreciation, and seem to have fluctuated considerably, the highest figure having been £11,373 in 1901 and the lowest £6,194 in 1905. The last recorded year, however, saw an improvement to £10,193, and the average over the whole period works out at £9,415, or more than three times the amount required to cover the debenture interest.

ANGLO-COLOMBIAN INVESTMENT CO., LIMITED.

Formed in December, 1904, to acquire the assets of the Anglo-Colombian Investment Company, Gold Estates of Colombia, Obdulia Silver Mining Company, and certain of the assets of the Gold Fields of Colombia, this company has a capital of £200,000, divided into 30,000 priority shares and 170,000 ordinary shares of £1 each. Of these 18,000 priority shares, which are entitled to half the profits until they have received £1 per share, when they become ordinary shares, were offered for subscription with a commission of 100 per cent. in ordinary shares and so far 17,370 have been taken up, while 127,423 ordinary shares have been issued, mostly in part payment for the properties taken over. The directors consider that the mines should be more energetically developed, and as they want more working capital for the purpose, another 12,630 priority shares were offered for subscription on the same terms as before, *i.e.*, a bonus of one ordinary share will be given with each priority share. Extracts from the manager's report, summarising the work done during the period from January 1, 1905, to June 30, 1906, state that the ore reserves in the Obdulia and Santana Mines are worth £65,000, a figure which has since been increased to £70,000. Notwithstanding the incomplete state of the equipment, 171 tons of concentrates had been shipped, the invoice value of which was over £4,000, and the directors pin their faith to the manager's estimate in the original prospectus of a profit of £15,000 to £18,000 per annum, when the necessary expenditure has been made on plant and development. Practice and theory, however, do not seem to accord, and the fact that such a heavy bonus has to be offered stamps the proposition as decidedly doubtful.

STEPNEY SPARE MOTOR WHEEL, LIMITED.

This is apparently a contrivance consisting of a rim and tyre intended for temporary use in motor-cars in the event of a puncture, for which great things are claimed by the inventors. We are told that by sheer merit and with little advertising the output has been increased from 7 wheels per month in January, 1905, to about 1,000 per month in August, 1906, and that there is practically an unlimited market for the invention. The wheel may be all that it is said to be, but this assertion, coupled with a statement of profits for three months only, seems a poor basis for the formation of a company with a capital of £120,000, out of which £95,000 goes to the vendors. Of this amount the inventors take £28,000 in cash, £2,000 in cash or shares, and £40,000 in shares, and the promoter, Mr. E. A. Trapnell, takes £2,000 in cash, £8,000 in cash or shares, and £15,000 in shares. No estimate of the value of the works acquired by the company seems to have been considered necessary, and it is merely stated that £5,000 is deemed to be paid for goodwill. Subscriptions were invited for 60,000 shares, leaving 5,000 for future issue if required, and of these 15,000 were underwritten for a commission of 10 per cent., a fact which renders it hardly necessary to say more.

CHESTERFIELD TUBE CO., LIMITED.

This company acquires from the Cornhill Contract Corporation, Limited, the patents for the McTear process for the manufacture of weldless steel and other hard metal tubes, together with the business and works of the Universal Tube Co., Limited, of Chesterfield. Its capital is £175,000, divided into 75,000 6 per cent. cumulative and participating preference and 100,000 ordinary shares of £1 each, and £40,000 in 5 per cent first mortgage debentures, and the whole of the preference shares and debentures are offered for subscription. Both issues have been underwritten, the debentures for a commission of 4 per cent. and a procuration commission of 1 per cent., and the preference shares for a commission of 8½ per cent., but subscribers to the latter are also to receive a commission of 6 per cent. on the shares allotted to them. The property at Chesterfield is valued at £46,150, and for it the Universal Tube Company receives £36,150 in cash and £10,000 in ordinary shares, while the Cornhill Contract Corporation takes £8,000 in cash and £90,000 in ordinary shares for the patents. Reports by various experts on the McTear process speak very highly of the results obtained, and as the demand for weldless tubes is exceedingly large, the company should do well, especially as, by the purchase of the Chesterfield works, it gets on to the Admiralty, War Office, and other Home and Foreign Government lists. One of the directors of the company, who is also a director of Mather and Platt, Limited, has gone into the matter carefully with the assistance of Mr. George Garrett, J.P., of the Waverley Steel and Iron Company, and these gentlemen are of opinion that when the works are fully equipped with the new plant the profits should reach a figure sufficient to pay additional dividends on the preference shares, after providing for debenture redemption.

Messrs. Ind, Coope, and Co.'s accounts for the year ending October 6 last will show that the amount owing by the company to their depositors will be found to have been considerably reduced, the total amount owing by the company on October 6 last on this account being approximately £160,000, as compared with £240,000 in October, 1905, and £320,000 in October, 1904. The company have registered an issue of premium bonds, carrying 5 per cent. interest and redeemable at £3 per cent. premium (the whole issue being payable over a period of ten years), and they hope therewith to deal with a large proportion of the deposits now remaining.

TRADE AND PRODUCE.

Wheat.—Crop reports from the Continent and other foreign countries are mostly of a favourable character, and although in the United Kingdom the land remains rather wet, rendering the growth of winter wheat liable to a check the demand continues on a rather small scale. The London cargo market opened steady with a very small inquiry, and the rates were maintained with some difficulty, La Plata sorts having an easier tendency. Imports into the United Kingdom for the past week were 377,020 qrs. against 423,030 last year, bringing the total for the season to 5,429,829 qrs compared with 5,594,640. Farmers' deliveries in the week reached only 60,299 qrs. or fully 33,000 qrs. less than last year, but the average price has been something like 2s. 7d. lower at 26s. 1d. For the current season, which has now run fourteen weeks, the deliveries from farmers have been 942,135 qrs. compared with 1,233,134 qrs. last year. Northern markets, after opening with a rather easier tendency, became strong on better American advices, and less favourable weather reports from Argentina, but dealings never became very important. Dornbusch estimates the quantity of wheat and flour on passage to the United Kingdom at 2,010,000 qrs. against 1,915,000 last week, and to the Continent only 1,520,000 qrs. compared with 1,780,000. A slight decrease in the visible supplies caused the New York market to commence with a fairly steady tone, and buying of a moderately good character was reported. Orders from the North-West and small coverings by "bears" helped to sustain the market, and Bradstreet's weekly statement showed a smaller increase than was expected. The quantity in sight east of the Rockies is estimated at 76,000,000 bushels against 75,919,000 last week and 62,402,000 a year ago. The Chicago markets were also fairly strong on "bear" covering, and good speculative support, prompted by the decrease in visible supplies and smaller worlds shipments than expected.

Wool.—The wool market has been fairly animated all the week and staplers have moved large parcels at higher prices. London sales are showing a keen demand for all markets, and there are fears that colonial wools will hardly arrive soon enough to meet readily all demands in the next few months. Though manufacturers are getting higher prices they are hardly equal to the increased cost of wool. The supply of Belgian yarn, which was interrupted by the strike of Belgian spinners, has been resumed, but prices have been advanced. Topmakers remain firm for forties, crossbreds and merinos. Consumption is good, and holders are confident that the value will be maintained until the arrival of the new clip.

Linen.—The demand for flax has been steady at farmers' markets, though here and there a quieter feeling has been observed. Prices show no material change. Business in Irish yarns has been of fair extent, while values have further hardened. Tow yarns have attracted most attention, and in almost all counts prices show an appreciable advance. Weft lines in all numbers, nearly the whole way through, have advanced fully 1½d. per bundle. Deliveries from foreign spinners have become less satisfactory; it would seem as if their local demand was accounting for all they can produce. The market for brown linens, &c., has been quite strong, with an increasing inquiry in most directions. There is little doubt that if a regular supply of yarns could be contracted for on the basis of reasonably early delivery the turnover in the manufacturing end of the market could be greatly increased, but with spinners fully booked up for from nine to twelve months it is difficult to see whence relief can come.

Cotton (from our Manchester correspondent).—There have been few signs of activity in this market during the past week, and the total sales in cloth and yarn may be described as generally unimportant. A quiet period seems to have set in, and buyers for the most part appear quite content to look on. Shippers of cloth abroad state that the prices held for by manufacturers cannot be obtained on the other side, that is, for lots of quantity. The raw material has again fluctuated, but the changes on the week are not important. Spinners still find difficulty in getting desirable grades, and the number of "points on" is a serious item. The various outlets of India have provided a miscellaneous business, chiefly in small lots. Bombay has shown the most life, but no large transactions have occurred. A little business has been arranged for China in fancy cloths, such as brocades. Scarcely any headway can be made in arranging transactions in staple goods. The Far Eastern markets have not shown much life, and the Continental outlets have bought sparingly in a miscellaneous class of goods. The engagements of manufacturers vary considerably. Burnley manufacturers state that the business coming round means a very lean margin of profit. Glossop goods are firmly held owing to fairly extensive order lists. T-cloths and Mexicans are generally well held, but in the poorer descriptions some producers are running down in engagements. The home trade houses are receiving complaints from retailers that clearances are disappointing in heavy goods, and they are being asked to keep goods back. In American yarns for home use a quiet trade has transpired with few orders of weight. Engagements for spinners are rather running down than otherwise. Shipping bundles still move off slowly. Some producers of 40's mule will soon want fresh orders. A fair inquiry for the Continent is again reported, but the turnover is somewhat reduced. Gassed yarns continue in request for Japan. Bolton spinnings have hardened with the rise in the raw material, and business has been restricted. Spinners are in a decidedly strong position.

Cotton in New York opened weak 12 to 15 points lower, chiefly on bearish private crop estimates. A rally ensued, and prices advanced a few points, helped by shorts covering, with bullish crop estimates and bull support. The close is quite firm.

Coal.—Business in the coal trade is still very quiet, mainly due to the mild weather. Seaborne has been in fair request, but nothing to speak of. Since Monday about 12 cargoes have arrived in the Thames. Best is quoted at about 17s. and seconds at 16s. Steam coals are just steady, and there is no change to note in the Welsh market. Quotations are:—Best Admiralty, large, 15s. 6d. to 16s., f.o.b., Cardiff; Durham unscreened bunkers, 10s. 3d. to 10s. 9d., f.o.b.; best West Yorkshire, 11s. 6d.

Iron and Steel.—Buoyancy bordering on excitement still characterises th iron and steel trade, and demand is so great that makers can with difficulty compete with it. Indeed, prospects would seem to indicate a famine in iron, as it is not possible for producers to increase their output materially. Manufacturers are booked up with orders which it will take them many months to execute, and are refusing fresh ones at current prices. The production of pig-iron for the current year is likely to be the largest in the history of the industry. Reports from all centres speak of expanding consumption, with an upward tendency in prices, which is bringing buyers in the market who have been holding off in the hope of a drop in prices. Cleveland warrants have advanced, and the price is now about 65s. 7d. cash. Activity also prevails in finished iron and steel, and sellers of iron bars have raised their quotations. At a meeting of the West of Scotland makers of iron and steel bars at Glasgow on Monday it was agreed to raise the prices by 10s. per ton, due to the exceptional demand which has sprung up for the export of all classes of Scotch iron manufactures.

Copper.—The inquiry for refined copper is said to have broadened considerably, and American producers, in view of the strength of the market there, are very reserved. Some people think that the market will remain free from further manipulation, and that its future course will depend chiefly on the question of supply and demand. There does not seem to be any indication of reduced consumption, and although the exceedingly high prices now prevailing are leading to the development of further mines, it is considered doubtful if any of these can put copper on the market during the coming year. American advices were again very good, and a continuance of speculative support, together with "bear" covering, caused prices to open at a substantial advance. Business continued fairly brisk, with prices steadily moving up, but near the end of the week a pause in the speculative demand, coupled with a break in the quotation for tin, caused a slight reactionary tendency. Values, however, recovered again before the close, and prices were £103 10s. for cash and £1 more for three months forward. Messrs. Henry R. Merton and Co., Limited, give the visible supply as 14,243 tons against 12,979 tons a month ago. Total supplies for November were 28,168 tons, and the deliveries 23,904 tons against 28,048 tons and 27,552 tons respectively for October. The stocks in England and France are 7,618 tons again 7,904 tons a month ago, and the Chile charters total 2,750 tons.

Tin.—In spite of an advance in Eastern quotations, this market opened decidedly weak, and metal was again realised in large quantities from one or two special quarters. The lower prices which resulted attracted a few small buyers and a slight rally ensued, but the support was not nearly equal to the selling, and a resumption of speculative liquidation, coupled with an absence of eastern buying, soon brought about a further severe fall. Quotations dropped a couple of pounds in a very short time, but a natural reaction set in before the close, and with some disposition displayed to cover sales, prices picked up again to £105 for spot and £105 15s. for future delivery. Messrs. A. Strauss and Co. give the visible supply as 12,825 tons against 11,778 tons a month ago. Stock and landings amount to 1,336 tons against 2,456 tons at the end of October The monthly deliveries in London were 1,281 tons, and in Holland 736 tons, making together 2,017 tons against 2,551 tons for the previous month. The Straits shipments total 4,366 tons, of which 2,370 tons are for London, 1,410 tons for America, and 586 tons for the Continent.

Tea.—Supplies of Indian tea were again large at 48,290 packages, and although quotations were fairly firm the market became less active on Wednesday, and some of the better qualities closed rather easier. Messrs. Gow, Wilson and Stanton, however, report that common leaf was keenly competed for, and in many cases marked a further advance, with the result that the average for the week remained unaltered at 8.06d., but compared with 7.10d. a year ago. The Ceylon auctions displayed the same tendencies as the Indian market, the greatest demand being for common qualities, but the average price came out better at 8.79d. against 8.67d. a week ago and 7.64d. last year.

Sugar.—The May quotation fluctuated between 9s. 4½d. and 9s. 5d., based partly on trade demand, as refiners both here and abroad sold more freely, and therefore showed more inclination to purchase, whilst factories did not offer more sugar, even at the higher prices, than could be absorbed by the trade and speculation. Otherwise there is no fresh news regarding crops and figures to stimulate the market. Notwithstanding the soft weather there is as yet no change in crop estimates of convention countries, whilst the Russian estimate has been raised by 60,000 tons to about 1,450,000 tons, and it is said that Austria begins to find Russian sugars competing in the Levant. The firm tendency in America, with a further reduction in the Louisiana estimate to 230,000 tons against 330,000 tons last year, attracts

some notice, even though the United States beet crop is stated to be 60,000 tons more and Porto Rico as likely to produce 40,000 tons more, which latter appears very doubtful in view of recent reports of unfavourable weather. The market in the United States has been firm at previous quotations.

Answers to Correspondents.

J. W. BURGESS.—We do not see that the benefit to be derived from the exchange is worth the additional amount you are asked to pay. You should keep what you have.

M. H.—(1) The debentures should be a fairly safe investment, and the shares, although speculative, might be worth picking up to put away. (2) This company's business is by no means what it was some years ago, and still seems to be on the down grade. (3) Looking to the past history of this concern we should not invest even in the debentures.

E. J. T.—If you can see your way to take a profit sell at once. We see no grounds for a further rise in the share on ordinary merits.

A. B.—(1) Company does a huge business and shares should be safe enough. The other company of a somewhat similar name is a small affair not worth touching. (2) These also might be worth buying to a small extent. (3) Better leave these alone. The company has made a big splash, but it seems to be on the "hit or miss" principle, and the shares are consequently a pure speculation. Of course you understand that dividends on commercial ventures are bound to fluctuate more or less, but as a permanent holding the first two should be all right.

GEM.—The company has apparently gone ahead a little too fast, and has recently raised more capital. Still it has a big business, and the shares at present price look a fair speculation.

SANDAGAR.—A comparatively small undertaking, but well managed and fairly prosperous.

HEABRIDGE.—Yes, you have so far been unfortunate, but you could hardly expect us to foresee a falling off in the value of the ore in the mines Nos. 1 and 2, and the failure to pay dividends on No. 3, all of which happened a considerable time after we drew up the list. We cannot advise you to buy more of any of these four shares, nor can we counsel you to sell at the present juncture. All are long holdings, and you need not despair yet, and on the average in the long run you may not do so badly as you seem to think. If you buy more at their existing low prices you must do it on your own responsibility.

POPPY.—(1) It is not a desirable purchase. We make allusion to it in our Mining Notes and News column. (2) It depends on the class of business. For good investment securities or for speculative things paid for and taken off the market the present is a good time, as it would be a mistake to wait until easy money has its effect on prices.

C. W.—(1) They are a very speculative share, with fair prospects and no more. If you bought it would have to be a very long lock-up.

W. K.—We should be inclined to keep them. See what we say amongst "Passing Events."

REEKIE.—(1) The security for these bonds seems ample, and in the face of it they are reasonably cheap, but drawings for redemption commence this year, and repayment would involve a small loss of capital. (2) Not in the first rank, but good enough. (3) We believe this line has pretty good prospects, and the debentures should form a moderately good investment. (4) This is a very good security reasonably priced. (5) Somewhat speculative because the line is not yet finished, but the outlook seems promising. (6) For merits we should place the securities as follows:—4, 2, 1, 3, 5.

F. E. D.—(1) Prospects in the country generally are so much improved that there seems a fair chance in this stock at the price named. (2) Rather high-priced now perhaps, but we do dot look for any particular reaction. Buy sparingly. (2) This concern has proved a great disappointment, and even at the low figure named the prospect is not very enticing. The amount standing to your credit on deposit is as you state.

The *Daily Chronicle* Christmas Number would be good value for the penny it costs even if it contained nothing more than Mr. W. Pett Ridge's clever and amusing story, "Mrs. Ballard's First," but it gives us also fiction of a varied description—a thrilling tale of an apparently devil-possessed ship (by Mr. Joseph Conrad) and a rather sentimental story "Miranda and the Mistletoe" by George R. Sims, while "Star One," by Alfred Tresidder Sheppard, is very realistic and full of pathos. Poetical contributions are not awanting, the principal achievement in that direction being "The Lutanist," by John Davidson.

The *Book Monthly* for December has amongst other interesting articles an illustrated one upon publishers' marks. It must have caused a good deal of time and trouble to get the various examples of these together, and the article has in consequence no small historical value. There is also an interesting interview on the subject of "the boy's story," which Mr. Milne has had with that veteran writer, George Manville Fenn. As might be expected, Mr. Fenn has a high conception of his mission. The other illustrated portion of the magazine is also most attractive, and we learn from it that a daughter of the late Sir M. E. Grant Duff has just published her first novel. The *Times* "Book War" and the caricatures that it has called into being also furnish material for an interesting paper, and the lists of "Books of the Month" and "Books Nearly Ready" are as indispensable as usual.

PUBLIC INCOME AND EXPENDITURE

The following are the receipts into and issues out of the Exchequer between April 1, 1906, and December 1, 1906 —

REVENUE AND OTHER RECEIPTS

—	Estimate for the year 1906-1907.	Total Receipts into the Exchequer from April 1, 1906, to Dec. 1, 1906	Total Receipts into the Exchequer from April 1, 1905, to Dec. 2, 1905

Treasury, December 4 1906.

The *World's Work* for December is the first number under the new editorship, and a very good number it is, one we should have liked to deal with in detail had space permitted, which it does not.

RAILWAY TRAFFIC RETURNS.

Foreign.

Alberta Railway and Irrigation.—Earnings for week ended November 30, $5,188, decrease $940.

Argentine North Eastern.—Traffic receipts for week ended November 2, £1,616, increase £219; aggregate from January 1, £75,771, increase £6,897.

Assam Bengal.—Traffic receipts for week ended November 3, Rs. 97,534, increase Rs. 14,435; aggregate from July 1, Rs. 16,25,322, increase Rs. 3,34,478.

Canadian Northern Railway.—Traffic receipts for week ending November 30, $230,800, increase $43,900; total from July 1, $3,380,700, increase $1,125,300.

Lucknow Bareilly Railway.—Traffic receipts for week ended November 3, Rs. 27,537, increase Rs. 705.

Quebec Central Railway.—Traffic receipts for the 4th week of November, $19,590, decrease $595; aggregate from January 1, $843,256, increase $106,826.

Rohilkund and Kumaon Railway.—Traffic receipts for week ended November 3, Rs. 20,697, increase Rs. 6,665.

White Pass and Yukon Railway.—Traffic receipts for the week ended November 7 amounted to $4,600.

English.

Cleator and Workington Junction.—Receipts for week ending December 1, £1,401, increase £131; aggregate from July 1, £27,268, increase £688.

Cockermouth and Keswick Railway.—Receipts for week ending December 1, £619, decrease £186; aggregate from July 1, £20,697, increase £407.

East London Railway.—Traffic receipts for September, £4,002, decrease £374.

East and West Yorkshire Union Railways.—Traffic receipts for the week ending December 1, £412, decrease £43; aggregate from July 1, £7,865, increase £224.

TRAMWAY AND OMNIBUS RECEIPTS.

Home.

Bath Electric.—Traffic receipts for week ending November 28, £685, increase £91; aggregate from January 1, £39,695, increase £6,864.

Blessington and Poulaphouca.—Traffic receipts for week ending November 28, £9, increase £2; aggregate from July 1, £545, increase £44.

Bristol Tramways and Carriage.—Traffic receipts for week ending November 30, £4,765, increase £402; aggregate from July 1, £115,871, increase £5,334.

British Electric Traction.—Receipts of all the Associated Companies for the week ending November 30, £26,379, decrease £562; total increase from January 1, £120,453; 433½ miles, against 440¾.

Burnley Corporation. — Traffic receipts for week ending December 1, £1,181, increase £123; aggregate from July 1, £26,899, increase £2,259.

Dublin and Blessington.—Traffic receipts for week ending November 28, £102, increase £7; aggregate from July 1, £3,421, increase £210.

Dublin and Lucan.—Traffic receipts for week ending November 30, £100, increase £12; aggregate from July 1, £2,797, decrease £1.

Dublin United.—Traffic receipts for week ending November 30, £4,771, increase £216; aggregate from July 1, £117,692, increase £6,280.

Edinburgh and District.—Traffic receipts for week ending December 1, £4,599, increase £195; aggregate from January 1, 1906, £237,865, increase £5,397.

Hastings and District. — Traffic receipts for week ending November 29, £586.

Isle of Thanet.—Traffic receipts for week ending December 1, £225, increase £9; aggregate from October 1, £2,875, increase £265.

London County Council.—Traffic receipts for week ending November 24, £25,616, increase £12,475; aggregate from April 1, £895,624, increase £388,317. Miles 112½, against 51.

London General Omnibus.—Traffic receipts for week ending December 1, £20,884, increase £453; aggregate from July 1, £503,990, decrease £5,230.

London Motor Omnibus (Vanguard).—Traffic receipts for week ending December 1, £4,508, increase £3,018.

London Road Car.—Traffic receipts for week ending December 1, £7,428, increase £410; aggregate from July 1, £173,981, increase £3,886.

London United.—Traffic receipts for week ending November 30, £5,267, increase £915; aggregate from January 1, £298,007, increase £25,785.

Rossendale Valley.—Traffic receipts for week ending November 30, £207, increase £18.

Yorkshire (West Riding) Electric.—Traffic receipts for week ending December 2, £1,058, increase £378; aggregate from January 1, £41,267.

Foreign.

Anglo-Argentine.—Traffic receipts for week ending December 2, £17,307, increase £1,988; aggregate from January 1, £730,695; increase £85,527.

Brazilian Street.—Traffic receipts for the month of January, Rs. 43,391, increase Rs. 303. Total receipts from August 1, 1903, Rs. 2,47,609, increase Rs. 3,737.

Brisbane.—Traffic receipts for month of October, 1906, £11,721, increase £1,371.

British Columbia Electric.—Nett earnings for Oct. $55,159, increase $13,169. Nett earnings, including income from investments, from July 1 to October 31, $224,997, increase $40,699.

Buenos Ayres and Belgrano.—Traffic receipts for the week ending December 2, £3,981, increase £411; aggregate from January 1, £175,403, increase £9451.

Buenos Ayres Electric. — Traffic receipts for week ending November 3, £2,017, increase £338; aggregate from January 1, £60,712, increase £9,035.

Buenos Ayres Grand National and New Tramways.—Traffic receipts for month of November, £28,810.

Calcutta. — Traffic receipts for week ending December 1, Rs. 49,741, increase Rs. 3,926; aggregate from July 1, Rs. 10,01,576, increase Rs. 56,408.

Cape Electric.—Traffic receipts for month of October, Cape Town, £11,276; Port Elizabeth, £3,199.

Cartagena (Colombia).—Traffic receipts for September, £10,646.

Carthagena and Herrerias.—Traffic receipts for the month of November, £5,248, increase £2,618. Total from January 1, £47,021, increase £15,943.

Kalgoorlie Electric.—Traffic receipts for August, £5,005; aggregate from January 1, £34,892.

Lisbon Electric.—Traffic receipts for October (Milreis 121,729.

Lombardy Road.—Traffic receipts for the month of July, 1,356, increase £16; aggregate from January 1, £8,795, increase £144.

Madras Electric.—Traffic receipts for fortnight ended October 31, Rs. 14,961, increase Rs. 2,096; aggregate from January 1, Rs. 2,86,564, increase Rs. 33,852.

Twin City Rapid.—Traffic receipts for the month of July, $522,949, increase $87,845; aggregate from January 1, $3,077,558, increase $470,984. Nett traffic receipts, $286,832, increase $38,781; aggregate from January 1, $1,627,058, increase $247,064.

§ From July 1.

The following cable has been received from the company's managing director in Ceylon:—"Health of oysters good. Estimated value of 10,000,000 oysters, 80 rupees per 1,000; of 11,000,000, 28 rupees per 1,000; of 2,000,000, 20 rupees per 1,000; and of 8,000,000 oysters 10 rupees per 1,000. There seems every prospect of a good fishery in 1908. New spatfall on the South Moderagam Bank." Office note: The above figures account for the 31,000,000 oysters already reported as in sight on the banks. The company's share thereof is two-thirds of the whole number.

The Investors' Review.

The Week's Money Market.

Bank Rate 6 per cent. (Advanced from 5 per cent. on Friday, October 19.)

Norfolk House, Friday Evening.

At the beginning of the week some people were still happy in the anticipation of a reduction in the Bank rate. Their view was inspired by cheap short loans. Thanks to Treasury disbursements, together with the release of bankers' balances after the November balance-sheet show had been prepared by them, floating credits in the open market became abundant at 4 per cent. or thereby. Bankers had difficulty in keeping the seven-day rate much above 4 per cent., and had to accept 4¼ per cent. in the early part of the week. Yesterday about £1,000,000 was estimated to be paid back to the Bank by the market, and still short money was 3½ to 4 per cent. on call and 4¼ to 4½ per cent. on seven-day loan. By next week, though, we quite expect to find the market hard up again, for it has no surplus means of its own, dependent as it is on Treasury disbursements and on what the Japanese Government agents may do with the money thus released by the payment of Treasury Bills or by ordinary departmental obligations. As yet, however, the ease of call money has not abated. The holders of credit seem to prefer to lend it cheap from day to day pending developments, and this morning's rates are, for call money 3½ to 4 per cent., and for seven-day money 4¼ and now and then 4½ per cent. The India Council has been lending and renewing at 4½ per cent. to the 31st inst. quite liberally.

As always happens, discount was disposed to flag when money became cheap, and more than once three months' remitted bills were discounted at 5⅜ per cent. At the beginning of the week there was talk of a finer rate than this, but we have again had a succession of small frights about gold exports, and 250,000 sovereigns actually did leave for Egypt on Tuesday. The New York market also frightens the City. Day money has been up to 35 per cent. on Wall Street, and when a market gets into a corner such as that figure represents we feel that anything might happen, especially at this time of year. With the rise in money rates the New York exchange on London has gone down until as we write it is quite within the bounds of probability that New York will compete with the Bank of England for the £450,000 or so of raw gold to be in the market on Monday. It is obvious that if the Bank rate had been lowered as some people confidently expected, we should have had gold again flowing out in various directions. Egypt may want more, although this week's further order has been cancelled. Some gold, however, will go to the Argentine Republic and further amounts are reported to be going to Brazil. Then money has become very dear in India, and although the direct influence of rates in the Peninsula upon rates here may not be great, indirectly India can affect us by attracting gold to itself from Australia, from the Far East, from wherever it can be obtained.

Considerations like these made discount houses struggle to keep the market up, and although they seldom got the working figure for three months' remitted bills above 5 7/16 per cent., they yesterday quoted 5½ per cent. as a practicable rate, and to-day aspired to 5⅝, with a hope of 5¾ next week. Long-dated bill rates are also better maintained than seemed probable at the beginning of the week. It was less easy to find buyers of such under 4½ per cent., and we may call the working rate 4⅝ per cent. The working rates, however, for shorter usances were distinctly below those above given, and to embrace the market range we must give three months' at 5⅜-⅝; four months' 5¼-½; and six months', 4 9/16-⅝ per cent. Two American mails were dealt with to-day, but released rather than absorbed credit having brought few bills.

Another influence which told against the view that money is going to be cheap again soon was the Bank return. It was a poor one in several respects. First of all the reserve fell off £672,000, in spite of the influx of £344,000 nett in gold during the Bank week. This was only an end-of-the-month movement of currency, but, unfortunately, little of that money can now be expected back. On the contrary, internal withdrawals must continue with very little intermission from now to the end of the year, bringing the reserve down by the 31st inst. by probably several millions. Then the increase of £765,000 in the other deposits was really no great consolation to the market, because the additional money probably belongs to the Japanese Government. It is understood to have held the £2,000,000 of Treasury bills paid off last Monday, and undoubtedly owned the bulk of them. The market, however, must have obtained some of the money paid out by the Government, because it redeemed £775,000 due on other securities—unless, indeed, that indicates the extent to which the Bank of England took up the released Japanese money in order to prevent outside rates from going to pieces. The public deposits fell off £2,178,000, which represents little more than the aforesaid Treasury bill reduction. As a whole, however, the return does not contribute to the comfort of the market, or tend to strengthen the view that we shall have a 5 or 5½ per cent. rate this year.

Most contradictory stories are current about gold shipments. We say above that the Egyptian order has been cancelled, but hear later that another £500,000 is to go, though, perhaps, not this week, the Bank of France being unwilling to part with more of the metal. The French cheque, however, is firm, and if discount here is maintained, it is just possible that the Bank of France may be obliged to let more gold go. How much more is going to the Argentine than the 20,000 sovereigns out to-day we cannot say, but one thing is undoubted, if our discount market weakens our little stock of gold will melt away in all directions; therefore the end of the 6 per cent. rate is decidedly not visible on the horizon.

Calls due next week are mercifully small, aggregating only £593,000 all told. This, however, includes £246,000 on Tilbury new debenture stock, due on Tuesday, and £200,000 on Buenos Ayres and Pacific ordinary shares, due on Saturday, the 15th inst. On Wednesday £100,000 becomes payable upon Southern Alberta Land shares.

SILVER.

The market for bars has not been in the same mood two days running, and prices have moved up and down in a very erratic fashion. A slight improvement on Saturday, owing to the issue of a French tender for 20,000 kilos, was followed by heavy "bear" selling, and a drop of ½d. per oz. to 31⅛d. for cash and 31 1/16d. for future shipment. A recovery the next day to 31 15/16d. and 32d. respectively gave way in turn to a fresh fall as the "bears" once more got the upper hand. To-day, however, it was reported that the United States Government had bought 200,000 ozs., and the market hardened to 31 13/16d. and 31 15/16d. per oz. Dear money in India caused exceptionally heavy applications to be sent in for the Rs. 1,20,00,000 of Council drafts on Wednesday, when the tenders amounted to Rs. 7,75,00,000, of which Rs. 5,31,50,000 were for telegraphic transfers. The Council was evidently not prepared to make large sales of transfers as it allotted Rs. 49,99,000 in these against Rs. 70,01,000 in bills. Tenders for bills at 1s. 4 3-32d. per rupee received 56 per cent., and for transfers at 1s. 4⅛d. 9 per cent. Next week another Rs. 1,20,00,000 will be offered.

Stock Market Notes and Comments.

We regard the whole position of Canadian speculative business in shares as peculiarly disquieting at the present moment. Not only have Hudson's Bay shares and the shares of the Canadian Pacific Railway, as well as to a smaller extent the lower stocks of the Grand Trunk Company, been driven up, but all sorts of land and mining adventures have been capitalised at excess figures and the prices of shares manufactured to represent these ambitious capitals forced up upon Canadian and United States markets—sometimes here likewise—and the settlement of population on the new lands of the North-West has been stimulated to an extent which must produce enormous suffering and much loss both of money and life in the near future. The whole thing has been lamentably overdone, and we earnestly advise all who may have been disposed to join in the merry-looking game of driving Canadian Pacific shares up to 200 and Hudson's Bays as high to keep away from the market. Those who have profits should take them. Never mind though prices may be sent up higher than they now are. Take warning by the sharp declines which frequently take place in Bays, and clear out. You may be perfectly certain that some fine morning we shall find the market demoralised and broken to pieces, for there is not a sufficiently broad and well-laid foundation for all this discounting of a future of infinite wealth—splendid land sales, unimaginably magnificent crops, a flourishing "new nation" of settlers all living happy and contented amid the winter ice and snow. The "prosperity" of the emigration agent is generally as evanescent as the "profit" of a Yankee or Canadian life office. Stand clear!

Markets, as will be seen elsewhere, have been very dull this week, quiet because Christmas is coming, and business has dried up in many directions, but there does not appear to be much stock about in the old-fashioned categories of the Stock Exchange; and could we shake off the incubus of that miserable Kaffir Circus, together with the apprehensions excited by outbursts of unbridled speculation, now in one corner of the market, now in another, we might hope to see the present torpor give place to renewed activity when money became cheaper. As it is, the wise man will still look out for trouble as a consequence of a 6 per cent. Bank rate. That must be stripping many a firm and many an institution of their last resources. We, indeed, regard the spasmodic and concentrated gambles which break out now here, now there, as one of the gravest symptoms of the time so far as sound credit is concerned. Most of these outbursts are the emanations of a market that wants to be cleared and cleaned.

The Week's Stock Markets.

Stock markets have possessed no particular character this week, dealings in leading departments again being on a rather small scale. We are not likely to see much revival in speculative business now until after Christmas, especially as there is small probability of the Bank rate coming down, and money for the remainder of the year will most certainly continue dear. Another fortnightly account begins in the mining departments on Monday, and although the short loan market is comparatively easy for the moment, it is not likely that bankers will make any concessions in their charge for loans, because the money market is bound to harden again before the final settlement for 1906 comes round. The American market was the chief centre of attraction during the week, and dealers waited on the messages of President Roosevelt and Mr. Secretary Shaw, in the hope that they would contain encouragement for another "bull" campaign. But a sharp spasm of tight money unfortunately coincided with the issue of these messages, and served to somewhat restrain the enthusiasm. Money in Wall Street has been in the neighbourhood of 30 per cent. during the last few

days, and despite measures of relief promised by Mr. Shaw will probably be higher still before many more days have passed. The Consol settlement was comfortably concluded on Monday, the quarterly dividend payable next January coming off on the same day. When this happens prices are usually supposed to look cheap, but the market for gilt-edged securities has not been particularly strong, and the quotation for Consols finishes practically where it opened. Other British funds fluctuated within their narrow limits, but Bank of England stock continues firm, and shows a further rise of 2¼. Nothing of consequence happened in the market for Home County and Corporation stocks, but the Colonial group was still good, with particular strength in Cape 3 per cent.

Paris was not disposed to play very energetically in European securities, a rise in money rates on the Bourse at the monthly settlement causing slight realising of some of the leading favourites. The Foreign Bond market consequently opened rather dull, with a slight set-back in such things as Japanese, Russians, Spanish, and Turkish. Brazilian issues were also a little slack, but Chinese continued to meet with investment support, and several of the Chilian loans were likewise marked up. Peruvians were sustained pretty well by the annual report, which comforted some dealers after their dividend disappointment, but the price did not close quite at the top. Argentine issues were very neglected throughout, and showed only trifling changes, and Cedulas hung round 24s. until near the end, when they relapsed. In the Central American group of securities, Honduras were slightly firmer, but Guatemala were marked down ½.

Dealings in the Home Railway market have not been of a lively character, but a steady business has gone on and indications are not wanting of a revival of the inquiry by investors. The satisfactory traffic receipts of the heavy lines for the past few weeks were repeated in the latest returns, and the increases to date have given rise to favourable forecasts of the dividends for the half-year now drawing to a close. A fair amount of stock has consequently been taken off the market during the current account, and Great Western ordinary and new stocks, North-Western, and North-Eastern all show big improvements. Business, however, although chiefly in these investment stocks, has not been altogether confined to them, and the securities of the Southern lines have also received a fair amount of attention with corresponding gains in prices, and Great Eastern, Great Northern, Lancashire and Yorkshire, and Metropolitan likewise show advances of a modest description.

Forecasts of President Roosevelt's message to Congress seemed to indicate that after all he had not "taken off the gloves" to deal with the trusts, and the mere hint that this was the case was sufficient to outweigh all monetary conditions with Wall Street. It did not matter that the rate for call loans went up to 12 per cent. New York was in a bullish mood, and sent prices sailing upwards with the usual firework display. They hesitated for a time just before the message was delivered, but the message itself was quietly received, and the advance was speedily resumed with Erie as first favourite and New York Central a good second, the latter being in demand on reports, confirmed later, that the dividend was to be increased to a 6 per cent. basis. Money shot up to 30 and 32 per cent, without causing much of a set-back, as the Standard Oil group's bank came to the rescue with funds at 6 per cent., and it was freely asserted that Mr. Shaw was once more coming to the help of the market. Advices from Washington at first denied that any assistance would be given except in the case of absolute panic, but apparently the secretary was brought to see reason, as it was afterwards stated that he would release about £2,500,000 by anticipating on the 15th of this month interest payments due in January. All therefore seemed to be going smoothly for the "bulls," when their plans were upset by cables from this side with rumours of large gold withdrawals for Egypt, Argentina, and other places, and prices promptly gave way all round, but the principal sufferer was Missouri. Atchison were inclined to be dull on the announcement that a meeting of stockholders had been called for January 30 to ratify an issue of £5,000,000 common or convertible bonds for the purchase of rolling stock and the construction of a line from Mexico and New Mexico to Texas and Pacific coast points.

Fantastic calculations as to the real value of Canadian Pacific shares have been made and repeated with such frequency that speculators' minds have become inflamed, and a very wild gamble has gone on all the week. It was asserted that the investment demand had been so great as to leave the market bare of stock, but the real investor has not had much to do with the advance in price. Grand Trunk stocks went up at first in sympathy, but the disappointment over the traffic return, which showed an increase of only £12,600 against an expected £20,000 to £25,000, and the nett gain on the week was comparatively trifling. Amongst other Canadian things, White Pass and Yukon first and second debentures were both £1 harder. Beira income debentures continued to improve, and Mashonaland and Rhodesia debentures were again lower.

In the Foreign Railway market Argentine things were seldom mentioned, but prices on the whole were steady. East Argentine were exceptionally active, and scored a further big advance. Cordoba Central second preference was also decidedly better, and Buenos Ayres Great Southern preference put on £1 or so, but other movements in this group were mostly adverse. Mexican Railway stocks continue to receive strong support, both the ordinary and second preference finishing substantially higher, and Interoceanic "B" debentures and Mexican Southern ordinary improved sympathetically. Selling predominated in United Railways of Havana ordinary stock, knocking the price down 3, but other Cuban issues were inclined to harden. Paraguay Central debentures were better on the report, but Guayaquil and Quito second bonds relapsed, and Colombian stocks all gave way.

The distinct revival in the Brewery market was the leading incident in the Miscellaneous Markets, and another all-round rise took place in quotations. Allsopps, Watney, Combe, and City of London issues were prominent in the advance, but towards the end of the week there was some realising by speculators already anxious to secure their profits. There was less activity among Motor and Cycle shares, and most of the recent favourites, such as Darracqs, Daimlers, Humbers, Enfield Autocars, Argylls, and Dunlops, all displayed a reactionary tendency. Nitrate shares continued to go back on the further decline in the market price of the fertiliser, but the Iron and Steel group of securities was strong, with small rises in a number of leading shares. The textile list was likewise well sustained, while among Catering issues, Slaters were rather better. Spiers and Pond ordinary and preference shares were again moderately dealt in, but the recent rise in price was not quite maintained. Van den Berghs went back rather sharply late in the week, but among meat shares Nelsons, which seemed to be in short supply, had a rather sharp rise. Eastmans, however, were dull, and dropped to under 9. Welsbach Lights put on a few pence on dividend anticipations, and the share issues of the Linotype Company were inquired for in a small way. Hotel shares generally were rather lower, and there was some selling of Telegraph Construction and Maintenance shares, which dropped about 30s. in the week. Hudson's Bays rallied at one time to 119½, but the recovery prompted another heavy stream of realisation, and the price is now in the neighbourhood of 110½, after being lower. Pekin Syndicate and allied shares were tolerably steady, but the Argentine land group was not quite so prominent. A quick run up in Anglo "A" to 27¾ was followed by a reaction to 27¼, and Telegraph shares generally were decidedly weaker.

Stock markets were idle and heavy at the close in all departments. It is merely the shadow of the coming settlement which begins on Tuesday for the general account and on Monday for mines, but both the Yankee and Canadian markets were weak, as well as ours, and Paris is quite inert. Nothing worth talking about happened anywhere.

Too late for this week's issue we have received the Board of Trade figures for November. But we give the main figures now:—Imports for the month £55,749,000, an increase of £2,602,000 or nearly 4.9 per cent.; exports of British and Irish produce £32,975,000, being £3,367,000 or almost 11.4 per cent. more; and exports of foreign and colonial merchandise £6,616,000, being £659,000 or just over 10 per cent. more than in the corresponding month. Therefore the eleven months for which we now have the figures give us increases of £41,206,000 in imports; £42,892,000 in exports of domestic produce and £6,712,000 in exports of foreign and colonial produce compared with the same months of last year, and most of the increase in exports is due to manufactures. No wonder poor, dear Mr. Joseph Chamberlain "looks forward with ever-increasing confidence to the future."

THE WEEK'S PRICE MOVEMENTS.

BRITISH FUNDS, &c.—Rise: Bank of England 10, to 285-290.

SHIPPING.—Rise: Anchor Deb. 1⅛, to 100-103, General Steam Pref. ⅛, to 8⅞-9⅛, Imperial Direct Deb 1⅛, to 90-93, Kleinwort Pref. ⅛, to 4⅜-5, P. and O. Def 1, to 227-230, Shaw Savill "A" ⅛, to 4⅞-5⅛. **Fall:** Cunard (£20 pd.) ⅛, to 15-15½

TEA AND COFFEE.—Rise: Amalgamated ⅛, to 2⅛-2⅜, Assam 1, to 34-36, Bengal United ⅛, to 8⅛-9, British Ind an ⅛, to 2⅛-3, Cachar and Dooars ⅛, to 4⅛-5⅜, Consolidated 1, to 2⅛-2⅜, do. 1st. Pref ⅛, to 8⅛-9⅛, do 2nd Pref. ⅛, to 8⅛-9⅛, do Deb. 1, to 93-95, Darjeeling Cons ⅛, to 8-8⅛, Doom Dooma ⅛, to 16⅞-17⅛ Eastern Assam 1, to 6-7, Jokai (Assam) ⅛, to 11⅛-12, Jorehaut 1⅛, to 37-39, Luegla ⅛, to 6-7, Nedeem ⅛, to 7⅛-8⅛, Ouvah ⅛, to 9⅛-10⅛, Singlo ⅛, to 2⅛-3⅛, do. Pref. ⅛, to 4⅛-5⅛.

TELEGRAPHS, &c.—Rise: Anglo-American ⅛, to 90⅛-98⅛, do. Pref. ⅛, to 100⅛-110⅛, do Deb 1⅛, to 27⅛-27⅞, Anglo-Portuguese ⅛, to 102-104, Direct Spanish Pref. ⅛, to 9-9⅛, do Deb ⅛, to 100-103, Direct West India ⅛, to 101-103. **Fall:** Eastern 2⅛, to 133⅛-134⅞, Gt. Northern ⅛, to 35⅛-37⅛, Marconi's Issues 1/16, to ⅛-1, Monte Video 1/16, to 1-1⅛, Natl Telephone 1st Pref. ⅛, to 10⅜-10⅝, do 2nd Pref. ⅛, to 10-12, do. 3⅛ pc Deb. ⅛, to 97-99, West India and Panama ⅛, to ⅞-1⅛, do. 1st Pref. ⅛, to 7⅛-7⅞, Western ⅛, to 133⅛-134⅛.

TRAMWAYS AND OMNIBUS.—Rise: British Columbia Elect. 2, to 127-132, British Electric Traction Pref. ⅛, to 8⅛-8⅞, do 5 p.c Deb. 2, to 107-110, London Motor ⅛, to 1⅛-1⅜, Road Car ⅛, to 3⅛-3⅝, South Metropolitan Pref. ⅛, to ⅞-1, Sunderland Deb. ⅛, to 90-94. **Fall:** Calcutta ⅛, to 7⅛-8⅛, do (New) ⅛, to 7⅞-8⅛, City of Buenos Ayres 1/16, to 5⅛-5⅜, Potteries Electric Traction ⅛, to 6-7, Yorkshire ⅛, to 1⅛-1⅜.

WATERWORKS.—Fall: Tarapaca ⅛, to 10⅜-11.

MINING NEWS AND NOTES.

**** Frank and unbiassed answers are given to all questions relating to Mines. Address Editor Mining Section and enclose* One Shilling *for each question asked. No bucket shop circular or advertisement should ever be responded to without first consulting the* Investors' Review.

We need waste little space this week in describing the desolation of the Kaffir Circus. This market is now practically deserted, both by the professional gambler and the amateur speculator, and genuine bargains between buyer and seller are so rare as scarcely to disturb its placid stillness. Dealers are still leaving it for more active looking spots, for the Siberian or Diamond market close by. So prices, with no buyers about, have been drooping daily, just a little at a time, but the loss is heavy when the week's aggregate is counted up. Rhodesians have been following in the wake of Kaffirs, going downwards, and not even the model of the Victoria Falls at the Chartered Museum can rally things. The public do not care a rap for the scheme, for, by the time it gets into working operation many young men may be patriarchs and dozens of Rand mines be mere memories to a new generation.

Diamond shares have relapsed, on the whole; even De Beers, despite the report and the promise of the chairman to give an increased dividend. Gamblers, after the recent rise, have evidently been taking their profits here and in Jagersfontein, for both shares have fallen simultaneously. Another attack has been made upon Premier deferred, and they have dropped heavily, while Vaal Rivers have been as volatile as ever.

West Australians are weak, with Oroya-Brownhills still the most prominent. We discuss the situation in these amongst "Passing Events." It is a most perplexing one, and calls for a statement from the directors. Doubtless some real selling must be proceeding, but it is questionable if this alone explains the steady decline. Kalgurlis have also fallen since the publication of the report, which must be judged a very fine one, indeed, not only in its record for the past 12 months, but in its future promise. Other shares have been giving way to a less extent than these two.

In the Jungle Ashanti Goldfields suddenly rushed upwards on Wednesday for no particular reason; but they quickly went back on profit-taking. The section on the whole is dull and cheerless.

After going up in the beginning of the week copper shares have fallen back at the end, mainly in tune with the untoward trend of things in Wall Street, where the banks are showing a wise disposition not to assist speculation in copper and other mining shares. In the light of the rise in the price of the metal all kinds of shares from all parts of the world are being steadily introduced on the market here, without prospectus or information of any kind. The names of these find their way surreptitiously in the market reports of a certain prominent financial daily newspaper, where we find this week mention of a share called the Union Consolidated, but can find no trace of it in any reference book.

There is much less excitement amongst Siberians, probably because the public show no desire to assist the effort of gamblers to generate a boom here. Loddon Valleys are likewise more subdued and Deep Leads shares have not been the "draw" some people hoped they would be.

Elsewhere Esperanzas have been erratic, as usual, but other Mexican shares have been firmish. Camp Birds have been bought and Tomboys are better on an increased dividend of 2s. 6d. per share against 2s. declared in May last. Amongst Indians Champion Reefs have been favourably affected by the directorial report, which has steadied other Indians. Waihis, in the New Zealand group, are slowly recovering.

Simmer and Jack East.—The directors complain that operations in the past financial year to July 31 were handicapped by the shortage of labour, whilst working costs were adversely affected by the arrival of new batches of inexperienced coolies. In order to supply the large tonnage to keep the mill running it was necessary to put through about 13 per cent. of low-grade rock from the surface dump, so shareholders must not expect too much. Crushing was started for the first time in the company's career in July, 1905, so this is the first report showing the results of gold winning. The average number of stamps employed was 110, and these crushed 212,392 tons for a total output of 66,684 fine ozs. of a value of £280,829. But working costs absorbed no less than £269,155, so the profit on working was only £11,673, raised to £16,412 with income from other sources. This is carried forward. Reserves of milling ore are estimated at 803,809 tons of an average value of 8 dwts. per ton; in addition there are 672,000 tons of low-grade ore exposed. Meanwhile the directors have had to increase the capital appreciably. In September of last year they were authorised to borrow up to an aggregate of £900,000 and to raise the capital to a like figure. So in addition to the first debenture debt of £500,000 the directors have issued 5½ per cent. second debentures to the amount of £400,000, out of which they have repaid to the Consolidated Gold Fields of South Africa the £150,000 owing to it. This has improved the financial position, though at the expense of another and a heavier debt, but the money was much needed. In the early future the stamping capacity is to be increased to 250 heads, and the company will need all these additional stamps if it is to hope to pay decent dividends. But it must get rid of dear Chinese labour.

Knight's Deep.—During the twelve months ended July 31 the mill crushed 270,569 tons for a yield from all sources of 95,203 fine ozs. of a value of £401,422, and as costs came to £324,439 the working profit was £76,983, equal only to 5s. 8d. per ton. Sundry revenue added £35,663, raising the credit to £112,645. After allowing for the profits' tax for the previous year, as well as for the past, £109,728 is taken to the appropriation account, and with £44,989 brought in the free balance is £154,717. Two dividends were paid of 5 per cent. each, absorbing £64,352, debenture interest took £15,541, and £74,823 is carried forward. There was a falling off in the value of the ore crushed from 32s. 3d. per ton to 29s. 8d. On the other hand, the working costs were reduced from 27s. 9¾d. to nearly 23s. 11¾d., so the profit per ton was 1s. 3d. higher. The debenture debt has been reduced by the annual drawing of £22,900, reducing it to £234,700. Balance of expenditure due to the war—viz., £123,237—has been written off against premiums. Bills payable amount to £45,000 and £45,499 is owing on other accounts, but these are covered by the fingerable resources.

Lace Proprietary Mines.—In the first report of this new South African mining company, formed in 1904, we cannot reasonably expect wonders, especially as only boreholing operations are carried on. Up to September 30 the receipts for working capital were £28,130 and the expenditure was the same amount. With regard to the boring on the farm Droogefontein all the holes have proved that the coal measures, dolomites, and the Black reef series occur overlying the Witwatersrand beds, and in several of the holes coal seams of a fair quality were intersected. The thickness of the second strata proved to be greater than anticipated. According to the depth at which the main reef was struck in the various holes, the farm Droogefontein is not regarded as a deep level mining proposition, so that the future exploitation of the property should not be a serious matter from a financial point of view. Exploitation of the farm Vlakfontein has been suspended for a time. The difference of opinion held by the various experts consulted, as to the depth at which the Main Reef series would be struck, being so divergent, the directors considered that the interests of the company would be best served by a waiting policy. That is to say, they are awaiting the results of sinking operations now being carried out in properties adjacent to Vlakfontein in the hope that they may enable the board to decide upon a satisfactory working policy. A further reason for delay is assigned in the uncertainty as to how the Government will treat the owners of unproclaimed deep level ground. The results obtained on Droogefontein and other farms in the vicinity proved conclusively that the farms Strydpan and Stompiesfontein were not worth the purchase price, and the contract has been abandoned.

Transvaal Estates and Development Company.—It suffered severely from the depression in mining and farming in Johannesburg during the past 12 months, interest and dividends amounting only to £16,896, rentals to £5,202, commissions to £65, and transfer fees to £381. In order to meet the heavy depreciation in the company's investments the directors have reserved an additional £42,131, so the tiny credit of £844 is carried forward in contrast with £12,339 brought in. The holdings in British Government and other securities and interests were valued in the aggregate at the end of September at £327,726, Stock Exchange loans amounted to £51,574, money on deposit was £8,139, and cash at bankers £2,422, so the financial position is sound enough. But the existing depression must continue to tell upon it.

Delagoa Bay Development Corporation.—Notwithstanding that revenue from all sources in Lourenco Marques increased during the financial year to June 30, this company added to its losses. Income totalled £7,518, of which £3,048 comprised interest on loans and transfer fees, and £4,469 was profit in Lourenco Marques. London expenditure took £2,578, and debenture interest £10,798, and after writing off the balance of £3,425 on the East African Dredging venture, the nett loss was £9,283, increasing the debit to the now formidable aggregate of £27,950. Contango loans £19,068, cash £9,489, and debtors £8,125, will exceed the current liabilities, consisting of bills payable £3,000, creditors £3,962, and debenture interest accrued £5,132. The auditors point out that no provision has been made for depreciation nor for formation expenses and debenture discount expenditure. These important matters, including the debit, the directors intend to deal with during the current year, and hope to be in a position to communicate their proposals in the course of a few months.

Montrose Gold Mining and Exploration Company.—In the 12 months to June 30 the company made a profit of £9,746 on the sale of some shares, dividends and interest added £1,674, farm rents £182, and transfer fees £26. The directors include £21,195 "appreciation" of investments, and in this way show a total credit of £32,825. On the other side they allow £16,434 for depreciation not yet realised, and show a profit of £11,279—mostly unsubstantial. As a debit of £14,943 appeared in the previous balance-sheet, they reduce it by deducting from it this so-called profit, to £3,664. Cash is £10,730, debtors owe nearly £1,000, and "investments" appear at £41,714, valued by the directors, the auditors say. It is hardly possible to be hopeful of the company's prospects.

Central Nigel Deep.—As operations in the year to July 31 were confined to unprofitable caretaking and general maintenance the directors have little to say. The financial position is worse than it was twelve months ago, the balance of expenditure over income, including £8,037 for interest on loans and commission, amounting to £11,134, raising the debit to the considerable sum of £97,209. Cash is only £92.

Cape Copper Company.—Cape Coppers have been very strong of late, advancing in sympathy with the rise in the price of the metal, for there is less justification for it in the report to April

30. Notwithstanding a reduction in the output from the Ookiep mine, the profit was higher, due to the better price obtained for the copper. Returns from the Ookiep mine were 15,031 nett dry tons, a decrease of 4,216 tons, whilst the Nababeep mine gave 53,151 tons. So the gross profit rose from £263,563 to £343,384, and after paying income-tax, transferring £20,000 against £15,000 to the landed estates and buildings sinking fund, £5,000 to the reserve fund, and a similar sum to the Nababeep sinking fund, the dividend on the preference and ordinary shares is increased by 3s. to 17s., the highest distribution since 1899-90, when 18s. was paid. Still, even on this dividend the rise seems to have been too rapid, looking to the yield and other matters affecting the future. For a long time past the directors have been searching for another good property, but without success so far. In the previous report it was stated that an option had been secured on a property somewhere in America, but even this has been abandoned. Reserves of ore at Ookiep are estimated at 6,000 tons, showing practically no change; at Nababeep they have increased by 10,000 tons to 160,000 tons. Three other properties have been secured, it is said, under favourable options, and exploratory work is being tentatively pursued on each.

KALGURLI GOLD MINES.—A much greater quantity of ore—112,808 tons against 66,123 tons—was treated in the year ended July 31. Working costs were further reduced, namely, from 21s. 10d. per ton to 20s. 5d. Total gold recovered was 82,513 ozs., compared with 48,148 ozs., the average improving a trifle from 14.56 dwts. to 14.60 dwts. per ton. Gold sales realised £347,851, the total income was £349,080, and the profit £166,915 against £81,462, whilst £74,076 was brought in, making £240,990. Dividends paid aggregated 25s. 10d. per share against 10s. for the previous year, by far the company's highest payment. An interim dividend of 7s. 6d. per share was paid in October for the year 1906-7; and a second of 7s. 6d. with a bonus of 5s. per share will be paid on January 7, 1907.

CONSOLIDATED GOLD FIELDS OF NEW ZEALAND.—In consequence of the entirely satisfactory way in which the Blackwater mine has been opened up, the directors have exercised the option held by the two companies. A transfer of the property has been completed into the joint names of the Consolidated Gold Fields of New Zealand and the Progress Mines of New Zealand, and the purchase-money of £27,000, making in all £30,000, has been paid. Many shareholders have expressed a wish, say the directors, in the event of this property being formed into a company, that the shareholders in the Consolidated Gold Fields and Progress companies should have an opportunity of directly participating. The matter is now receiving the careful consideration of the directors, who hope to submit a scheme at an early date.

NORTH WHITE FEATHER GOLD MINES.—The position of this old Westralian company is slowly improving, but it does not promise to become a big dividend-payer. In the twelve months ended June 30 the gold won realised £48,477 and the entire income was £49,159. The nett profit amounted to £9,922 after allowing for all outgoings, including depreciation, and as £7,763 was brought in the disposable sum was £17,685. An interim dividend of 6d. per share was paid in November, 1905, but no final one is added and £7,689 is carried forward. Nearly the whole of the ore treated was drawn from one chute of ore, which yielded sufficient stuff to keep pace with the battery, but has not provided a sufficient margin to build up ore reserves. The total quantity treated was 20,355 tons, yielding 11,651 ozs. of bullion, whilst 17,664 tons were cyanided for 1,482 ozs. of bullion. Financially the company is well to do.

BURBANK'S MAIN LODE (1904).—Thrice has this company been reconstructed, the last time in 1902, since when it has continued to struggle without making much progress. Last year, however, it was more successful than usual, for it won gold to the tune of £21,013 and earned a nett profit of £4,862. In the previous balance-sheet there was to debit of £675, now the directors can exhibit a credit balance of £4,188. These profits, the directors say, they have been compelled to employ temporarily in the capital outlay for new machinery and the development of the mine. Notwithstanding this they look forward to being in a position of making some returns during the current year, as fairly good profits have been earned since June. Cash in hand is only £77 and some gold is worth £2,110, but these are much below the sum of £7,848 owing to creditors.

QUEENSLAND COPPER COMPANY.—Sales of the company's products in the year to June 30 fetched £134,325 after deducting the value of the mineral in transit on August 1, 1905. Stocks of ore and products had a value of £2,670 at the end of July and ground rents and tribute brought in £493, total £137,488. Gross working profit was £34,245, and transfer fees added £310. Depreciation took £2,475, Queensland income-tax £1,000, and directors' fees £2,187, leaving a nett profit of £28,893, and £2,441 was brought in. After the 6 per cent. preference shares get their dividend 6 per cent. is paid on the ordinary shares, £3,500 is written off the balance of preliminary expenses, £1,000 is utilised in reducing the plant account, and £14,026 is carried forward, subject to directors' additional remuneration. Liquid assets show an appreciable surplus over the trade liabilities. Prospects are tolerably promising.

NEW CRAVENS CALEDONIA GOLD MINING COMPANY.—During the half-year ending September 18 the tributors raised 308 tons for 339 ozs. of gold, worth £1,049, and as the residues realised £85 the total was £1,135, an average of £3 13s. 6½d. per ton. The financial statement shows a bank credit of £1,194 against £77 at the commencement of the term. In the half-year the No. 6 level of the Victoria Company was extended a little distance in the ground of the New Cravens Caledonia, and it is contended that the Victoria and Caledonia Block shaft, which is now in formation at a depth of 1,600 ft., should test the cross reef now being worked successfully in the New Queen, Marshall's Queen, and Queen Cross Reef mines. This reef should be met in the deepening of the company's shaft, so the results of the next few weeks' operations in the Victoria and Caledonia Block will supply valuable data. Should success be achieved there the directors will at an early date instal more powerful machinery and proceed with the deepening of the shaft. Outstanding calls amount to £242, so the directors say it would not be necessary to make heavy calls to provide the new machinery.

BLUE SPUR AND GABRIEL'S GULLY CONSOLIDATED.—The receipt of the directors' report gives us a reminder, not a very cheerful one, that this company is still in existence. The report covers two years, and is brought up to February 28. But the directors furnish a good excuse for this delay, in the illness of the chairman, Sir Walter Buller, F.R.S., K.C.M.G., who died in July last. During the first year covered by the report 203,135 cubic yards of cement were treated, producing 1,524 ozs. of gold of a value of £6,062, whilst for the twelve months ended February 28 last 222,329 cubic yards were dealt with for 1,721 ozs. of gold worth £6,836. For the two years the working charges at the mine came to £9,455, so a fair profit was earned on working the cement. Since the last general meeting, held on October 28, 1904, the following interim dividends have been paid on the preference shares:—March 10, 1905, 8 per cent., being the twelve months' dividend to November 30, 1904; and March 13, 1906, 8 per cent. for the year to November, 1905. The directors now recommend the balance of the dividend due on the preference shares to February 28 last, and regret that the returns from the mine will not allow of a dividend on the ordinary shares.

OFFIN RIVER GOLD ESTATES.—In issuing a copy of a letter received from Messrs. Burt and Kirkcaldy, the company's consulting engineers, the directors say it is a matter for congratulation that the exhaustive tests by boreholes made by Mr. Kirkcaldy, who spent several months on the property, have proved these to be undoubtedly payable, as has already been amply demonstrated by the dredges having operated there successfully and having produced over £28,000 worth of gold. These dredges, however, he reports to be unable to work to their greatest efficiency without certain structural alterations, but when these have been carried out he is confident that the earning power of No. 1 will be increased, and that of No. 2 certainly doubled. No. 2 dredge was built upon the statements made by the late manager soon after No. 1 started work. The directors have no doubt that the opinion then formed by him as to the depth of gravel was perfectly honest, but the results of the boreholes have proved it mistaken, it being proved that the depth of the general run of the ground to be treated is considerably less than the late manager reported, with the result that the dredge raises its buckets rather less than one-half full, besides causing unnecessary wear and tear on the machinery. The engineers believe that the company has not only a valuable dredging proposition, but that there exists every indication of payable reefs on the property. As the extent of the concessions under the company's control embraces over 100 square miles and 58 miles of rivers, the directors consider that further steps should at once be taken to develop these on a larger scale, and at the next general meeting, to be convened as early as possible in the new year, they hope to present a scheme which will enable the company to increase its fleet of dredges. This is probably a hint of an increase of capital.

ST. JOHN DEL REY MINING COMPANY.—In the first six months of the company's financial year the profits fell off considerably, and this the directors attribute to the insufficiency of labour, which was the effect of the high rate of exchange. It appears that a big demand for labour arose at Rio de Janeiro for large public works, so many of the best miners left the company's service, and up to the present time have not been replaced. Consequently the increased amount of electrical power now available cannot at present result in the larger output for which it was designed, although it is saving the heavy cost formerly incurred for steam power. The value of the bullion was £25,000 less than that for the corresponding half of 1905, but as economies were effected in some directions the nett profit was £15,955 against £28,491, a decrease of £12,536. As it will take some time to bring the labour force up to the strength necessary for a larger output, the directors are carrying forward the balance of the half-year's profit to be dealt with at the close of the financial year.

SAO BENTO GOLD ESTATES.—This Brazilian company, which is under the management of Messrs. John Taylor and Sons, was last reconstructed in January, 1905, and the directors now issue their report and accounts for one year and six months to June 30 last. During this period 14,019 gross tons, or 13,458 nett dry tons of ore were crushed and treated by the cyanide process for a production of 4,300 ozs. of fine gold. The mining and general expenditure in Brazil and England amounted to £36,405, against which some sales of gold realised £18,508, and sundry receipts gave £573, so there is a deficit in this first balance-sheet of £17,417. As depth was attained the character of the ore changed, and it now consists of a hard quartz, highly mineralised with arseno-pyrites and a small quantity of ordinary iron pyrites. In order to deal with this refractory ore expeditiously and economically it became necessary to make certain additions to and alterations in the reduction machinery, and milling was temporarily suspended. In July last, however, the whole of the machinery was in working order,

and on the 12th of that month the crushing of ore was resumed. The returns have shown a gradual and steady increase, and the directors are of opinion that further improvements may be anticipated. There is a debenture debt of £25,000, which falls to be redeemed on October 15, 1907, and it has been decided to extend the period for repayment until October 15, 1912. In view of the probability of additional capital being required, the directors have resolved at the same time to increase the amount of the authorised issue to £50,000.

New Zealand Crown Mines.—The accounts for the year ending August 31 show that after writing off £4,070 for depreciation of machinery, plant, and buildings, and £14,057, the whole of the expenditure on mine development, there is a nett loss of £2,694. Deducting this from the balance of £4,932 brought in, there is a surplus of £2,238 to carry forward. Operations were carried on below and above the Waitawhota tunnel level, and in the former portion of the mine a winze is being sunk with the object of exploring the property in depth. Work in the upper portion of the property above the Waitawhota tunnel level has consisted in rising upon the new reef, where ore of milling value has been encountered, the appearance of which is said to be of an encouraging character. The directors say they desire to point out that the ordinary operations of ore extraction and treatment have resulted in a profit of £11,363, the loss being due to the expenditure on development and exploration.

Witbank Colliery.—This South African colliery company did not do so well last year as in the preceding year, for the output of coal showed a decrease of 2,888 tons at 333,883 tons. The directors again lament their failure to obtain a share of the C.S.A.R. contract, and, as usual, the greater portion of the company's production was taken by the mines on the Rand. Accordingly, the profit was lower at £28,540, and sundry revenue gave £2,781, making a total of £31,321. But no allowance is made for depreciation, the directors excusing themselves from this by saying they maintain the plant in the fullest state of efficiency, and as cost of maintenance has been charged to revenue they claim that provision is made in another form. A dividend of 15 per cent. is paid and the considerable balance of £35,685 is carried forward. This is more than represented by the £48,250 in cash, in addition to which £25,004 is owing by debtors. As current liabilities are only £16,478 the financial position of the company is tolerably strong.

Dareheib and African Syndicate.—In issuing a report for the year ending June 30 the directors embody the report of Mr. Trelease on the work done during the time the expedition was on the property. The conclusions to which he has come after a careful examination of the Onib district are that four main reefs with such extensive workings are sufficient in themselves to warrant a considerable outlay in proving their value at a greater depth than it was possible for the last expedition to accomplish, and it is his opinion that lodes which yielded to the ancient workers such large quantities of mineral, and that have been proved to a certain extent to be continuous both laterally and in depth, call for the further investigation of their resources and this can only be done, he says, by vigorously taking up the work again by another expedition and completing the exploratory work. It is anticipated that during the current season a considerable amount of exploratory work will be accomplished, the result of which should enable the directors to come to a definite conclusion as to the prospective value of the property.

Indian and Colonial Goldfields.—Another miserable report is issued by the directors for the period ending October 31 last. Income was only £925 from dividends and transfer fees, and the total loss was £19,667, including £9,659 on sale of shares and £6,364 written off sundry shares. The aggregate debit in the balance-sheet is now £50,433, yet the directors say they do not advise winding up! Nor have they any intention of making a call on the shares! Dear! dear!

Kinta Tin Mines.—Production in the 12 months to June 30 amounted to 192 tons of tin ore, valued at £18,848, the gross income being £24,930 and the nett profit £15,743. Dividends aggregate 20 per cent. and £1,480 is carried forward. Notwithstanding the high rate of wages and the increased proportionate costs of mining stores, &c., the general manager reduced the working costs.

Company Reports and Balance Sheets.

**** *The Editors will be much obliged to Secretaries of Joint Stock Companies if they would kindly forward copies of Reports and Balance-sheets direct to the Office of the* Investors' Review, *Norfolk House, Norfolk Street, W.C., so as to insure prompt notice in these columns.*

Great Indian Peninsula Railway Company.

The report of this great system for the half-year ended June 30 last completes the sixth year under the contract of 1900, and the operations of the line for the past twelve months have been so satisfactory that a dividend can be paid of £1 4s. per cent. on the stock of the company in addition to the guaranteed interest. There was a very slight increase in the mileage operated during the half-year under review, but the gross receipts went up by Rs. 9,01,899 to a total of Rs. 3,58,96,382. The working expenses, however, were larger by Rs. 11,57,204 at Rs. 1,66,06,896, leaving the nett income at Rs. 1,92,89,485, a decline of Rs. 2,55,306. Since the goods traffic yielded a revenue smaller by Rs. 4,67,305 it follows that the improvement in receipts was entirely in the coaching traffic, which showed the important increase of Rs. 13,07,720. The ordinary passenger traffic went up by Rs. 10,85,320, the numbers carried rising by 1,113,154, besides which troops and police, season tickets, luggage and baggage, special trains, and miscellaneous all gave more or less important gains. The increase in passengers was mainly third class, as usual, and may be attributed to the great commercial activity in spite of famine conditions prevailing in Central and Northern India. The additional facilities offered to the public for travel was another contributory cause, and a certain portion of the increase was likewise due to the fact that the Agra-Delhi Chord line was in operation throughout the entire six months as against four months for the corresponding period. Although the actual decrease in goods traffic was Rs. 4,67,305 the drop under public merchandise was no less than Rs. 6,48,376, the principal items which adversely affected the general result being cotton, wheat, and linseed. All these commodities produced much smaller revenues than last year, but it is pointed out that the decrease under cotton of Rs. 9,13,418 compares with an abnormally large increase of Rs. 11,56,579 in the previous half-year, a considerable portion of the crop having been dispatched to Bombay earlier than usual, and being therefore included in that half-year's return. The falling off in wheat was partly due to a smaller yield in the Central Provinces, Central India, and the Bombay Presidency, and partly to the unfavourable conditions of export, while the decrease in linseed arose entirely from failure of the crops. On the other hand, there was an increase under gram, pulse, and the cheaper classes of food grains, owing to the movement of this traffic to famine districts. Manganese ore also improved considerably owing to the large demand for export, and an advance in the sugar traffic was the result of a strong demand for Mauritius sugar imported *viâ* Bombay. On the expenditure side the principal increase was in maintenance of way, which cost an additional Rs. 5,88,050, locomotive expenses rose by Rs. 3,13,564, traffic expenses by Rs. 1,65,183, and general charges by Rs. 98,887. There was, however, a decrease under special and miscellaneous expenses of Rs. 55,217. For the complete financial year to June 30 the total nett revenue was Rs. 3,04,93,988, an increase against the preceding twelve months of Rs. 4,08,757. Of this total Rs. 94,10,971 is divisible between the Government and the company, the company's share being Rs. 4,70,548, which after deducting Indian income-tax produced in sterling £30,713. There was the trifle of £415 brought forward, making £31,128, and after paying the extra dividend of £1 4s. per cent. there remains £228 to be carried forward. At the date of the accounts the capital account was overdrawn £629,641, upon which interest at 3½ per cent. has been paid, but from July last the Secretary of State provided the company with £500,000 and another similar sum from October 1 last, interest of the whole being at the rate of 3¼ per cent.

Indian Midland Railway Co., Limited.

The separate accounts of this undertaking, which is worked as part of the G.I.P. system, show that in the opening half of 1906 the gross earnings were Rs. 64,78,120, being an increase of Rs. 15,43,108 against the corresponding period, so that despite an increase in the working charges of Rs. 8,15,043 to Rs. 29,97,005 the nett earnings are larger by Rs. 7,28,065 at Rs. 34,81,125. The increase in the earnings from coaching traffic, which reached Rs. 3,14,403, may be described as general, but is mainly in third-class passenger traffic by other than mail trains. Several important fairs were held during the half-year, and the opening of the Agra-Delhi Chord Railway for the full half-year also influenced the traffic. The revenue from merchandise was larger by Rs. 11,31,014, the principal increases being in hay, straw, and grass, gram and pulse, jawari and bajra, oil seeds, railway plant, and rolling stock, while decreases were shown in sugar, raw cotton, and rice. There was also a drop in materials for construction due to less ballast and materials having been moved. A large advance under sundries is attributed to the realisation of outstanding charges for shunting performed for the East Indian Railway at Manikpur and Agra Road. The expenditure, which comes to 46.26 per cent. against 44.21 per cent., is the proportion attributed to the Indian Midland system in terms of the contract with the Great Indian Peninsula.

Bombay, Baroda and Central India Railway Company.

Gross earnings of the combined system for the half-year ended June 30 were Rs. 2,64,06,167, being an increase of Rs. 10,81,197 against the corresponding six months of 1905. Expenditure, however, grew by Rs. 14,39,515 to Rs. 1,16,21,584, leaving the nett income smaller by Rs. 3,58,318 at a total of Rs. 1,47,84,583. The percentage of expenditure to gross earnings was 3.76 higher at 44.01. The coaching traffic shows an increase of Rs. 1,44,130 on the Bombay, Baroda lines and of Rs. 6,72,183 on the Rajputana-Malwa, while the goods traffic produced an additional Rs. 6,10,769 on the former and a decline of Rs. 1,84,670 on the latter. Both lines gathered smaller incomes from sundries and under telegraphs the changes were not important. The principal gains on the two systems in the goods traffic occurred under fodder, metals, firewood, oil seeds, salt, stone and lime, and coal and coke, while important decreases are visible in raw cotton, food grains other than wheat, and wheat and wheat flour. All items of expenditure showed important growth, the locomotive outlay being nearly 6 lakhs larger, while an additional Rs. 3,62,140 was spent on maintenance and Rs. 2,04,957 more on carriage and wagon expenses. Traffic expenses were larger by Rs. 1,44,250 and miscellaneous charges went up by Rs. 73,528. The draft of the formal contract between the Secretary of State and the company embodying the terms on which the company has been reconstituted has just been received, and is under consideration. The certificates representing the new capital stock created under that contract and issued in exchange for part of the old stock will be issued to the proprietors as

soon after its execution as is possible in exchange for the interim receipts held by them in respect of the old consolidated stock, and notice will be given when such exchange can be made. Warrants for the guaranteed interest on the new capital at the rate of 3 per cent. per annum in respect of the six months ending December 31 will be posted on January 5 to the holders which were registered in the company's books on December 10, 1906. The nett earnings for the June half-year to be carried forward towards the yearly total of nett earnings in which the company will share profits when in excess of the sum of Rs. 2,00,00,000 plus interest charges in respect of additional capital provided since January 1, 1906, are Rs. 1,47,84,583, supplemented by Rs. 6,826, the Government share of the nett earnings of the Palanpur-Deesa Railway. It should be borne in mind, however, that the earnings of the second half of any year are invariably less than those of the first half, and that after providing for additional charges under the new contract the nett earnings of the second half of the year may not be up to the average of the past five years. The transactions of the company in respect of the period of 50 years which ended on December 31, 1905, are being dealt with separately from those of the current year, upon which the dividends payable in respect of the new capital depend. The assets and liabilities of the company as at December 31, 1905, have not yet been determined between the company and the Secretary of State, but every endeavour is being made to expedite a settlement.

MADRAS RAILWAY COMPANY.

The gross revenue of this company's main line for the half-year ended June 30 reached £691,372 compared with £610,735 in the corresponding period. Working expenses being less than £1,000 higher at £350,325, the nett revenue gets the benefit of practically all this increase, the total being £341,047 against £261,342. The ratio of expenditure to gross income shows the important decline of 6.54 per cent. at 50.67 per cent. The gross receipts from coaching traffic increased by £20,547, the total number of passengers carried, exclusive of season tickets, troops, and police being 437,114 higher at £4,687,130. Carriage of merchandise, including railway material and revenue stores, gave an additional income of £60,727, the weight of goods handled being larger by 77,414 tons. The principal gains were in grain and pulse, provisions, salt, coal and coke, raw cotton, dyes, and tans and leather. On the other hand, oil seeds, stone and lime, and wood all gave a smaller income. The surplus profits, after meeting all interest charges, were Rs. 5,18,543, which is divisible between the Government and the company in equal proportions. Unfortunately several matters are in dispute, and pending their settlement the Government has only authorised the distribution of Rs. 2,50,000 of the surplus, the company's share being Rs. 1,25,000. This, after providing Indian and English income taxes, permits the payment of an interim dividend of 1s. 6d. per cent., in addition, of course, to the guaranteed interest. There is nothing further to be said in regard to any change in the position of the company after 1907. The contract does not require the Government to give notice of any such change until within six months from April 1 next, that is, no notice need be given until after the expiry of the valuation period on March 31 next. The market price of the company's 5 per cent. stock on April 1, 1904, the opening day of the valuation period, stood at £125 10s., and the mean market prices during the two years and eight months that has since expired is £126 16s. against the present market quotation of about £122. Reference is made to the deplorable effects in the Madras presidency of the recent banking failures, and shareholders are to be asked to authorise a suitable contribution to a relief fund which has been opened on account of the sufferers.

BENGAL DOOARS RAILWAY CO., LIMITED.

Shareholders' satisfaction at the excellent report just issued by this company will be tempered somewhat by the news that since the closing of the accounts the railway has been seriously damaged by floods. An exceptionally heavy rainfall caused breaches on the line, and it became necessary to close large portions of it until repairs and diversions could be made. Fortunately none of the important bridges were seriously injured, and the system was again opened throughout on November 10. It is hoped that the balance carried forward in the nett revenue account will be sufficient to cover the charge for repairs due to this exceptional damage, and as the slight falling off in the receipts is now being made good the ultimate result will not perhaps be very serious. In the half-year to June 30 the gross earnings were Rs. 4,50,632, an increase of Rs. 75,006 compared with the corresponding period, against which the working expenses were actually reduced by Rs. 14,373 to Rs. 2,16,296. This means a decline of 13.41 per cent. to 47.09 per cent. in the proportion of working expenses to gross earnings and an increase of Rs. 87,050 to Rs. 2,28,233 in the nett income. In sterling this income was £15,216 or £5,804 more, and with £10,968 brought in and £36 for interest, &c., there is a total for division of £26,220. The half-year's dividend on the preference shares absorbed £6,840, and after providing an interim payment of 1¾ per cent. on the ordinary stock there will remain a balance of £13,380 to be carried forward. No reply has been received to the directors' letter of May 25 last to the Secretary of State on the question of handing over the working of the railway to the Eastern Bengal State Railway beyond an intimation that it has been forwarded to the Government of India with the request that the authorities will carry on negotiations with the company's agents. The board has urged the Secretary of State and the Government to come to a speedy settlement of the question. Further capital is required for additional works and to pay for those already executed, and the directors propose to issue £28,000 in 4 per cent. preference shares, bringing the total preference capital up to £570,000.

SOUTH INDIAN RAILWAY CO., LIMITED.

This company has a good deal of branch line construction in hand and much more in contemplation, and the board seems to have been in negotiation with the Secretary of State on the probable advantages to both the Government and the company if branch lines within the company's territory were constructed as part of the company's system under a new suggested contract. Further important points such as the renewal of the shops and stores from Negapatam to Trichinopoly, the renewal of a large proportion of the bridges, the erection of staff quarters, and other heavy expenditure both on capital and revenue accounts are also involved in the proposals. If they are favourably received by the Secretary of State and the Indian Government details will in due course be placed before the shareholders. In the six months to the end of June the gross earnings were Rs. 67,61,717 and the working expenses Rs. [illegible], being an increase in the revenue of Rs. 2,82,041 and in the expenses of Rs. 5,33,202, while the ratio between expenditure and income is 5.76 higher at 55.93 per cent. The increase in coaching traffic was Rs. 1,08,139, in goods Rs. 1,41,792 in the telegraph service Rs. 204, and in sundries Rs. 32,856. Including season tickets the number of passengers carried was larger by 398,186, meaning an increase in receipts of Rs. [illegible]. Total goods traffic amounted to 648,728 tons, producing a revenue of Rs. 28,25,129, but no individual items call for special mention. The greater part of the increased expenditure was connected with the renewal and repairs of bridges, which amounted for about 4 lakhs, and will, we are told, be a heavy charge against revenue for some years to come. Locomotive outlay was Rs. 1,19,000 higher, mainly due to the replacement of twelve engines against nine, while the decrease of Rs. 1,26,000 in cost of maintenance of permanent way was owing to the renewal of only eight miles of line against 20½ in 1905. After making adjustment on account of outstandings the nett revenue is brought out at Rs. 30,09,178, from which interest charges and contribution to the provident fund require Rs. 14,[illegible], leaving a surplus of Rs. 15,08,419. The company's share of this is Rs. 2,48,830, which realised £16,215, to which is added the balance carried forward and interest, bringing up the total to £26,571. The directors thereby recommend a dividend of £1 10s. per cent. besides the guaranteed interest of a similar amount, making a total return of £3 for the half-year, equal to a rate of 6 per cent per annum. This absorbs £14,250 and leaves £12,322 to be carried forward.

SOUTHERN MAHRATTA RAILWAY CO., LIMITED.

The gross earnings of this property for the opening half of the present year were the highest ever reached, being 7.55 lakhs over the corresponding period at a total of Rs. 67,18,761. Of this improvement Rs. 6,15,357 was on the company's own line, Rs. 1,00,484 on the Mysore State Railway, and Rs. 60,160 on the other lines worked. This fine advance in revenue was obtained at an increased expenditure of Rs 1,46,264 at Rs. 36,46,643, leaving the nett earnings also the best ever touched, 6.39 lakhs over 1905 and fully 4 lakhs better than 1904. The nett receipts, which came to Rs. 30,72,118, were equal on the Southern Mahratta Railway to 2.09, on the Mysore line to 2.75, and on other railways to 2.52 per cent. on the capital expenditure, including suspense. On the whole system, excluding the West of India Portuguese Railway, which is worked by the company, the mean rate was equal to 2.21 per cent. against 1.75 in the first half of 1905. The number of passengers carried rose by 404,857 and the earning by Rs. 1,83,912, while the increase in the goods traffic of 84,640 tons brought the additional income of Rs. 6,06,906. The largest gains were in grains other than wheat, metals, timber, and miscellaneous, while the largest decreases appeared in wheat and oils and oil seeds. The railway was worked at 54.28 per cent. of the gross earnings against 58.09 per cent. in the corresponding period, a considerable decrease in maintenance charges being more than offset by advances in locomotive and carriage and wagon outlay, traffic expenses, and general and special charges. The company's share of the nett receipts of the Southern Mahratta and Mysore State Railways was Rs. 6,31,298, realising £42,243, and the directors propose a dividend of 15s. per cent beyond the £1 10s. due from the Government, making the total payment on January 1 next £2 10s. per cent. Intimation has been given by the Secretary of State that the present agreement will be terminated on June 30 next as provided in the contract of June 1, 1882, and in accordance with the wishes of the shareholders the directors have recently submitted to Mr. Morley their proposals for continuing under a new agreement the company's administration of the system of famine protection railways which has during the last 25 years been built to complete in British India and in Mysore the [illegible] of the undertaking. In the event of a favourable [illegible] to the proposals the directors will take an early opportunity of laying the new agreement before the proprietors.

EAST INDIAN RAILWAY COMPANY

The voluminous and interesting statement of this company's board for the half-year ended June 30 last reached us too late for full analysis this week. We can only mention that although the gross receipts went up, taken in sterling at 1s. 4d. per rupee, by about £152,000, there was actually a decrease of more than £7,000 in the final disposable balance. Working expenses rose by £133,000, leaving only £20,000 as the addition to the nett

earnings, but interest and other charges showed an increase of £28,000. The percentage of working expenses to gross receipts has always been phenomenally low for this company, but they rose to 37.06 per cent. for the past six months on the gross amount of business done, an increase of 2.84 per cent. Deducting the receipts and charges for the company's own traffic carried the increase was still 2.51 per cent. at 35.20 per cent., a percentage too low for efficiency. During the half-year the management ran 705,514 more train miles. Out of the company's share of the profits for the half-year, which came to £67,213 a dividend of £1 10s. 9d. per cent. is declared on the deferred annuity capital, in addition to the guaranteed interest of 2 per cent.

Argentine Transandine Railway Co., Limited.

Gross receipts for the year ended June 30 last showed a decrease of £429 at £30,610, the decline being about 1.39 per cent. Substantial increase in the finances cannot be expected until the line is completed, and the most satisfactory information in the report just issued is the statement made by the consulting engineers, Messrs. Livesey, Son, and Henderson, to the effect that the new contractors engaged upon the line have completed 75 per cent. of the earthworks in the cuttings and embankments, while the Summit Tunnel makes substantial progress. The 6½ years during which fixed payments of 6 per cent. per annum to the "B" debenture stockholders and 5 per annum to the preferred shareholders, came to an end on June 30 last, when those fixed payments ceased, but the cumulative rights of the preferred shareholders again came into force as from that date. As was arranged in May last, the interest on the "B" debenture stock is now reduced from 6 per cent. to 4 per cent. as from July 1 last, this arrangement to continue for five years, after which the "B" stock will revert to its original position as an income stock, but with the reduced percentage of interest. This arrangement has been sanctioned by the Chancery division of the High Court, and before that period is up we hope to see this company in a flourishing position. Meanwhile the balance of revenue, amounting to £2,552, has been transferred to the completion of works reserve account, which is charged for the five years mentioned with the reduced interest on the "B" debenture stock so far as the ordinary revenue may be insufficient to provide it. The company is largely in funds, and received £4,970 last year as interest upon money lent. Its other income consists partly of interest on the Argentine Railway guarantees rescission 4 per cent. bonds, but £6,456 were drawn from the general purposes fund. Under the working agreement the company received £3,723 from the Argentine Great Western Company as its proportion of the earnings.

Bank of Montreal.

This is a progressive institution, which is gradually spreading its influence over the Dominion of Canada. We have no doubt that its operations are prudently conducted, and the absence of a very large increase in the profits for the year ended October 31 last is an indication of good rather than otherwise in view of the somewhat unrestrained inflation which now seems to be going on in all parts of Canada. After deducting management charges and making provision for bad and doubtful debts the nett revenue for the year is returned at £369,447 or £32,736 more than in the previous twelve months. Instead of two dividends of 5 per cent. for 1904-5 the directors provide four quarterly dividends of 2½ per cent., the last of which was payable on the 1st inst. These dividends required £295,890, leaving with £164,765 brought forward an undivided sum of £238,221. Of that £205,479 is credited to the rest or reserve fund, and £32,842 is carried to the credit of the current year. This fund will now reach £2,260,274 against a paid-up capital of £2,958,904, and it seems to be the policy of the directors to wait until a substantial addition can be made instead of putting small sums by each year. A rather sharp decline of £197,277 to £2,473,171 has taken place in the note circulation, and the deposits not bearing interest are £122,388 smaller at £6,337,476. Deposits bearing interest, however, show an advance of £2,328,875 at £20,354,606, and the total of the balance-sheet is now £34,520,794 compared with £32,513,513. The increase in interest bearing deposits is fully reflected in a rise of £2,727,985 to £20,921,781 in the current loans and discounts in Canada and elsewhere, including certain unspecified assets, with the result that what the bank would call its cash or liquid assets show a reduction of £684,490 to £13,418,189. The gold and silver coin is again larger at £1,280,673, but Government demand notes, which are the equivalent of bullion, have been reduced from £1,483,969 to £1,104,352. Call and notice loans in Great Britain and the United States have been brought back from £7,800,393 to £6,120,050 after showing the great increase to £5,601,452 a year ago, but investments are £424,213 larger at £2,125,881 and notes and cheques of other banks have gone up from £725,856 to £908,013.

The Peninsular and Oriental Steam Navigation Company.

This company's year ends on September 30, and the story its board have to tell of the twelve months' business is always interesting. Last year the company about held its own in spite of adverse circumstances, such as the demoralisation of the Eastern trade caused by the contest between English and German lines engaged in the Antwerp branch of it. The Australian freights have also suffered considerably through competition, and there was a fall of nearly 50 per cent. in the carrying rates for refrigerated produce. Naturally, therefore, the freight revenue of £1,521,309 showed a decline of £67,475 on the preceding year. Of this, however, £31,000 is due to less Government work and lower rates on what of it was done Passenger revenue, on the other hand, went up by £102,719 to £1,087,407, and had it not been that the working expenses were increased by upwards of £100,000 owing to the larger vessels employed and greater speed in the mail service, the nett revenue would have shown an increase in spite of the backwardness of that portion of it drawn from cargo. As it was, the free balance, including £10,946 brought forward, was £219,852 or almost identically the same sum as the accounts of a year ago showed. Accordingly the directors are able to pay the preferred stock dividend, to give a final dividend of 6½ per cent. on the deferred stock, together with a bonus of 3 per cent. or 13 per cent all told, making with the preferred dividend 9 per cent. on the entire paid-up capital of £2,320,000, leaving £11,052 to be carried forward. The value of the fleet has gone up from about £8 11s. to £10 7s. 6d. per ton, but that is attributable to the large number of new ships brought into use during the year, and the company continues to make handsome provision for the fleet depreciation, having added this year £79,000 over and above the regulation 5 per cent. upon its value, which came to £382,097. Thus altogether £461,097 was assigned for this purpose as against £536,000 a year back. The entire revenue from passage money and freights came to £2,608,716, and in addition the company received £350,246 for Government services and as naval subvention. The earnings from interest, discount, and exchange also came to £76,529, so that altogether, including the balance brought forward the gross income was £3,046,437. The expenses of navigating the ships took £1,240,387, provisions £294,466, Suez Canal dues £330,000, general administration £179,590, miscellaneous expenses £23,136, and repairs and general maintenance charges £210,816, besides which £15,502 was paid for insurance. These figures indicate what a vast business the company does, and it will be interesting to know how it is going to fare in regard to the new Australian mail contract. The present Indo-China and Australian mail contract is a provisional one, which will expire in less than fourteen months' time on January 31, 1908, and the directors would seem to have no apprehension as to their position in relation to the new one. They have no reason to suppose that any proposals of a more eligible kind have been made to the Government, and the delay which has arisen in bringing this matter to a decision is understood to be caused by the necessity of consulting the Indian and Colonial Governments, which are interested in the mail service and contributories to the postal subvention. Is it only the Orient Company, then, that the Australian Commonwealth Government is seeking to drive out of this business? If not why did it accept a tender for a new service from a syndicate composed principally of shipbuilders? Have all the ships necessary under that contract been laid down yet, and if not what is the Commonwealth going to do at the end of the present intermediate period if there are no ships forthcoming? A noticeable step is mentioned in this report which should have an excellent effect. It is the establishment of what may be called a college of cadets, by the company in order that it may train up officers for its service. The company in the case of candidates selected under its proposed arrangement will contribute half the *Worcester* training ship fees or £35 per annum over a period not exceeding three years, and when the cadets have passed will then take them into its own service as sub-officers without premium, or pay half premium for a year or two years' training in sailing ships. This seems a new departure of considerable importance.

The Peruvian Corporation, Limited.

Much of the report of this well-known body is taken up with a restatement of the long dispute between it and the Peruvian Government. We need not go into it further now than to say that no settlement has been arrived at, but the directors of the corporation have not given up hope that renewed discussions may ultimately lead to a reasonable settlement. We trust that hope will be justified, otherwise the corporation's position promises to become one of increasing difficulty as years go by, for recently the Peruvian Government appears to have arranged for a loan of £3,000,000 to be provided by German banks, and what between Germans and Yankees, both struggling to get a foothold in the valuable territory of this Republic, the corporation may fall upon bad times. Last year, however, it made a profit of £268,998, which, added to the balance of £166,707 brought forward, gave £435,705 as the total amount available for distribution. Deducting various small sums on account of colonisation and insurance of lake steamers, the final nett balance was £426,373, out of which £75,000 was set aside to reserve, raising it to £475,000, and from the balance 30s. per cent. will be paid on the preference stock, besides which an additional 2 per cent. is to be given on the old 6 per cent., but now 4 per cent., debentures, which will take £74,000 more. After these assignments have been made £165,698 will be left to carry forward, but the company has had to use most of its reserve and all this balance for capital purposes, owing to its inability to raise fresh money, and its total investments apart from the stocks and shares in various Peruvian railways held by it amount to only £131,267, all entered at cost and presumably considerably depreciated, seeing that the investments are first-class, gilt-edged securities. Most of the railways belonging to the corporation did but poorly last year in the way of nett revenue. Altogether the increase in nett income was about £7,000, but the majority of the lines show decreases, thanks principally, if not entirely, to the increased cost of working. In fact, working expenses are going up all round, and the corporation's general manager is requiring additional rolling-stock.

Ten new first-class passenger cars and 20 flat cars have been ordered in addition to those delivered, as well as six additional locomotives. These have to be paid for in part out of the revenue of the past year, with a balance left over for future years. Among debts owing to the corporation we find £153,514 due by the Bolivian Government, and this is to be increased by a further loan of £78,000 required to extend the Bajada Railway to the centre of the city of La Paz, and other purposes. Then the Peruvian Government owes large amounts of money, altogether apart from the annuity of £80,000 per annum promised under the original contract and never paid; but the Government and the corporation seem to rub along fairly well, all things considered, their relations being that of grumbling toleration on both sides. Last year's guano revenue was £8,459 less than that of the preceding year, and amounted to only £178,225 in spite of the fact that freights ruled on an average 2s. 3d. per ton lower than in the preceding year. This is a diminishing asset in fact, and provision ought to be made against its final disappearance. On the whole, then, the report and accounts are not much calculated to support a "bull" speculation in the company's securities on the Stock Exchange.

The Amalgamated Press, Limited.

Another year has gone by—and they do run very fast—for this company, whose meagre report and rather attenuated balance-sheet is once more before us for the twelve months ended October 31 last. It is the tenth presentment of the Harmsworth agglomerati's accounts and the exhibit is good, take it altogether, although the nett profit of £256,615 is only £1,096 larger than that of the preceding year. The directors, however, have written £6,500 off for depreciation in the value of investments, but if we mistake not, last year's appropriation to this purpose was £45,004. In addition, £25,000 has been applied to depreciation and £25,000 added to the reserve just as in the previous year, but the addition to the reserve comes out of the profits as stated. Out of the balance, however, the directors are able to pay a final dividend at the rate of 30 per cent. per annum, making with the 25 per cent. rate paid *ad interim* 27½ per cent. for the year. To this they add a bonus of 2s. 6d. a share, equal to 12½ per cent. more, so that the total distribution on the shares will amount to 40 per cent. for the year, which is the same distribution as was made a year ago, and 5 per cent. more than the dividend and bonus of two years ago. Less outlay on new capital would seem to have taken place in the past year for including the purchase of goodwill and copyright, which continues to figure for £780,000, the total value of the properties owned by the company is down £8,176 compared with the previous year, at £912,484. In other respects, too, the balance-sheet seems to be a little improved, for the amount due by sundry debtors is £32,220 down at £63,538. This is rather more than the figure went up in the previous balance-sheet. No details of investments are now furnished, but the total, after writing off £6,500, stands at £344,845. The company is strong in cash, the total at bankers on short loan or current account and in hand amounting now to £172,307, or £16,567 more than that of twelve months back. From all we can see, therefore, the position is now a strong one, and the reserve is slowly creeping up, its total being now £225,000, while the current obligations of the company to creditors amount to only £60,389. Surely a prosperous business.

Santa Fe Land Co., Limited.

Companies owning real estate in the Argentine have been sharing the general prosperity of the country, and many enterprises which a few years ago seemed in a very bad way are now making steady progress towards a healthier condition of affairs. This company's total revenue for the twelve months ended June 30 was £75,207, and after providing for all expenditure, depreciation, repairs, and debenture interest the balance remaining is £48,183, an improvement of something like £11,700 compared with the previous year. Cattle, timber, and sundries all contributed to the better figures which were attained in spite of a decline in the receipts from lands. Rentals received during the year were only £4,296 compared with £5,050, and the sales of land, of which one-third is brought into the revenue account, produced no more than £14,940 against £21,731. The credit from the previous year was £8,647, making a total of £56,831, and the directors propose to increase the dividend from 5 per cent. to 6½, adding £6,000 to reserve and substantially increasing the carry forward to £11,018. During the past few years the company has used as its camp the estancia of Santa Catalina, but the increase in stock has rendered necessary the purchase of a much larger territory. The directors have therefore bought the estancia of La Barrancosa, which is well situated for railway communication and has an area of over 26,000 acres of alfalfa and arable land. Considerable improvements have already been effected on this new property, which had cost £123,075 up to September 30 last, but the directors point out that further improvements will be necessary, such as renewing part of the old fencing, sowing further areas with alfalfa, and repairing the wells. The company's freehold land has a balance-sheet value of £460,830 and the estancias, apart from the one just purchased, are entered at £186,746. This includes the book value of the cattle £80,461, but a valuation of the animals on June 30 last brought out a figure of £146,225, the number of cattle represented by this sum being 50,074. The difference between these two items constitutes an important hidden reserve. Branch railways, land, and materials are put down at £40,185 and various investments at £33,784, while £2,860 has been expended on certain works in execution. Sundry debtors are £21,062 and the cash balance is £58,550, but at the date of the balance-sheet the company had rather important liabilities. A sum of £16,411 was due to sundry creditors, £5,000 on bills payable, and £15,438 in connection with the annuity for the Santa Catalina estancia. There was also a temporary loan, to pay for the La Barrancosa estancia, of £125,000, but this debt was liquidated out of the proceeds of the new issue recently made. The reserve fund will now amount to £40,000, a sum of £21,129 has come in from share premiums, and £1,673 is held as a reserve against fluctuations in the value of paper currency.

Argentine Southern Land Company.

A portion of this company's lands has been transferred to a new undertaking called the Port Madryn (Argentina) Company, and the profit on the transaction apparently amounted to £35,967. Apart from this, however, business during the year ended June 30 was decidedly good, and the total revenue, including the above-mentioned profit, rose by £52,105 to £73,146. After meeting all charges and writing £763 off investments the nett balance was £38,137 up at £54,614, out of which £25,000 is put to reserve against £5,000 a year ago, and in addition to doubling the dividend at 10 per cent. a bonus of another 10 per cent. is paid on account of the land sales, leaving £13,814 or £1,945 more to be carried forward. A year ago the property and live stock accounts were stated separately in the balance-sheet, but this time the two items are lumped together, and notwithstanding the decrease of 17,000 acres to 1,248,080 acres in the land owned show an increase of £52,285 at £174,170, against which the reserve now amounts to £45,000. This increase, however, is evidently due to the establishment of a special herd of pure-bred short-horn cattle, which has been formed for the purpose of breeding first-class bulls. Sundry creditors are comparatively trifling at £9,200, while sundry debtors owe £55,257, stores, &c., in hand are valued at £13,962, and in addition to £3,138 in cash the company holds £7,477 in Government stock. The company has suffered, for the first time on a large scale, from cattle stealing, the deficit amounting to 1,534 head, nearly all from Chubut, the most remote portion of the Andine estate, and in order to avert this danger in future the whole of that part of the property has now been fenced in. A concession has been applied for by the Central Railway of Chubut Company to extend its line by about 150 miles westward to Paso de los Indios. At this point the rich grazing lands of the valleys of the Cordillera begin, and it is hoped that the extension will greatly hasten their development, thereby considerably increasing the returns from the estancia business.

E. Rich and Co., Limited.

No appreciable benefit was derived by this company from the prosperity of Australia during the past season, or at least it was unable to show any sensational improvement in its trading profits for the twelve months to September 30. These were only £604 up at £15,782, and as managing director's remuneration, directors' fees, and other charges increased by £422 to £2,784 the nett profits were a mere £182 better at £12,999. Even this gain was largely neutralised by the smaller balance of £1,490 brought in, leaving the amount available at £14,489 compared with £14,412, so last year's dividend of 4 per cent is repeated, and after writing off £5,000 for balance of goodwill £1,568 or £78 more is carried forward. Liabilities to sundry creditors and bills payable have jumped from £41,672 to £78,637 against which there are increases of £55,411 to £154,302 in stocks and £5,615 to £21,307 in bills receivable, while sundry debtors are down £16,843 at £73,237, and cash is practically unaltered at £9,462. In addition to writing off goodwill the directors appear to have allowed £2,070 for depreciation on freehold and leasehold properties, &c., and £4,038 on steamers and barges bringing these items down to £17,603 and £4,000 respectively. We do not know what is the reason for this enormous increase in stocks, but the directors evidently expect to do a considerably greater business during the current year, as they talk of there being every reason to hope that the season will be a prosperous one.

Isle of Thanet Electric Tramways and Lighting Co., Limited.

The report for the year ended September 30 shows that this company is having a desperate struggle for existence, either because the season in the towns served by it is too short to provide sufficient business to make it remunerative or because the dreadful accidents at Madeira Hill, Ramsgate, in 1905 are still vivid in the minds of the public. Gross traffic receipts increased by a trifle of £173 to £32,254, and some little headway was made in the lighting department, which yielded an extra 401 at £3,272, the total revenue being £660 up at £35,854. General expenses, however, rose by £271 to £11,551, and maintenance cost £427 more at £4,826, so that in spite of a reduction of £195 to £6,036 in power station expenses and the surrender of half their fees by the directors the nett revenue was only £132 better at £12,049. Of this debenture interest absorbed £6,272 against £8,600, and as the directors propose to write another £300 off improvement of cars account, and to place £2,000 to a reserve and renewals account, they can only pay one quarter's dividend on the preference shares, leaving fifteen months in arrears. Out of the balance brought forward £272 was written off for rates suspense account, bringing it down to £775, and the amount now carried out is further reduced to £277 by the above-mentioned allocations. Nothing has yet been written off for depreciation, and with £11,262 spent on extra works and extension to South-Eastern Railway terminus the property account, after deducting £3,750 received from the Thanet Cor-

struction Company, stands at £457,512. Besides this the company has spent £6,825 on additional electrical equipment and traction cables, £3,417 on land and buildings, £12,735 on additional rolling-stock, and £16,035 on electric light installation, or a total outlay of £496,524, and as the issued share and debenture capital is only £450,000 another £50,000 has had to be borrowed on security of debenture stock deposited.

Societe Francaise des Pneumatiques Dunlop, Limited.

There is a Dunlop Pneumatic Tyre Company in France as well as in England, but the Gallic concern is much the more modest enterprise. Its issued capital is only £139,807, including calls unpaid of £7, and it is not unfortunate enough to possess a debenture debt. Goodwill and patent rights are valued at only £31,329, which contrasts strangely with the four millions or thereabouts at which the goodwill of the English concern stood before the recent reconstruction reduced it to a less monstrous total. Freehold land and buildings seem very small at £13,099, and the plant, machinery, fittings, &c., stand at £31,241, the principal asset being stock on hand £114,683. The rather considerable amount of £43,089 is owing to sundry creditors, but this is about balanced by the sum to come in from debtors, and the company possesses cash and bills of £6,621, besides investments at cost £12,367. We wonder what the latter are really worth. The total additions to the properties mentioned for the year were about £15,000, this money being spent in pursuance of the policy outlined in the last report to enlarge the mills at Argenteuil and to put up further plant and machinery. The changes brought about by these enlargements only affected the output for the concluding portion of the past year, but the demand for the company's goods continues to increase, and the directors think there is little doubt that the full advantage of the mill development will be made apparent during the coming year. So confident are they that an increase in business will be brought about that 20,000 new shares are to be offered for subscription at a premium of 2s. each in order to provide for the expected increase in turnover, the consequent rise in stock, and the payment of dividends without overdrafts on the company's bankers. In the last twelve months, which ended on July 31, the company made a nett profit of £25,488 and £556 came in from dividends and transfer fees, making £26,044. Directors' and auditors' fees take £989, a sum of £1,000 is reserved for debts and depreciation is allowed to the extent of £2,163, leaving £21,892. The sum brought forward raises this to £67,558, and the directors use £31,329 to write off the item of goodwill and patents, so that henceforth it will disappear from the balance-sheet. The preference dividend next requires £2,994, and after paying a dividend of 10 per cent. on the ordinary shares, amounting to £6,514, there is a balance of £26,721 to be carried forward. What a pity the finances of the English company could not have been handled in this prudent fashion!

Aron Electricity Meter, Limited.

The English portion of this company's business does not appear to have yet reached the profit-earning stage, but the directors are hopeful, and in the meantime trade in Germany and Austria continues satisfactory, and sufficient progress was made in France to enable that subsidiary to contribute to the income of the parent undertaking. Gross profits for the twelve months ended September 30 consequently rose by £5,042 to £30,329, and although dividends, interest, and transfer fees produced a trifle less the revenue was £4,956 larger at £31,388. An additional £452 at £5,573 was allowed for depreciation, but maintenance of patents only took £677 against £2,983 a year ago, and with debenture interest and sundry miscellaneous items written off the total expenditure was £533 less at £14,175, leaving an improvement of £5,489 in nett profits at £17,213. With £4,016 or £3,604 more brought in the disposable balance was £9,093 up at £21,229, of which the usual £2,500 is transferred to debenture sinking fund in accordance with the terms of the trust deed. The directors are then able to pay 6 per cent. on account of arrears of preference dividend, to write off £3,818 for balance of discount on debentures and expenses of issue and £1,000 for an advance towards the development of the business in America, and to carry forward a larger balance of £6,417. Arrears of preference dividend will now amount to £21,232, and the directors promise that should business continue as at present they will make a further distribution on April 1 next. Additions to premises, machinery, &c., cost £5,599 or a trifle more than the allowance for depreciation, but with the capital reserve of £7,514 and £9,626 applied in redemption of debentures deducted the book value is brought down to £184,630 compared with £187,104 a year ago. Sundry creditors come to no more than £7,676, against which sundry debtors have increased by £11,282 to £46,309, and stocks are valued at £48,275. Loans against securities have been reduced by £1,500 to £17,500 bills receivable by £1,094 to £715; but cash is £3,682 higher at £7,868, and investments are valued at £14,548 or £1,361 more.

Worthington and Co., Limited.

We believe this important brewery business used to boast that it never advertised its goods, but it seems to be the intention to depart from that policy, notwithstanding that the business appears as profitable as ever. Although compensation fund charges had to be met the trading profit for the twelve months to September 30 was £151,615 or an increase of £2,606 against the previous year. Interest on debenture stocks and dividends on preference shares require £62,850, leaving £88,765 to provide dividends on the £268,000 of ordinary capital still privately held. What the dividend is the directors do not permit us to know, but it must be pretty substantial because last year the sum carried forward, including special reserves, was £365,359, while the amount brought into the account is £308,788, indicating that over £56,000 was divided. The amount now carried forward is £397,554, and we must wait till next year for some idea of the dividend to be paid on account of the period under review. A further increase of £53,390 to £1,596,313 has taken place in the investments, loans, interest, and cash, but in which of the constituents forming this item the advance occurs we do not know. The land, brewery, malthouses, and other assets incidental to the business, including goodwill, have been slightly reduced from £780,580 to £778,878, while the book debts of £178,198 are almost precisely the same. Stocks have decreased a little to £118,221, but mortgages on trade investments are up again from £45,027 to £48,896, although it is only fair to point out that last year the reduction was the substantial one of £44,714. Creditors are also somewhat larger at £425,160, but the company has an ordinary reserve account of £250,000 apart from the special reserves of fully £300,000, and there is no reason to doubt the soundness of the general position.

Northampton Brewery Co., Limited.

Although this company cannot maintain the dividends paid two or three years ago, it continues to do a profitable business, and for the twelve months to September 30 returns a total income of £98,153 and a nett balance of £38,430, after providing all general expenses, repairs and depreciation, and interest on mortgages, loans, &c. Debenture interest takes a further £15,000, and £1,777 is payable to the compensation fund, and after meeting the dividend on the two classes of preference shares 9 per cent. is paid on the ordinary capital. The directors then add £3,000 to the general contingency fund and carry forward £10,482 compared with £10,354 brought forward. Contingency fund is now £6,000 and the reserve £50,000, while the property account appears at £607,239, apart from the plant, machinery, carts, horses, &c., £38,150. In addition to the debenture debt of £300,000 there are mortgage loans and deposits of £74,107 and £22,416 is owing to sundry creditors. Debtors and loans to customers amount to £33,770 between them, stock is worth £38,366, and cash and bills appear at £11,378. On the whole, a fair position, but not too strong.

Bentley's Yorkshire Breweries, Limited.

A further shrinkage of £2,811 to £93,914 took place in the trading profits for the year ended September 30, while the income from rents only rose by £81 to £26,344, making a total revenue of £120,258 compared with £122,988. Against this, however, a saving of £666 at £37,784 was effected in general expenses and £2,874 less at £13,403 was allowed for repairs, renewals and depreciation, so that had it not been for the heavy compensation charge of £3,929 the nett profits would have been a few hundreds up. As it was, the amount available, including the large balance of £4,524 brought forward, showed a decrease of £685 at £54,046, and after providing £26,772 or £176 more for debenture and loan interest and meeting preference dividend the directors again reduce the dividend on the ordinary shares by 1 per cent. to 3 per cent., and by placing nothing to reserve compared with £4,000 a year ago are able to add £1,489 to the sum carried forward, making it £6,013. Although depreciation is said to have been allowed on leaseholds, the item of freehold and leasehold properties, machinery and plant is only a trifle of £810 down at £1,004,179, while casks, horses, rolling-stock and loose plant are valued at £25,722. Loans are down £758 to £52,643 and sundry creditors have been reduced by £5,434 to £31,567, and on the other hand a decrease of £3,533 to £61,988 in stocks was accompanied by an advance of £5,685 to £93,694 in sundry debtors. Cash, including £15,347 or £2,965 less in the hands of the debenture trustees is £3,080 smaller at £15,718, in addition to which the company holds trade and other investments for £12,016.

Strettons' Derby Brewery, Limited.

A moderately good recovery took place in the profits of this business for the year ended September 30, the shrinkage shown in the previous year being more than made good. Including £6,389 for rentals and interest, the trading income was £54,578, an increase of £5,153 compared with a decline in 1904-5 of £4,606. Repairs and depreciation required £9,365, but there is a further credit of £9,225 for dividends on investments, while £14 came in from transfer fees, restoring the available balance to £54,451. Various charges for directors' fees, management salaries, income-tax, and £1,881 provided for the compensation fund altogether reached £6,700, leaving £47,751, and after providing £14,530 for debenture, loan, and mortgage interest the actual nett credit is brought out at £33,221. The balance brought forward was £8,539, making £41,760, from which the dividend on the two classes of preference shares requires £11,800. The dividend on the ordinary capital is then maintained at the old figure of 10 per cent., the sum of £10,000 or £2,500 more is added to the reserve fund, and the credit carried forward is moderately increased to £9,160. The company's own capital outlay reaches a sum of £552,597, including nett additions for the year of £6,502, besides which £81,890 is invested in shares of the Midland Brewery and £62,134 in ordinary shares of Alton and Co. The reserve fund, now increased to £90,000, is therefore not too much. The fixed debenture debts add up to a total of £200,000 or rather less than the share capital, which is a better proportion than a good many breweries show, and the mortgages and loans including interest are comparatively modest at £32,570. Trade and sundry creditors

amount to £19,855, and the absence of a good supply of liquid assets is the weakest point in the company's position. Debtors, including loans, are no more than £31,016, stock seems rather small at £11,686, and against an undivided profit of £31,560 the cash balance is only £956, including certain amounts in the hands of the debenture-holders' trustees. There is, however, a sum of £7,112 to come in from shares in the two breweries mentioned, which will help towards the payment of the final dividends.

WENLOCK BREWERY CO., LIMITED.

The trading profits of this well-known brewery business for the year to October 31 showed a recovery of £6,482 at a total of £69,853 compared with the previous twelve months, but against this there was a decline of £5,233 to £25,025 in the rents receivable, interest on loans, transfer fees, &c., and one is set wondering what these changes imply. Do they mean that some of the company's customers have been unable to meet their obligations, and that their businesses have been retransferred to the company, thus increasing the direct trading profit and decreasing the payments made by tenants? However, the total income is a good £1,000 better at £94,878, and after meeting expenses of £35,937 compensation fund charge of £1,005, directors' and trustees' fees £2,205, and interest on debentures, loans, and deposits £16,070, besides depreciation of £9,247, the balance of nett revenue is £30,414. The sum brought in was £2,101, making £32,515, and the directors use £3,000 of this money to write down properties and loans accounts. The dividend on preference shares next requires £7,500, and after repeating the 10 per cent. payment on the ordinary shares there is £2,015 to be carried forward. The balance-sheet does not convey much information, but the freehold brewery, plant, and goodwill are valued at £214,905, and the properties at cost amount to £602,837. If our reading of the position is a right one, the reserve account, although pretty substantial-looking at £130,000, is probably not too large. Loans and deposits with accrued interest appear at the considerable amount of £55,218 and £14,501 is owing to sundry creditors, making a total of £69,719, and on the other side the book debts, &c., are small at £16,889, stock is £15,911, and the cash balance only £22,018, of which £18,750 will be required for final dividends.

MASSEY'S BURNLEY BREWERY, LIMITED.

A sharp improvement of well over £5,000 at a total of £41,962 took place in this company's gross profit during the year ended October 31 compared with the previous twelve months. Rents and interest on loans, &c., also gave a little more, and the total income was therefore £48,428 against £43,043. Unfortunately the whole of this improvement and a good deal more was swept away in various exceptional charges, so that the nett revenue was quite £1,000 lower at £22,340. We need not mention all the items on the debit side of the profit and loss account, but wages and salaries went up by £870, repairs cost £1,451 more, and £2,324 has to be provided for loss on licences referred for compensation, together with the inevitable law costs. A sum of £2,153 is also allowed for the balance of cost of rebuilding the Cross Keys Inn against £850 last year, and £450 is set aside for depreciation on Consols, quite a long story of misfortune. It renders necessary the transfer of £2,000 from the equalisation of dividend fund to the revenue account, bringing up the total income, including credit from last year and transfer fees, to £24,728. Debenture and other interest, directors', trustees', and auditors' fees take £10,294, leaving £14,434, and after providing the preference dividend two payments aggregating 8 per cent. are made on the ordinary shares, and £434 is carried forward against £379 brought in. The depreciation allowance for the year, deducted from the revenue, was £1,500, raising the depreciation fund to £11,000, and the whole of this has been written off goodwill account, reducing it to £9,000. The £2,000 allowed for loss on licences is, of course, deducted from the property account, and since the additions for the year were quite trifling this item has been brought down from £356,228 to £354,234. Equalisation of dividend fund is now reduced to £2,000, and apart from that the company has no accumulations of any sort. Trading accounts are rather adverse, and £3,446 has been raised on mortgage or loan, but stocks of various kinds are worth £20,103, the total cash balance is £13,104, and the investment in Consols is now apparently at its market value £2,606.

WOLVERHAMPTON AND DUDLEY BREWERIES, LIMITED.

No information is forthcoming from the directors with regard to the business done by this company, but the figures for the year ended September 30 show a fair improvement of £3,459 in trading profits at £42,149. With £402 more at £9,198 from nett rentals the total income was £51,347 against £47,486, and after increasing the allowance for depreciation by £303 to £6,128 and providing £620 for bad debts the surplus was £3,402 larger at £40,339. Including £6,487 or £1,892 more brought forward and £11 received from transfer fees, and deducting administration expenses, interest, and the new charge of £1,505 for compensation fund, the nett profits were £3,650 larger at £20,387. So the directors raise the dividend by 1½ per cent. to 12½ per cent. and by reducing the balance forward to £1,012 are able to place an extra £8,000 at £14,000 to reserve, making that fund £100,000, and to put another £500 to the superannuation fund. A further sum of £5,557 was spent on property account against £1,060 written off, leaving this item £3,506 higher at £415,402, but the new brewery, maltings, and stablings are again untouched at £26,858, and plant, machinery, &c., has been reduced on balance by £2,470 to £19,108. The total value of these capital assets is therefore £461,458, and as the share capital is only £150,000 the company in addition to issuing £200,000 in debenture stocks has had to borrow £42,241 on mortgages and loans, while the reserve fund is all in the business. Trading accounts pretty nearly balance, £13,392 being due to sundry creditors against £13,172 to come in from debtors, while cash is £1,360 down at £2,135, but stocks seem fair at £27,562. The company holds £11,100 of its own "A" mortgage debenture stock.

ARNOLD PERRETT AND CO., LIMITED.

When the profits of this brewery fell off a year ago the reduction was ascribed to the heavier cost of hops and to the Bristolians having developed a taste for cider in preference to beer. In the twelve months ended September 30 there was a further decline in sales, especially in the earlier part, but the directors do not trouble to offer any explanation and merely state that the present outlook is somewhat brighter. Apparently they consider that they are absolved from the necessity of entering into details by the fact that owing to cheaper hops and economies effected in other directions gross profits rose by £2,441 to £55,757. Nett rentals gave £227 less at £8,054, leaving the income £2,014 up at £63,811, of which expenses took £22,861 and £9,641 or £337 less was written off for depreciation. Then £1,728 had to be provided for compensation fund charge for licences, the first occasion on which the item has appeared in the accounts, but even after this had been deducted the nett profits were £1,055 better at £29,581. A smaller balance of £484 was brought in, and transfer fees gave £13 against £15, making the available total £30,079 compared with £29,429. Debenture and other interest absorbed £100 more at £13,144, so that after meeting preference dividend the dividend on the ordinary shares is again the poor one of 2 per cent., leaving £935 to be carried forward. Freehold land and buildings are a trifle down at £579,486; leaseholds, too, have been slightly reduced at £4,956, and plant, rolling-stock, &c., is practically unchanged at £83,984, the total of these capital assets being £668,426, and against this the reserve stands at the insignificant figure of £6,000, of which all but £700 is in the business. Floating liabilities are £1,057 lower at £13,667, while sundry debtors show a reduction of £1,511 at £18,744. Loans receivable are £753 down at £2,250, and stocks are valued at £27,890 or £1,348 less, but cash has risen from £8,481 to £12,724.

W. BUTLER AND CO., LIMITED.

This is a rather large brewery business, the total of its assets being £1,171,874, of which £978,305 is represented by brewery and malt-houses, public-houses and fixtures. Plant and machinery, &c., represented a value of £66,916, and it is good to see that the goodwill attached to these properties has been written down from its original amount of £62,653 to £13,000. Stocks at brewery, at wine and spirit stores, and in managed houses appear at £72,146, but creditors are fairly heavy at £48,388 against debtors and loans £22,364 and cash £12,709. Reserve, contingency and licence insurance funds reach a total of £100,363, but as with practically all brewery companies they are invested in the business. The share capital is only £450,000, so that the fixed debts are pretty heavy, mortgage debenture stock having been raised to the amount of £350,000, while loans on mortgage and other securities amount to £196,120. Profit at the brewery for the year to September 30 was £70,241, and £124 came in from dividends and transfer fees, or £70,365 in all. Rather more than £18,000 is allowed for depreciation and repairs, bad debts take £327, and directors' fees £2,000, leaving £40,614. Interest on debentures, loans, and mortgages amounts to £25,358, and £18,000 is required for the preference dividend. A further sum of £4,116 is required for the year's contribution to compensation fund, and the directors also propose to write off appreciations charged under the Birmingham Surrender scheme and to write down to value as unlicensed the houses whose licences have been taken away under the Compensation Act. This means a further sum of £6,473, so that not only must the ordinary shareholders go without a dividend, but the sum carried forward is only £921 against £5,276, meaning that the directors utilise £4,334 in excess of the actual profit earned.

WARWICKS AND RICHARDSONS, LIMITED.

The share capital of this company amounts to £500,000 against an actual expenditure of £508,960, and since £75,000 has been raised on mortgage, money on deposits amounts to £20,274 and reserve and pension funds exist to the amount of £45,900, it follows that the business is tolerably well off. It, for example, has a total cash balance of £37,198, and has invested £44,230 in mortgages and trade investments, including a second mortgage for £15,000 on Morris' Rutland Brewery, the first and second mortgage debentures of which Warwicks and Richardsons guarantee. Stocks of various kinds have a balance-sheet value of £43,604, and debtors amount to £56,258 against creditors of only £11,381. In the year to September 30 the profit on brewing was £37,809, rents receivable, after deducting rents payable, yielded £6,759, and interest and transfer fees £1,776, making a total of £46,564. Charges of various kinds, including £1,376 for the compensation fund, amounted to £11,180, and after adding £2,500 to reserve the balance over is £31,884. With £2,109 brought in the credit for disposal is £33,994, from which income-tax takes £602 and the preference dividend £15,000. The ordinary shares then receive 8 per cent. and £2,401 is carried out. The directors say in their report that they have acquired the control of the old-established business known as Morris' Brewery at Oakham, which is now formed into a separate limited company. In consideration of this control the guarantee already mentioned has been given, and besides the second mortgage of £15,000 the company has

acquired the entire share capital, which it is to be assumed, appears under the mortgages and trade investments.

J. W. Cameron and Co., Limited.

The changes shown in the capital account of this important brewery company in respect of the year to September 30 last were not important. On the same date in 1905 the properties stood at £1,163,185 and £8,633 has been written off for redemption of leaseholds and for lost licences, while the nett additions for the year were £3,674, leaving the total at £1,158,225. The entire reserve fund of £265,000 together with the licence insurance fund of £1,000 are employed in the business, and notwithstanding this the directors are glad to make use of £37,402 raised by way of bank loan or left on deposit. Sundry creditors are fortunately small at £11,713 against debtors of £53,654, stocks are valued at £73,951, and the cash at bankers and in hand is £5,930. The gross income for the year is returned at £104,269, and after providing for repairs and depreciation, leasehold redemption, bad and doubtful debts, the compensation charge of £3,455 and £7,500 for licences referred for compensation, being the loss over and above the amount to be received, the balance left is £80,214. Debenture and loan interest and other charges reduce this to £54,988, which provides the preference dividend, payments aggregating 12 per cent. on the ordinary shares, with £12,500 to reserve, £400 to licence insurance fund, and £1,050 carried forward against £662 brought in.

St. Louis Breweries, Limited.

An increase of 9,993 barrels to 699,087 barrels in the sales for the year ended September 30 was accompanied by savings in the cost of materials, and trading profits were £5,287 better at £225,179. Interest on investments and other receipts, however, gave £1,658 less at £4,950, making the improvement in the revenue only £3,629 at £230,129. Repairs took £353 less at £42,326, and the allowance for depreciation was cut down by £702 to £20,261, while interest charges were also smaller at £60,562, so that the nett balance was £4,992 up at £106,980. Including £20,192 or £111 more brought forward the amount available was £127,172, of which dividends took £107,101 and £20,071 was carried forward. The English company's share of the dividend was £107,072, and with interest and transfer fees and £9,426 brought in the amount available after providing for expenses was £114,120, and out of this the directors pay a full year's dividend on the preference shares, with an additional 3½ per cent. on account of arrears against 3 per cent. a year ago, and increase the balance forward by £1,194 to £10,620. This leaves only 3½ per cent. still to be cleared off, so that if the present business is maintained there is hope of the ordinary shares receiving some return a year or two hence.

Chicago, Breweries, Limited.

Sales of beer by the two breweries increased by 10,062 barrels to 239,721 during the twelve months ended November 30, and it is stated that the American concerns wrote off £32,660 for repairs, renewals and depreciation and £8,479 for bad debts before arriving at their nett profits. What those profits were is not disclosed, but that they were decidedly better is evident from the fact that about £3,000 more at £43,716 was paid to the English company in dividends. Interest on loans produced £1,880 less at £3,876, but with miscellaneous receipts the total income was brought out at £47,792 compared with £45,694. Administration charges in London were slightly heavier at £3,736, but debenture interest and redemption took £1,891 less at £17,558, and after providing for income-tax the nett balance was £3,823 up at £25,352. The amount brought forward was also considerably larger at £16,122, giving an available total of £41,474 compared with £35,122, and after raising the dividend by ½ per cent. to 5½ per cent., the directors transfer £16,000 to reserve, the first addition since 1893, but carry forward only £4,574. During the year a further £13,500 of the debentures were purchased and cancelled, leaving £276,500 outstanding. Shares in the American companies are still valued at £669,143, but loans and accrued interest are £8,067 down at £74,626, and against these two items there are the reserve of £54,223 and a debenture redemption account balance of £8,150. Liabilities to creditors, although small at £1,720, are greatly in excess of sundry debtors, but the company has £24,968 in cash, of which £23,000 is on deposit.

St. Pauli Breweries Co., Limited.

The improvement in the business of this Bremen brewery in 1904-5 was well maintained during the year ended September 30, and sales increased by another 4,412 hectolitres to 77,512 hectolitres. Trading profits consequently rose by £2,783 to £20,601, and after providing for interest and London office expenses the nett profits, including £76 brought forward, were £2,682 larger at £15,894. Of this £5,747 or £1,927 more is written off for depreciation and £500 is put to reserve against nothing a year ago, and the ordinary shares again get 3 per cent. and £347 is carried forward. Another £2,585 of the mortgage bonds were repaid, leaving £80,146 outstanding, but loans on mortgages and from bankers have gone up by £5,317 to £23,024, owing to the further capital expenditure. This amounted during the year to £12,945, and after deducting the allowance for depreciation and £1,222 received for properties sold the property account shows an increase of £5,976 at £237,143. Trading balances are well in favour of the company, liabilities to creditors and on bills payable having been reduced by £1,155 to £15,395, while stocks are £3,340 up at £39,294, and debtors and loans receivable have risen by £5,304 to £50,329. Cash, however, is down from £16,906 to £3,308.

Palace and Derby Castle, Limited.

This company owns certain properties and pleasure resorts in Douglas, Isle of Man, and seems to make a fairly good thing out of the business. Receipts in the year to October 31 were £31,548, and the expenditure came to £19,256, no details given, leaving the balance of profit at £12,292. This is raised to £13,160 by the balance of £630 brought forward and sundry other items, from which £3,440 is required for debenture interest and trustees' fees, £286 for bank interest and commission, and £600 for directors' remuneration. Another £1,100 is written off furniture, machinery, &c., for depreciation, and £500 off the additions and alterations at the Palace Opera House, the nett credit still remaining being £7,234. Preference dividend at 5 per cent. requires £3,000, and a similar distribution on the ordinary shares takes £3,500, so that £734 is left to be carried forward. The creation of reserve funds is apparently a sort of mystic science in the Isle of Man, or, at any rate, the thought of such a thing does not seem to have entered the heads of this company's directors, although its property account stands at the substantial amount of fully £215,000. The cash balance is not very grand at £2,094, including £1,056 standing to debenture trustees account, but the concern has practically no floating debts, and no doubt manages to get along pretty well.

Queen's Hotel, Manchester, Limited.

This company does not favour its shareholders with a profit and loss account, possibly because the directors think the revenue earned is not sufficient to justify its preparation. Business in the twelve months to September 30 seems to have been better than in the previous two years, but the former results must have been dismal indeed, as even now the profit, after charging all working expenses and depreciation, amounts to only £5,032. From this £3,750 is required for debenture interest, and £450 goes for directors' fees, which must be paid whatever happens, leaving £832 to be carried forward. Since the date of the accounts business is said to have shown a further increase, and the directors hope that a more prosperous time is in store for the company. Their desire in this direction will not be more fervent than that of the shareholders, who do not seem to have had any dividend since 1902. Nothing can be paid even on the preference shares, and business will have to be good indeed to bring the ordinary shares back into the dividend list, because some attention must presently be paid to the company's finances. Including goodwill, stamps, and cost of conveyance, amounting to £7,811 between them, the hotel building with the plant has a balance-sheet value of £166,240, various improvements have cost an additional £4,069, and furniture, fittings, fixtures, &c., after providing depreciation, are entered at £8,612, or a total capital outlay of £178,922, against which the reserve fund is just £318. Sundry creditors amount to £3,260 against only £991 to come in from debtors, but stocks on hand are worth £11,213, and the cash balance with all payments met appears at £8,612.

Lagunas Syndicate, Limited.

This nitrate company has never been a very substantial enterprise, and the important improvement in profits reported a year ago turns out to have been purely transitory. It is very unusual in these days to find an undertaking of this sort with a reduced profit, but for the twelve months ended June 30 the revenue was only £89,048 compared with £115,468 in the previous year. This seems to be the smallest income earned for about five years, and shareholders will look forward to the chairman's explanation at the forthcoming annual meeting with no little anxiety. It is said in the Stock Exchange that by holding for top prices the company missed its market. After providing London expenses, income-tax, and loss on exchange the nett balance is £73,581, and as £3,865 was brought forward the total for division is £77,446. This goes against £101,865 for 1904-5 after adding £3,000 to the reserve fund, and in place of £32,000 then set aside for debenture redemption and purchase of new grounds the amount now to be allocated is only £15,000 for the final redemption of debenture bonds. The dividend is then reduced from 6 per cent. to 5½, and the sum carried forward is nearly £2,000 lower at £1,946. Happily the entire debenture debt of £150,000 has now been redeemed and the new grounds recently purchased from the Chilian Government have been completely paid for. With £5,958 added during the year to the machinery and plant, the property account has a balance-sheet value of £1,101,418, against which the reserve is £55,000, apart from a fire insurance fund of £5,000. Floating liabilities are about balanced by the sum due from debtors and on bills payable, and although stocks are fairly important at £61,761 the cash balance is poor at £7,138.

New Tamarugal Nitrate Co., Limited (and Reduced).

Although the new maquina at La Palma is not yet at work, the results obtained during the twelve months ended July 31 showed very material improvement. The gross revenue amounted to £60,771 compared with £43,171 and £35,792 in the two preceding years, and after meeting London office expenses, income-tax, &c., and writing off £2,100 for expenses of issuing the second debentures the nett profits were £14,265 up at £54,288. Of this the usual debenture service took £23,400 and interest on the second debentures £1,943, leaving a balance of £28,945, out of which the full interest is paid on the income bonds, and a dividend at the rate of 8 per cent. per annum is recommended for payment on January 21, when the unification of the share capital will have been completed. During the year £77,460 debentures were redeemed, and this sum has been written off property account together with the balance of £12,972 brought forward on revenue account, reducing that item

to £389,833, while the new maquina account stands at £66,892. Sundry creditors are about £1,000 down at £17,928 against which there was £5,429 to come in from sundry debtors, including £4,097 for profit on nitrate sold but not delivered on July 31, and in addition to stocks and stores valued at £31,838 the company held £20,000 in bills receivable and £14,296 in cash. The petition for reduction of capital was granted by the Court last month, and in order to carry out the proposed unification the directors state that it will be necessary to subdivide the 8s. shares into 4s. shares, which will be consolidated into shares of £1 each.

Slaters, Limited.

The reduction in the dividend paid by this well-known catering company from 16 per cent. to 12½ caused shareholders to assemble in considerable force at the meeting held on Friday of last week, and the new chairman, who replaced the late Mr. John Crowle, was subjected to a good deal of heckling, particularly from the lady proprietors. Competition in this class of enterprise is evidently growing more severe than ever, and the company brings out its trading and other profits at £52,021 apart from interest and dividends £4,514 and transfer fees £176, making with £5,257 brought forward a total credit of £61,968. General expenses, leases, reserve and interest thereon, depreciation, and debenture interest absorb £19,508, leaving £42,460 as the nett profit. Interim dividends already paid require £16,387, and after providing the balance of the preference dividend the directors bring up the ordinary dividend to 12½ per cent. and carry forward the increased sum of £6,479. The extensive premises in Baltic House which were acquired and adapted as a restaurant are said to form a valuable addition to the company's property, and four new businesses opened during the year are described as working satisfactorily. The total balance-sheet valuation of the properties is now £506,221 and the total reserves are pretty substantial at £124,435. These, however, are entirely involved in the business, the investments of £91,060 being in kindred concerns, and the company's supply of liquid assets is therefore not very generous. The rather important sum of £40,960 is owing to sundry creditors against debtors of only £28,727 and sundry loans and interest £5,954. Stock at various branches does not look very important at £9,088, and in order to show a cash balance of £17,345 it has been necessary to borrow £10,502 on loan.

Sharpness New Docks and Gloucester and Birmingham Navigation Company.

In their report for the half-year ended September 25 the directors of this enterprise announce the conclusion of an agreement with the Severn and Canal Carrying Company, under which the latter agrees to employ the Sharpness Company to tow all its vessels on the Sharpness canals and on the River Severn between Gloucester and Stourport. They have purchased the five tugs of the Carrying company, and have every reason to believe that the new venture will prove advantageous to this concern and to traders generally. Grain imports during the period under review show a decrease of 4,342 tons, but timber imports went up by 8,283 tons and sundries by 1,309 tons, and the tonnage receipts of £41,120 were larger by £615. Rents were rather lower at £6,182, and the sum brought forward was £107 only against £1,673. A special credit of £500 last year is also absent on the present occasion, and from all sources the income is £47,735 against £49,301. Some trifling economies were effected in management expenses, but the principal reason for a saving of over £1,000 in this item was a drop in the law charges of £1,170. Maintenance, however, was on a rather heavier scale, water, rates, &c., and dredging all costing more, so that the aggregate outlay under the two heads was £15,343 compared with £16,096. After meeting the debenture interest of £12,121, and providing for other smaller charges, including rents £1,857, the directors place £2,500 to works and contingency reserve, leaving £15,676 as the nett credit. Last year this reserve received only £1,500, but the tug insurance fund got £259, and £641 was allowed for Worcester wharf improvement, the nett credit then being £16,563. Out of the sum now available the directors recommend the payment of the half-year's dividend on the "A" preference stock and the full year's dividend on the "B" and "C" preference stocks, leaving £2,150. To that it is proposed to add £887 from the revenue reserve and to pay a dividend of 1 per cent. on the ordinary consolidated stock.

William Paton, Limited.

This company makes bootlaces, an indispensable article for all of us, and the business is therefore a fairly profitable one. After deducting all ordinary working expenses and making provision for bad and doubtful debts, the profit for the year ended September 30 was £8,795. To this must be added £55 for rents and transfer fees, making £8,850, while £1,294 is deducted for management salaries, directors' fees, bonus to employees, and income-tax. This leaves the nett profit at £7,557, and as £3,287 was brought forward the disposable sum is £10,844. Preference dividend requires £2,250, 5 per cent. is paid on the preferred ordinary shares, and a similar dividend on the ordinary shares. The special reserve fund is then increased by £1,000 to £5,000, and nearly £1,000 is added to the balance carried forward, making it £4,244. The addition to depreciation and maintenance fund before the profits were brought out was £2,000, against which £734 was spent on maintenance for the year, leaving the fund at £7,754, so that with the special reserve the accumulations are about £13,250 against the land, buildings, machinery and goodwill, &c., of £10,567. Creditors appear at £14,477, but debtors' and agents' balances are £24,032, stocks are valued at £41,244, and cash and bills reach £2,707.

Digalla Ceylon Tea Estate Co., Limited.

This little company increased its crop for the year ended June 30 by another 43,193 lbs. to 334,546 lbs., making the yield per acre 557 lbs., and on this it secured practically the same price as in the previous season at 5.71d. per lb. Gross revenue consequently rose by £934 to £7,111, but expenses were heavier, and with £296 or £77 less brought in the nett revenue was only £458 larger at £1,790. Preference dividend took £342 of this, and once more the directors elect to pay no dividend on the ordinary shares, which represent £15,000 out of the paid-up capital of £21,000, preferring to increase the allowance for depreciation from £700 to £1,000 and to raise the carry forward to £454. Apparently the reason for this decision is to be found in the efforts to increase the resources of the company by rubber growing, as 10,550 Para rubber trees were planted in the tea and 22 acres of jungle cleared and planted during the twelve months, so that the company now has 50,550 trees in the tea and about 70,000 on the land cleared. After allowing for the depreciation now provided the estates stand at £22,368 or £327 less, and as there are no reserves of any kind the company has to rely to a comparatively large extent on credit. The loan obtained has, it is true, been further reduced, and now amounts to £400 only, but sundry creditors and bills payable are heavy enough at £3,854, especially as produce in hand is only valued at £1,489, while sundry debtors owe no more than £91 and cash in hand comes to £452. Advances to coolies are a trifle higher than they were a year ago at £1,308.

British and Benington's Tea Trading Association, Limited.

The tide of fortune seems now to have turned in favour of this association, and with a considerably increased volume of business trading profits for the year ended September 30 were £2,812 higher at £13,717. Interest, transfer fees, &c., at the same time gave £244 more at £577, but management expenses were £408 heavier at £4,906 and with a smaller balance of £148 brought in the nett profits came to £9,536 against £7,023 a year ago. The directors have at length recognised the necessity of increasing their reserve by something more substantial than the interest on the amount, and after paying preference dividend and giving the ordinary shares 6 per cent. against £4 3s. 4d per cent., they transfer £1,000 to reserve, and carry forward £4,286. This will bring the fund up to £20,561 against goodwill, trade marks and names valued at £89,614, so that a good deal remains to be done before the reserve reaches a figure which can be considered in any way adequate. Of the total £13,450 has been utilised to buy 330 of the company's own £5 preference and 11,800 of the £1 ordinary shares, while £5,900 is invested in railway stocks specifically earmarked, and in addition £3,228 is held in sundry Home Railway stocks. Liabilities to sundry creditors have risen by £1,611 to £7,223 against which sundry debtors are £2,014 down at £28,537, but stocks show an increase of £1,598 at £13,204, and cash and bills are £3,912 up at £6,237.

Natal Estates, Limited.

This small company did not do so well in the year to May 31 as in the previous twelve months, due partly to a lessened output, but principally to a decline in the price of sugar. The income from all sources was £72,149, and after providing expenditure of every kind, including directors' fees, depreciation and loss on realisation of Natal 3 per cents., the balance of profit is £3,744. Managing director's commission takes £212, but £4,001 was brought forward, so that the credit for disposal is £7,532. From this the directors propose to pay a dividend of 8 per cent., absorbing £6,000, or about £2,500 more than was earned, carrying forward £1,532. According to latest advices the present prospects of the company are favourable, but we do not know whether that excuses the action of the directors in making such a large distribution on the capital. The reserve fund is only £15,000 against a capital expenditure of over £140,000, and although debtors are in excess of creditors and stores on hand are valued at £21,273, it has been necessary to borrow £6,321 from bankers. Even then the cash balance is only £44.

MINING RETURNS.

Abosso.—Crushed 3,384 tons, 1,911 ozs.; cyanide 2,722 tons, tailing 797 ozs.; total, 2,708 ozs.

Angelo.—25,250 tons milled, 8,060 ozs.; sands 15,274 tons, 2,763 ozs.; slimes 9,653 tons, 1,061 ozs.: total, 11,889 ozs.

Ashanti Goldfields.—Obuasi: Crushed 3,182 tons, 3,450 ozs; this includes 395 ozs. recovered by the No. 1 cyanide. Accumulated tailings at Ayeinm—130 ozs. recovered by cyanide plant; total, 3,580 ozs.

Associated Northern Blocks.—Milled 3,542 tons ore; treated 449 tons slimes; yield, £15,400.

Associated of Western Australia.—Milled 9,072 tons of ore; treated 4,002 tons slimes: yield, £19,319.

Balaghat.—4,550 tons, 3,612 ozs.; 4,004 tons tailings (cyanide) 351 ozs.; total, 3,963 ozs.

Barrett.—372 ozs.; value £1,500.

Bonanza.—Crushed 3,500 tons, 1,364 ozs.; cyanide and slimes 3,621 tons, 1,079 ozs.; total, 2,443 ozs.

Brilliant Block.—Crushed 607 tons, 246 ozs.; cyanide £2,700 concentrates £120.

Briseis Tin.—Shipped 27 tons, including 12 tons on account of New Bros Home No. 1.

British Broken Hill Proprietary.—1,932 tons crude ore produced 316 tons concentrates, containing 202 tons lead and 8,532 ozs silver.

Broken Hill Proprietary.—Refinery produces—Fine silver 408,730 ozs; soft lead 5,055 tons.

Broomassie.—Crushed 1,150 tons, 1,185 ozs bullion on the plates, six tons concentrates of an assay value of £14 9s per ton.

Burbank's Birthday.—Crushed 1,430 tons, 1,258 ozs.

Carrington's United.—Crushed 185 tons for £620; concentrates £160.

Cason.—Milled 36,500 tons, 10,902 ozs.; sands 22,782 tons, 4,680 ozs.; slimes 13,654 tons, 2,678 ozs.; total, 18,260 ozs.

Champion Reef.—15,100 tons, 9,304 ozs.; 20,192 tons tailings (cyanide), 1,937 ozs.; total, 11,241 ozs.

Chinese Engineering.—Output of coal, 22,500 tons; sales, 21,000 tons; consumption, 1,550 tons.

Coromandel.—1,070 tons, 342 ozs.; tailings 1,200 tons, 76 ozs.; total, 418 ozs.

Crown Deep —Crushed 29,500 tons, 8,110 ozs.; sands by cyanide 20,400 tons, 2,931 ozs.; slimes 9,318 tons, 815 ozs.; total, 11,856 ozs.

Croydon Consols.—Clarke's Brilliant, 101 tons for £500 ex residues.

Driefontein Consolidated.—Milled 21,000 tons, 4,634 ozs.; sands, 15,636 tons, 2,052 ozs.; slimes 5,022 tons, 482 ozs.; total, 7,168 ozs.

Durban Navigation Collieries.—Output 15,700 tons; sales 19,500 tons.

Durban Roodepoort Deep.—Crushed 11,230 tons, 3,090 ozs.; sands by cyanide 7,602 tons, 863 ozs.; slimes 4,049 tons, 255 ozs.; total, 4,208 ozs.

Ferreira Deep.—Crushed 22,199 tons, 9,492 ozs.; sands by cyanide 16,800 tons, 3,109 ozs.; slimes, 6,400 tons, 559 ozs; total, 13,160 ozs.

Geldenhuis Deep.—Crushed 27,100 tons, 6,630 ozs.; sands by cyanide 17,550 tons, 2,821 ozs.; slimes 8,978 tons, 558 ozs.; total, 10,009 ozs.

Glen Deep.—Crushed 19,332 tons, 4,632 ozs.; sands by cyanide 12,380 tons, 1,869 ozs.; slimes 7,078 tons, 605 ozs.; total, 7,106 ozs.

Glynn's Lydenburg.—Crushed 1,883 tons, 629 ozs.; cyanide 1,258 tons, 551 ozs.; slimes 625 tons, 304 ozs; total, 1,484 ozs.

Golden Gate.—South Glanmire, 1,344 tons, £3,236.

Golden Pole.—Crushed 1,470 tons, 691 ozs.; sands 1,450 tons, 283 ozs.; total, 954 ozs.

Great Fingall.—Ore 21,641 tons, 4,941 ozs.; tailings by cyanide 22,843 tons, 2,419 ozs.; concentrates 423 tons, 1,296 ozs.; total, 8,656 ozs.

Hutti (Nizam's).—916 ozs. from 2,100 tons crushed; tailings 264 ozs. from 2,050 tons treated; total, 1,180 ozs.

Ida H. Gold.—Crushed 1,100 tons, 698 ozs.

Jumpers Deep.—Crushed 20,730 tons, 4,797 ozs.; sands by cyanide 13,665 tons, 1,756 ozs.; slimes 6,910 tons, 351 ozs.; total, 6,904 ozs.

Kalgurli.—10,784 short tons, 7,654 ozs.

Kelantan Dredging.—Recovered 179 ozs.

Koffyfontein.—Recovered 3,000 carats diamonds; 144,000 loads of blue ground out on floors.

Lace Diamond.—Loads of blue ground washed 33,220, yielding 3,628 carats, equal to 10·92 carats per 100 loads; loads of blue ground floored 30,305, making 959,966 loads on floors.

Lake View Consols.—11,419 tons ore, 3,353 ozs.

Lancaster West.—Crushed 6,436 tons, 1,367 ozs.; cyanide, 5,413 tons, 886 ozs.; total 2,253 ozs.

Langlaagte Deep.—Crushed 26,590 tons, 6,767 ozs.; sands by cyanide 19,921 tons, 2,292 ozs.; slimes 7,182 tons, 406 ozs.; total 9,465 ozs.

Le Roi No. 2.—Josie Mine shipped 420 tons; net receipts $495.

Lloyd Copper.—95 tons of copper.

Mills' Day Dawn United.—Treated 2,015 tons; value, including residues, £6,800.

Mount Elliott.—20 tons assaying 30·6 per cent. copper, 1·5 ozs. silver per ton, and 7·2 dwt. gold per ton, realised £458; 30 tons assaying 37·3 per cent. copper, realised £1,045; 23 tons assaying 32 per cent. copper, realised £683.

Mysore.—16,050 tons, 15,358 ozs.; 13,000 tons tailings (cyanide), 1,746 ozs.; total, 17,104 ozs.

Mysore West and Mysore-Wynaad.—500 ozs. fron 2,046 tons ore crushed; standard ounces 136; 2,486 tons cyanided.

Natal Navigation Collieries.—Output 19,054 tons.

New Ravenswood. — Crushed 1,285 tons; value, £3,417; 136 tons concentrates, £880; tailings treatment plant 89 tons concentrates produced .

New Vaal River.—Diamonds registered by the diggers from the old workings £4,000.

Nigel.—Crushed 7,640 tons, 4,151 ozs.

No. 2. South Great Eastern.—Crushed 5,210 tons for 2,428 ozs., including 752 from battery.

North Broken Hill.—Treated 2,130 tons crude ore, producing 360 tons concentrates, containing 251 tons 16 cwt. lead, and 6,192 ozs. silver.

Northern Blocks.—Great Leviathan Southern Cross.—1,100 tons, £1,480.

Nourse Mines.—Crushed 28,030 tons, 7,718 ozs.; 18,558 tons sands by cyanide, 3,819 ozs.; 9,060 tons slimes, 845 ozs.; total, 12,382 ozs.

Nundydroog.—7,100 tons, 5,655 ozs.; 7,020 tons tailings, 661 ozs.; total, 6,316 ozs.

O.K. Copper.—Treated 386 tons crude ore, producing 37 tons fine copper.

Ooregum.—10,243 tons, 4,723 ozs.; tailings, cyanide, 8,107 tons, 906 ozs.; total, 5,629 ozs.

Oroville Dredging.—Gross returns, $19,250.

Peña Copper.—14,800 tons, compared with 2,996 tons in October; about 100 tons of fine copper in precipitate were produced.

Premier (Diamond).—Washed mine ground, 404,045 loads; overburden, 71,368 loads, yielding 119,165 carats; percentage without overburden, 29.

Princess Estate.—Crushed 7,685 tons, 2,538 ozs.; cyanide, 5,435 tons, 1,210 ozs.; total, 3,748 ozs.

Queensland Copper.—Ore treated, 1,328 tons; production, 221 tons matte, containing 128 tons fine copper; shipments advised since last return, 441 tons matte.

Raub Australian.—840 ozs. from 5,230 tons ore crushed.

Rhodesia Broken Hill.—2,250 tons calcine, calamine ore shipped.

Rhodesia Matabeland Development.—Crushed 120 tons, 54 ozs.

Roberts Victor Diamonds.—5,653 loads washed, producing 3,774¼ carats, equal to 66.20 carats per 100 loads.

Roodepoort Central Deep.—Crushed 8,144 tons, 1,936 ozs.; cyanide, 5,800 tons, 1,058 ozs.; total, 2,994 ozs.

Rose Deep. —Crushed 31,150 tons, 7,139 ozs.; sand cyanide, 19,600 tons, 2,222 ozs.; slimes, 11,255 tons, 664 ozs.; total, 10,025 ozs.

Sheba.—Output 4,700 tons, 2,339 ozs.

Sons of Gwalia.—Ore crushed, 12,452 tons, 2,967 ozs.; tailings by cyanide, 7,020 tons, 881 ozs.; concentrates 218 tons, 513 ozs.; total, 4,361 ozs.

South Kalgurli.—Crushed 8,500 short tons, 2,942 ozs.

Tasmania.—Crushed 4,672 tons, 1,748 ozs.; concentrates 226 tons, 316 ozs.; cyanide 2,210 tons, 276 ozs.; total, 2,340 ozs.

Tasmanian Smelting.—Silver-lead bullion shipped 760 tons lead, 127,000 ozs. silver, 240 ozs. gold.

Tolima.—50 tons, value £3,000.

Transvaal Gold Mining Estates.—Crushed 7,982 tons, 2,355 ozs; central cyanide 3,955 tons, 1,049 ozs.; central slimes 2,465 tons, 601 ozs.; Kameel's cyanide 1,040 tons, 235 ozs.; Kameel's slimes 670 tons, 100 ozs.; old slimes 600 tons, 101 ozs.; Elandsdrift treated 307 tons, 101 ozs.; total, 4,551 ozs.

Vereeniging Estates.—Output 23,960 tons.

Victoria Proprietary.—Crushed 505 tons, 143 ozs.

Vivien.—Ore milled 2,950 tons, 556 ozs.; tailings 2,100 tons, 249 ozs.

Westralia Mount Morgans —Crushed 5,180 tons, 1,075 ozs.; cyanided 3,200 tons, 852 ozs.; slimes 1,960 tons, 405 ozs.

NEXT WEEK'S MEETINGS.

Monday, December 10.

Fraser and Chalmers.—Winchester House, noon.
Great Indian Peninsular Railway.—Salisbury House, noon.
Kent Coal Concessions.—Cannon Street Hotel, 2.30 p.m.
North White Feather Gold Mines.—Winchester House, noon.
Southern Land.—Cannon Street Hotel, 2.30 p.m.

Tuesday, December 11.

Camwal.—Frascati Restaurant, 3 p.m.
Continental Union Gas.—7, Drapers' Gardens, 2 p.m.
Isle of Thanet Electric Tramways and Lighting.—Winchester House, noon.
Indian and Colonial Gold Fields.—Winchester House, noon.
London and River Plate Bank.—River Plate House, noon.
Peninsular and Oriental Steam Navigation.—122, Leadenhall Street, 1 p.m.
St. Louis Breweries.—Winchester House, 3 p.m.
South Indian Railway.—55, Gracechurch Street, 1.30 p.m.
Transvaal Estates and Development.—Winchester House, noon.

Wednesday, December 12.

Arniston Coal.—Edinburgh, 3.30 p.m.
Amalgamated Press.—Hamilton House, 2.30 p.m.
British and Japanese Finance Corporation.—Cannon Street Hotel, noon.
Cape Copper.—Cannon Street Hotel, 3 p.m.
Champion Reef Gold Mining of India.—Cannon Street Hotel, 12.30 p.m.
Consolidated Mining and Investment Corporation.—Winchester House, 2.30 p.m.
Delagoa Bay Development Corporation.—Cannon Street Hotel, noon.
East London Railway Joint Committee.—Cannon Street Hotel, 2.30 p.m.
Grand Junction Canal.—21, Surrey-street, 2 p.m.
Hampton Plains Estate.—Salter's Hall Court, 2.30 p.m.
Imperial and General Securities.—Winchester House, 2.30 p.m.
New York Breweries.—Winchester House, 12.30 p.m.
Southern Mahratta Railway.—46, Queen Anne's Gate, S.W., noon.

Thursday, December 13.

Argentine Southern Land.—River Plate House, 1 p.m.
Argentine Transandine Railway.—Winchester House, noon.
Burma Mines Develop. and Agency.—Salisbury House, 11.30 a.m.
E. Rich and Co.—96, Bishopsgate Street, 3 p.m.
Elysée Palace Hotel.—Cannon Street Hotel, noon.
Esperanza Nitrate.—Winchester House, 2 p.m.
Goldfields of Matabeleland.—Cannon Street Hotel, noon.
Lagunas Syndicate.—Winchester House, 1 p.m.
New Tamarugal Nitrate.—Winchester House, 2 p.m.
Stretton's Derby Brewery.—50, Gresham Street, 12.30 p.m.
Tate (Henry) and Sons.—21, Mincing Lane, noon.
United Realization.—Cannon Street Hotel, 2.30 p.m.
United States Debenture Corp.—Winchester House, noon.

Friday, December 14.

Anglo-Continental Gold Syndicate (1899).—Winchester House, noon.
Bombay, Baroda Railway.—Cannon Street Hotel, 1 p.m.
Chicago Breweries.—Worcester House, 11.30 a.m.
Enterprise Gold Mining and Estates.—Salisbury House, noon.
Henderson's Transvaal Estates.—Cannon Street Hotel, 2 p.m.
Khedivial Mail Steamship.—Winchester House, noon.
North British Australasian.—Winchester House, 1.30 p.m.
Paraguay Central Railway.—New Broad Street House, 1 p.m.
Santa Fé Land.—Salisbury House, 11 a.m.

COMPANY MEETINGS.

KAFFIRS CONSOLIDATED INVESTMENT AND LAND COMPANY.

The eleventh ordinary general meeting of the Kaffirs Consolidated Investment and Land Company, Limited, was held on Tuesday at the Cannon Street Hotel, E.C., Mr. Robert Warner, the chairman and managing director of the company, presiding.

The Secretary having read the notice convening the meeting,

The Chairman said: We have now to present to you our report for the year ended September 30, 1906, and I may mention that I have had letters from shareholders expressing satisfaction with that report and, I am pleased to say, not a single murmur of dissent. We are able to show, as the result of the past year, a fair profit; not so much as we should have liked, but, considering that during the year South Africa has been under such a terrible cloud and that there has been, as everyone must be aware, a very acute commercial depression in almost the whole of South Africa, we have no reason to be dissatisfied. The principal points in which Rhodesia has made progress have been in an increase of the gold output, in a very large development of the copper industry, in railway construction and in mining generally, especially the small mining properties which have been so much fostered by the authorities in the colony. During the current year we certainly look forward to very much greater progress, as there are so many things "in the air." First of all, the Zambesi Falls are to be utilised and will provide an immense water power, sufficient, I am told, to drive the mills of all the Rand and the Rhodesian companies; and we have next the construction of the railway, which is going ahead very rapidly. We have a gradually increasing population, and we have also a scheme promoted by the principal land owners for land colonisation. With regard to our own particular properties. First, we have the Tobacco Plantations, Limited, in which we have such a large interest, and that certainly has been developed very much during the past year; we have every hope of some satisfactory results at an early date. In tobacco growth it is rather difficult to prophesy as to when you are coming to a dividend-paying point; but we are increasing the acreage under cultivation, and producing a very good article. We have had an important recognition of the value of our produce by receiving three gold medals at the recent show at Salisbury. We have explained in the report that during the past year we have transferred our banket claims to a company called the Banket Consolidated Company, Limited, but we continue to hold a very large number of shares in that undertaking, and look forward to a handsome return from that source. You are also aware that, some time ago, we became interested in a large property of 16,000 acres just outside Delagoa Bay. We have been informed within the past three or four months, in regard to the new railway from Delagoa Bay, which is eventually to go to Johannesburg, that the land has been partially laid out right up to the Portuguese frontier, and of course it will be the business of the Transvaal Government to complete the line on to Johannesburg. I have no information as to the progress made on that particular section of the line, but we have the satisfaction of knowing that it must come straight through our land, and must consequently be of great importance to us. Speaking of Delagoa Bay, I may mention that we are now in negotiation with some large coalowners whose property is very near ours; we have good reason to think that coal is to be found in fair quantities on our own property, and we are now in communication with other owners with a view to some kind of joint work which will save expense in the matter of sinking and boring, which is rather a costly operation. In the report we also mention to you that we have been approached with a view to co-operating in a very large land settlement scheme to the north of Johannesburg. That is a very big thing, but such negotiations take considerable time, and at the present moment I hope you will excuse me from saying anything more on the subject. I now beg to move the adoption of the report and accounts as presented.

Mr A. Oxley seconded the motion, which was unanimously agreed to without discussion.

Mr Loveridge moved the reappointment of Mr Robert Warner as a director, and this was seconded by Mr. Hanson and agreed to.

A vote of thanks to the chairman closed the meeting.

DIVIDENDS ANNOUNCED.

RAILWAYS.

Assam Railways and Trading.—On the preferred "A" shares of 6s. per share on account of arrears on the pre-preference shares at the rate of 8 per cent. per annum for half-year ending Dec. 31, and on the new 6 per cent. shares at 6 per cent. per annum for half-year ending Dec. 31.

Darjeeling Himalayan.—Dividend for half-year ended June 30 at the rate of 16 per cent. per annum was paid on July 30, carrying Rs. 1,67,652 forward.

New York Central and Hudson River.—1½ per cent. for quarter, payable Jan. 15.

INSURANCE.

Imperial Accident, Live Stock, and General.—Interim at the rate of 7½ per cent. per annum for half-year ended June 30.

Norwich and London Accident.—Further of 14s. per share, making 20s. per share.

Royal.—Interim for 1906 of 20s. per share.

Sun Insurance.—Interim of 5s. per share.

BREWERIES.

Bartholomay of Rochester.—9s. per share on the preference shares, or 4½ per cent.

Chicago.—At the rate of 5½ per cent. for the year ended Nov. 30, placing £16,000 to reserve, and carrying forward £4,574.

Royal Brentford.—Interim for six months ending Dec. 31, at the rate of 8 per cent. per annum on the ordinary shares.

United States.—Interim of 5s. per share on the preference shares for six months ended September 30, payable Jan. 1.

MINES.

Mills Day Dawn United.—1s. per share and a bonus of 1s., making 2s. per share, payable 21st inst.

No. 2 South Great Eastern.—(No. 99) of 6d. per share.

Scottish Gympie.—Quarterly of 7½d. per share.

Societe Anonyme des Mines at Fonderies de Pontgibaud.—17.50f. (equal to 13s. 4d. per share).

Sulphide.—10 per cent. on the preference shares, payable Dec. 21, for year ended June 30.

Tomboy Gold.—2s. 6d. per share.

MISCELLANEOUS.

American English and General Trust.—Interim at the rate of 4 per cent. per annum for half-year ending Jan. 1, 1907.

Aux Classes Laborieuses.—Interim of 4 per cent. payable Dec. 15.

Calgary and Edmonton Land.—Interim for 1906 of 2s. 6d. per share, payable 17th inst.

Doonars Tea.—Interim of 5s. per share on account of 1906.

Empire of India and Ceylon Tea.—Interim of 5s. per share on account of 1906.

Forestal Land Timber and Railways.—Interim at the rate of 6 per cent. per annum to Dec. 31 on the preference shares.

Jokai (Assam) Tea.—Interim of 2½ per cent. on the ordinary shares.

Leadhills Company.—Interim for six months ending Dec. of 3s. a share.

London Woollen.—For past half-year on the ordinary shares at the rate of 5 per cent. per annum, making 8 per cent. for the year.

South American Land Company.—Further of 4 per cent., making 8 per cent. for the year, carrying £1,322 forward.

The Mint, Birmingham.—Interim at the rate of 7½ per cent per annum for six months ended Sept. 30.

Transvaal Coal Trust.—1s. per share.

Vallombrosa Rubber.—Interim of 3s. per share for the half-year ended September 30, being at the rate of 30 per cent. per annum.

We are informed by the secretary of the Pekin Syndicate that the directors have received a telegram from the expert and the chief mining engineer in Honan stating that No. 1 shaft has been sunk to a depth of 630 ft. So far as proved, the coal is very unsatisfactory, friable, and unsuitable for working. The seam dips at an angle of 42 degrees at this point. The engineers strongly advise continuing to sink No. 1 shaft to a depth of 750 ft. and to drive a tunnel in a north-westerly direction from the bottom of the shaft so as to intersect the seam at a lower level. This would enable the quality of the coal to be proved over a large area. In the opinion of the directors, there have been great local disturbances of the strata in the vicinity of the shafts, which probably accounts for the friability of the coal, and they are in consultation with the engineers as to the best means of determining how far the disturbance extends.

THE NEWNES' MAGAZINES.—A new departure in illustrations is made in the Christmas *Strand* with the reproduction of numerous paintings in colour which the proprietors claim with truth to be excellent. As for the rest of the contents, "Sir Nigel" returns to home and happiness after his adventures in France, and a new serial in which a motor car plays a large part is commenced by C. N. and A. M. Williamson. A good school story of an unusual kind by Owen Oliver, and the usual yarn by W. W. Jacobs, are accompanied by a more conventionally seasonable symposium on the Best Trick for Amateur Conjurers by experts on the subject. In the *Grand* the "Bear Chaperon" goes gaily on giving sketchy impressions of Holland in a most readable fashion, while Mr. G. S. Paternoster tells us "How Fashionable Ladies Pay Their Bills," and Mr Frank Savile, in lighter vein, tells how an economical woman manufactures a boat with the assistance of "Hoggins's Household Help," and what happened afterwards. The "Best Story" is Keble Howard's "Compromising Martha," which the author describes as his most successful one. The *Sunday Strand* contains the conclusion of the serial by A. B. Cooper, as well as an article by that writer on "Thomas Faed the Painter of the Home," and Mr J. H. Yoxall, M.P., and Mr. Harold Begbie contribute stories of a true Christmassy flavour. In addition to instalments of the serials by Messrs. R. Caton Woodville and Fred Swainson, the *Captain* has amusing stories by the Rev. Dr. Malan and Mr. Stuart Wishing, and the usual interesting papers and notes on the many pursuits dear to boyhood. The *Wide World*, too, is full of experiences in all parts of the world, and while Mr. R. L. Jefferson writes of a motor trip to Constantinople, Miss Beatrice Grimshaw gives us her impressions of Far Fiji, and Mr. A. Pitcairn Knowles tells how he went through Friesland on skates. To us the most interesting article in *Fry's Magazine* is the one by Mr Horace G. Hutchinson on the Best Dog Friend. Mr James Braid continues his golfing golfing articles, and further adventures of Heronhave in South America are described by K. and Hesketh Prichard.

A Copy of the Full Prospectus has been filed with the Registrar of Joint Stock Companies.

List of Applications will CLOSE on or before MONDAY, the 10th DECEMBER, 1906, for both town and country.

THE CHESTERFIELD TUBE COMPANY, LTD.,

Incorporated under the Companies Acts, 1862 to 1900.

CAPITAL - - £175,000.

Divided into

75,000 Six per Cent. Cumulative and Participating Preference Shares of £1 each	£75,000
100,000 Ordinary Shares of £1 each	100,000

Printed for the Proprietors by ST. CLEMENTS PRESS, LIMITED, Newspaper Buildings, Portugal Street, Kingsway, London, W.C., and Published

The Investors' Review

EDITED BY A. J. WILSON AND SON.

Vol. XVIII.—No. 467. SATURDAY, DECEMBER 15, 1906. (Registered as a Newspaper.) Price 6d.
New Series.

PUBLISHER'S NOTICES.

The Investors' Review is a Subscription Journal, and will be delivered to subscribers in London by the first post, or sent to the country and abroad by the first mail, on Saturday Mornings on the following terms:—

One Year - £1 1s. Six Months - 11s. Three Months - 5s. 9d.

Short of Three months the Price is **6d.** per Copy *Inland*, and **6½d.** *Abroad, Post Free.*

Subscribers can change their address as often as they please, but notice of change must reach the Publishing Office not later than the First Post on Friday Morning.

For a fortnight before the Subscription expires the **Investors' Review** will be forwarded in a different coloured wrapper.

Cloth cases for binding the Half-Yearly Volumes price **1s. 6d.**, postage **4d.** extra. Bound Volumes **16s. 6d.**, or **17s. 3d.** post free.

Cheques and P.O. Drafts should be made payable to

CLEMENT WILSON,
"Investors' Review" Office,
Norfolk House, Norfolk Street,
London, W.C.

Investment Queries.

Questions about Public Securities will be answered each week in the **Investors' Review** on the following terms:—

For each question thus answered the charge will be **One Shilling.** Where more than One Question is put they should be numbered, and a copy kept. No Security is ever named in the Answers Printed.

Private Letters giving fuller answers can be had if desired The minimum charge for such letters is **Ten Shillings** each; but for that Three Questions will be answered. For all additions beyond three the charge will be **Half-a-Crown** per query.

Lists of Investments furnished by correspondents will be annotated, or new lists of suggested investments will be supplied on the same terms, viz.:—**10s.** for the First Three, and **2s. 6d.** for each Additional one. But no group of securities forming a trust calculated to yield a given income will be supplied or less than **One Pound.**

The charge for Wires about New Issues appearing on days that prevent timely criticism in the **Investors' Review** will also be **2s. 6d.**, plus a prepaid telegram form.

The Editors cannot undertake to return rejected communications.

Letters from correspondents must, in every case, be authenticated by the name and address of the writer.

The Editors desire it to be understood that a charge is made for the insertion of reports under the heading of Company Meetings, and they cannot accept responsibility or statements made therein.

The Investors' Review.

The Union Pacific Railroad.

Wonderful figures are exhibited by this octopus United States railroad company for the year ended June 30 last, and in some respects the glowing enthusiasm of papers like the New York *Commercial Chronicle*, which fairly prostrates itself before the figures, would seem to be warranted. Let us recite some of these figures. First of all, gross receipts from working the system was $67,282,000, including $402,000 yielded by the water lines whose income has been decreasing for the last three years, and was last fiscal year less than half the total for 1903-4. Working expenses and taxes took $36,964,000 or nearly 55 per cent. of the gross income, but if taxes amounting to $1,703,000 are deducted then the proportion is 52.41 per cent., a sufficiently low one for a comparatively raw property and half-made such as the Union Pacific still is. The free income left was $30,318,000 or nearly $10,000,000 more than that of the previous year, and in addition the company received $298,000 as interest on sundry bonds, $7,238,000 as dividends on stocks owned other than those of the Oregon Short Line and Oregon Railroad and Navigation Company, which really form part of the Union Pacific system. Then $2,288,000 is entered as "balance of interest on loans and upon accounts of other than auxiliary companies," so that the entire free revenue brought out is almost $40,646,000 against $33,959,000 in the previous year. As the company has been converting its bonded debt into stock, and thereby reducing the directly borne interest charge, which last year came to $8,871,000 against as much as $12,388,000 two years before, it follows that after meeting this interest charge there was a surplus of $31,765,000, which was about $10,980,000 more than that of the preceding year. This handsome income would have been enough to pay 15½ per cent. on the company's common stock, and as it received a first dividend amounting to $4,000,000 on its holding of Southern Pacific Railroad stock during the year, the real free revenue would have enabled the directors to pay 17½ per cent., whereas they have brought the dividend only up to what is called a "10 per cent. basis." The actual dividend on the common stock, which was 8 per cent. for the year, because the first half of the year only received 3 per cent. against 5 per cent. for the second, took $15,550,000, and the 4 per cent. paid on the preferred stock absorbed another $3,982,000. Then $4,200,000 was set aside for "betterments" over and above $2,207,000 charged directly in that style out of current expenses and credited to the reserve fund. After all this had been done the final surplus left was $8,032,000.

How much of this marvellous exhibit is genuine? A good deal of it without doubt, because the company has been reorganising its system of working the traffic and introducing economies in all directions. This is noticeable most particularly in the increase of the tons carried per car from 12.35 eight years ago to 21.54 last year, an increase of more than 70 per cent. The train load, moreover, has been increased within the same period by upwards of 80 per cent. from 278 tons to 509 tons, so that the cost of working the business has been materially curtailed in this particular direction. Nevertheless, and "betterment" spending notwithstanding, the road is still practically a single track one throughout, there being only 168 miles of second

track out of a total mileage of 5,664. To be sure there are sidings of an aggregate length of 1,684 miles, but the fact remains that the line is a single one, and a good deal of it still in second or third-class condition, as is incidentally proved by the intimation that the company is ordering new equipment to an aggregate value of $13,000,000, and by the weight of metal on the road bed. The traffic, however, is large—marvellously so, to use the New York *Chronicle's* adjective—compared to that of former years, and one would like to know how far the increased gross earnings can be due to enhanced charges for the business done. Obviously if great economies in conducting the business had been introduced the customers of the road ought to have had some of the benefit, but there is no indication of any concession of the kind, and we must never forget that this Union Pacific line, the controlling or "hub" company in the great Standard Oil monopoly network of railways governed by Mr. E. H. Harriman, extends altogether to something like 30,000 miles, for the Union Pacific Company not only controls such concerns as the Oregon Railroad and Navigation and the Oregon Short Line, but the Chicago and Alton and the Southern Pacific, in addition to which it holds enormous interests in the Great Northern and the Northern Pacific. Since its year closed, moreover, it is said to have bought $40,000,000 nominal of Baltimore and Ohio stock at a cost of at least $50,000,000. It has thus obtained an incalculable power to create and stimulate traffic, and to regulate fares and freights over half a continent. It absolutely rules over the social and economic well-being of a population of many millions, and its controllers are diligently occupied always in so extending the monopoly as to shut out all competition, and drive all business both through and local into their own hands. Moreover, the company is interested in a number of industrial enterprises besides the steamship one. It and its subsidiaries hold $2,400,000 in the Pacific Express Company's stock, all the capital of $5,000,000 issued by the Union Pacific Coal Company, and so on. Its total ownings of the stocks of subsidiary properties amounted on June 30 last to almost $169,000,000, and of this total no less than $110,299,000 was then in pawn. The whole of the Southern Pacific Company common and preferred stock held for the Union Pacific by the Oregon Short Line Company, viz., $90,000,000 common and $18,000,000 preferred stock, is pledged.

Thus the wealth exhibited in the report is not altogether as it seems. Control of the great aggregate of mileage thus grasped at by the Standard Oil people is secured mainly by the abuse of credit, and in spite of the magnificent results exhibited by the Union Pacific Company for the year ended June 30 last, and of the fact that at that date it was lending $34,710,000 or nearly £7,000,000 upon Wall Street—contangoing inflated stocks to that amount in other words—it is in urgent need of large amounts of money. This money, moreover, is not to be spent in improving the existing system, in doubling the main lines so as to make them better fitted for the undoubtedly growing traffic, but new construction is aimed at and the acquisition of further properties. It is "buy, buy," "build, build," always with the aim of increasing the steely grip of a dangerous and soulless monopoly. No wonder that the company has been cited before the United States Courts for its grasping policy of law defiance, or that it has incurred the bitter hatred of the people it professes to serve and really in some senses skins alive. The funds, as we have more than once pointed out, lent by the company upon Wall Street to help the gamblers there represent money borrowed, securities pledged or sold, and if any real credit upset takes place in the United States, as may be counted upon as probable at no distant date, the finances of this overgrown and over-"merged" corporation would soon assume a very different aspect from what they seem to be in the board's report. Its surplus now flaunted before the eyes of the public would disappear, and in place thereof we should probably have a deficit of immeasurable magnitude. One never knows, moreover, when dealing with figures such as this and other American railroad companies exhibit, how much of the traffic is created by the finance of absorption and control. Does all the material carried for the various extensions or by one dependent company for another, or by the controlling company for its subsidiaries, figure in the gross receipts at the ordinary rates? In other words, is the expenditure of capital made to swell out the gross income of all the companies to an extent which would produce disaster were this support to be withdrawn? We shall not be able to answer questions of this description until the liquidation for which Wall Street is playing with the utmost recklessness actually takes place.

One minor observation and we shall leave this subject for the present. The total length of Union Pacific line open on June 30 last was 5,599 miles, and of that great stretch not a single yard was laid with rails of as much as 96 lbs. weight per yard. There were only 232½ miles laid with 90-lb. rails, but 1,656 miles were laid with 80-lb. rails, 404 miles with 75-lb. rails and 1,253 miles with 70-lb. rails. It is impossible to work heavy traffic and enormously weighty locomotives with economy over a road-bed thus furnished. The waste and the danger of accident must be stupendous. And this is the outcome of liberal current expenditure, as well as of large sums drawn from revenue in relief of capital to be applied in paying for improvements, as the Yankee financial Press would have us believe. We do not believe; we doubt. "Betterment" must be cant and humbug if this is all the board has to show for the money, a mere trick of bookkeeping to disguise the really excessive and yet inadequate ratio of expenses to income.

An American criticism on this company's methods of finance is quoted in yesterday's *Financial Times*, and is of so instructive a character that we make room for it here:—

> Without authority from shareholders and with borrowed money this Corporation bought Northern Pacific stock. In course of time this became Northern Securities stock. The company placed the collateral under an Oregon Short Line bond, sold them to shareholders and others and reimbursed the Union Pacific treasury for unauthorised borrowing of money. Later on the Government stepped in and the Northern Securities stock became again Great Northern stock and Northern Pacific stock. As I recall it, there was some substitution of collateral under the Oregon Short Line bonds, and the disentangled securities, Great Northern and Northern Pacific, became a "free asset" in the Union Pacific treasury.
>
> Now it turns out that some of these "free assets" have been sold at highly profitable figures. By that operation the Union Pacific is fortified and makes a great showing of cash and demand loans in its report. What, then, is the result of the Northern Pacific purchase by the Union Pacific? Simply a successful speculative venture, an employment of the money and credit of a transportation company, without authority, in a venture which chanced to turn out favourably instead of otherwise. It is not enough to say that in paying the 10 per cent. dividend rate to shareholders the latter are receiving a return from an "investment" cleverly handled by Mr. Harriman.
>
> Ahead of their stock, if I am right, has been placed a bond as a result of the Northern Pacific purchase. The shareholder's equity is diminished to the extent of the issue.

Economic and Financial Notes and Correspondence.

Our Foreign Trade in November.

We are not going to boast too much about the figures. They are satisfactory beyond question, but it is just possible we may be pushing business too fast for the immediate strength of our customers or for our own. Be this as it may, imports last month at £55,748,368 showed an increase of £2,601,934, or 4.9 per cent., and the increase in the exports of British and Irish produce was £3,367,013, or 11.3 per cent., bringing the total for the month up to £32,975,162. The re-shipments of foreign and colonial merchandise also rose by £659,364, or 9.8 per cent., to £7,352,332. These figures, moreover, harmonise fairly well with the aggregate increase for the 11 months now expired of the current year. Imports indeed fell off in ratio, as the total increase for the longer period was 8 per cent. Exports were also rather below the aggregate average, since for the eleven months the increase therein was up-

wards of 14 per cent., but the export trade in foreign and colonial merchandise showed practically the same increase last month as for the eleven months, or 9.8 per cent. as against 9.5 per cent. As the abstract tables appended show, on the volume of our entire business

VISIBLE BALANCE OF TRADE.

	November.			Inc. (+) or Dec. (−) in 1906 as compared with 1905.
	1904.	1905.	1906.	
	£	£	£	£
Imports..	53,397,009	58,578,560	62,365.076	+ 3,786,516
Exports	38,056.956	39,076,972	43,798,703	+ 4,721,731
Excess value of imports over exports	15,340,053	19,501,588	18,566,373	— 935,215

	Eleven months ended November 30.			Inc. (+) or Dec. (−) in 1906 as compared with 1905
	1904.	1905.	1906	
	£	£	£	£
Imports..	530, 29 979	560,302,429	611,519,055	+ 51,216 626
Exports..	378,635.631	412,217,115	478,939,544	+ 66,722,429
Excess value of imports over exports	160,494,348	148.085,314	132,579,511	— 15,505,803

The values of the imports represent the cost, insurance, and freight, or, when goods are consigned for sale, the latest sale value of such goods.
The values of the exports represent the cost and charges of delivering the goods on board the ship, and are known as the "free on board" values.

for the 11 months, including the movements of bullion, imports gave an increase of roundly £51,217,000, and exports of £66,722,000. It follows from this that the balance of trade in favour of this country has diminished in the current year to date by £15,506,000, compared with the same period of the previous year, and that is not in all respects a good sign. It may indicate that we are over-buying, or that we are paying a higher price than is expedient for a certain proportion of our imports, or it may mean that we are buying and selling too freely on credit and running risks we should not.

We are undoubtedly paying more for a good many articles, but happily not for cereals, all of which, except oats, are now cheaper than they were a year back. But other articles of consumption like beef, butter, cheese, and tea are dearer. And amongst raw materials there is a sensible increase in the price of raw cotton, some increase also in the cost of iron ore, &c., imported, since the decrease in the quantity brought in during last month was over 17 per cent., as against a decrease of little more than 4½ per cent. in the price. Copper, too, is enormously dearer, for a decrease of over 10 per cent. in the quantity received last month was accompanied by an increase of 14 per cent. in the price. This is one of the beneficent—shall we say?—Standard Oil manipulations, an example of business conducted upon the principle of grab all you can and never mind whose industry may be ruined. But flax has become rather cheaper than it was, and although jute has increased in price almost as much as copper, there has been no material rise in the price of wool. Tin, however, already enormously dear, appears to be still going up, a fact which should make every one desirous of an effective increase in the Cornish output. Taking the whole statistics into account, our imports are costing us more. Very few things of importance, apart from cereals, are cheaper than they were a year ago, and most things are more or less sensibly dearer. Even raw silk has increased slightly in price, and so has raw sugar, although refined sugar is cheaper.

And it is to be feared that our export business is not always yielding an increased profit, adequate to cover the increased cost of the raw materials. Unfortunately anything like a full comparison of the facts on this point cannot be reached, as we have no detailed statistics of quantity for a variety of articles like earthenware, haberdashery, hardware, and, above all, machinery and mill work. Our exports of cotton piece goods, however, show a decrease in quantity of over 5 per cent. for the month against which there was an increase of nearly 3 per cent. in the price obtained, and our exports of coal also yielded a little more money though not much, the increased quantity being under 20 per cent. against an increase in value of nearly 22 per cent. Jute yarn and piece goods, too, show increased values much beyond the increase in quantity, and fine remunerative prices still rule for linen yarn and piece goods. Better prices are also secured for woollen and worsted tissues and yarns, but on the whole the increase does not seem to us to quite balance the increased cost of raw materials. For all that the trade must be considered flourishing on the whole, and unless some financial storm overtakes the world's credit markets, we see no particular reason why any setback should be looked for at an early date. Everything, however, depends on unbroken credit and on the maintenance of peace throughout the world.

IS THIS A PRACTICABLE SUGGESTION?—No. 3.

A further selection of notes and letters upon the suggestion made by a correspondent a fortnight ago is now offered to the attention of readers. In another week, or at most by the end of the year, we hope to be able to set forth plainly how far we can go in the direction many of these correspondents indicate. It may, however, be said now that, tempting as the suggestions of many of them may look, the prospect some open up to us is one at which we stand aghast. To help the prudent and careful investor has always been our ambition and endeavour, but we instinctively recoil from the assumption of such a position as that of an investor's all-supervising Providence. It would simply be impossible to keep every subscriber in touch with his securities day by day. That he must do himself, and surely the educative influence of THE INVESTORS' REVIEW must after all be the best steady assistance any

man can expect. Every security, particulars about which reach us, is fully and faithfully dealt with there, often to an extent that overloads our columns, and the queries, letters of advice, &c., are designed to supplement the weekly overhaul and give between-times help. But it should be help asked and paid for. We shall say no more now, but must thank the many who have written to us for the kindly interest they show in The Investors' Review.

As the originator of this interesting discussion, I may be permitted to put into form what my idea would be of the proposed confidential circular.

Five guineas a year I suggest as a suitable fee, not more than the thing should be worth to an average investor, and not more than a modest edition of him should be able to afford. This sum should include subscription to the Review, in association with which it should be read and accepted. Apart from exceptional occasions when it might be desirable to send out the Circular under separate cover in advance of or subsequent to the weekly Review, it might conveniently go out to its subscribers along with their copy of the journal. A better plan might be to send out the Circular regularly every week or fortnight with the journal, and supplement it with special advice notes, duplicated and posted direct to subscribers as occasion called for, which would not be often. The Circular should be free from all superfluous verbiage—compact and direct, and therefore a small affair in point of size. Four pages at a time, the size of the Review, should suffice; but perhaps more space would be needed if anything like all the features I am now going to suggest were included in its scope.

1. *What to buy at the moment; and why.*—Certain securities come under the editors' attention which for some special reason appear at the moment good to buy for investment. Brief details are given of each security, with references for fuller information to back pages of the Review; and the reason is given why the present time seems opportune to make a purchase.

2. *What to sell that has been previously recommended.*—After a time, longer or shorter as may chance, circumstances will arise which will make it appear advisable to dispose of an investment recommended in some earlier issue. These circumstances will be stated briefly, leaving the reader, as in the case of recommendations to buy, to use his judgment in acting upon them or not.

3. *Model Trusts.*—From time to time, trusts in different markets may be formulated, much in the same form as in past Review numbers, but with more extended and less reserved notes.

4. *An imaginary investment account.*—This, whilst not an essential feature, I am rather sweet on as one that should be acceptable and valuable. Five, ten, fifteen, as many thousand pounds as you like, are assumed as capital in charge of the editors for investment, so as to bring in a stated average return (5 per cent., let us say); and is divided into three portions—one to go into securities of the trustee type (not confined, however, to actual trustee stocks); another into sound medium stuff on a 5 per cent. basis, or thereabouts; and the third lot into more speculative things like the best of the mines and certain industrials, with a moderately high yield. Thus each main class of investment, as distinguished from mere speculation, without regard for income return, is represented. A list is given of the securities selected at the outset, with their yields and the prices paid; and a sort of diary is thereafter kept of changes effected from time to time, or in contemplation. The expert handles this imaginary capital as if it is his own, and he is doing his best for himself, but he takes the subscribers freely into confidence and lets them know just what he is doing or thinks of doing, all the time, so that, if so minded, they may go and do likewise on their own account. Quarterly or half-yearly he "takes stock" at current market prices, and gives a profit and loss account, showing dividend income, and improvement (or depreciation) in capital.

5. *Tabulated list of best securities.*—This list is somewhat similar to the lists published in many financial organs, but difficult in these important respects. It neither necessarily includes active and popular things, nor (provided there is a reasonably open market in them) excludes investments that are seldom or never mentioned. Its purpose is to give, irrespective of fashion or favour, just those investments which the Editors consider on all-round grounds to be the cream of their respective classes. This list will be strictly limited in the number of its items, but may occupy at any rate a page. It includes everything recommended from time to time in sections 1 and 3, so that subscribers who have made purchases on those recommendations will be able to follow the market movements of their holdings. Two important columns in this list, in addition to current prices and yields, and highest and lowests, are (a) *good to buy at or under*, and (b) *good to sell at or over*. These two columns (which need not be filled except where the compilers feel pretty sure of their ground) will save a lot of unnecessary questioning, enabling subscribers to act for themselves when the hour is ripe, and ought to give the list a very exceptional value.

6. *Answers to subscribers.* Answers to questions are free in the circular; and contain sufficient information to be interesting to all. A coupon may also appear in each circular entitling the subscriber to one free answer by post during the week current, with discretion to the Editors to print the reply in the circular if worth while.

That's about all. It's as much as I think the Editors might do if assured of at least 200 subscribers, or an initial minimum gross income of £1,000. They, of course, may consider they ought to see more as a minimum; and I am quite sure they deserve very much more.

As to the supervision of private investment lists, it seems a pity that the discussion has been complicated by the importation of this question. If undertaken at all, that should be a matter for private arrangement, or might form part of a larger scheme; but for all practicable purposes it seems to me the circular itself, on lines like these I have detailed, would amply take the place of private supervision, as presumably, even if oversight was undertaken, not more or different would be done than recommended in the circular, whose guidance the investor could, of course, follow for himself.

H. T.

Bromley, Kent.

That your touchstone might be more applied with advantage to your clients admits surely of no doubt. How it may be so without engendering abuse is important and not easy.

A half-yearly or quarterly revision of one's list of investments by you would be of great value, and the fee might be so much each investment, with a percentage added for amounts over, say, £500. You note capital not represented by living assets, inventions carried as assets when superseded, revenue expenditure charged to capital, excessive stock and excessive credit which often implies old credit really irrecoverable, want of skill or energy in management, and signs of doubtful integrity, &c., &c. A firm advice to sell even at a sacrifice has saved some of us ruinous loss. This must be a personal matter.

What more can be done in the Review to aid investors and enhance the value of that organ is more difficult. Naming companies in answers is fraught with abuse. Would an open letter in reply to suppositious inquirers be useful? At present one asks what should I buy? If I want a motor company, a rubber company, an electric manufacturing company, or a nitrate company, which of each is the most hopeful to buy?

As with private traders, the experienced man finds no difficulty with two groups safe and dangerous—those that fall out of both these are most difficult to report on justly; so no doubt with companies with which you are mainly concerned.

For guidance in the past, many thanks,

J. B. G.

Laurencekirk.

I should be glad to subscribe to the scheme now under consideration in your issues of the 1st and 8th inst., if the rates are within my means. "N. E.'s" proposal that you should limit your list to the first 200 applying seems to me absurd; why a fixed number such as 200, except as a minimum? His proposal is for a maximum of that number.

J. A. L.

Weston-super-Mare.

In reference to your note in the current number of The Investors' Review, "Is this a practicable suggestion?" I think your correspondent makes a very sensible suggestion, and I should be pleased to join your special clients for the supervision of my investments. Fees, of course, would vary according to the number of securities dealt with.

Years ago you advised me to buy £150 worth of Willans and Robinson, Limited, preference shares. As the company issued more and more shares I naturally took up my allotment, being cheaper than market price. I can see now I should have reduced my holding, which, no doubt, you would have advised.

Your correspondent's idea would have been very helpful in a case like I have just quoted.

J. S.

Camberwell.

Although I have hitherto been only an occasional reader of your Review, whose special features I have always much appreciated, it may not be out of place for me to say a few words in reference to the subject raised on page 672 of the current issue.

The plan of sending out periodical circular letters to subscribers seems to me to appeal only to a very special portion of the general public, namely:—

1. To those who do not think that they are already well served by their present financial advisers.

2. To those with the desire and leisure to give a fair amount of attention to their investments, and are not averse to frequent changes.

While I do think that there is plenty of room for something of the nature as suggested, I doubt if you will find a sufficient number of persons willing to pay you adequately, it being, of course, quite out of the question that you could tout for subscriptions or inundate people with circulars praising your system. I do not see that at present you can do very much more than you are already doing. From the general tenour of your Review I should say your advice is honest, disinterested, and eminently sound. If means could only be found to get that fact better known and appreciated by the public!

If I were asked for a suggestion it would be in the direction of allowing a certain number of comments free of, or at a reduced charge, to annual subscribers.

M. H.

Bartholomew Road, N.W.

If the proposal were adopted I should certainly subscribe to the special sheet, whatever the amount. The paper at present is very good as a REVIEW, but criticism is not what is wanted.

Investment is the primary occupation of few, the subordinate occupation of many. The latter want guidance in changing their investment and have little time or attention to give to the appreciation of criticism, however good. After a review of the returns of the Board of Trade we want the inferences, if any, as to what lines are selling well and what public companies will prosper.

After commenting on the rise in the Spanish Exchange we want an analysis as to what companies will find their nett profits improved.

The reduction of the tax on tea seems to have gone all to the producer. Hence many tea companies' shares have recently improved.

No doubt you noted the improved price of tea, but you did not point it out to your readers or indicate the tea companies most likely to benefit.

My facts and inferences may be right or wrong, but the average investor has not the time or attention to note the former or make the latter correctly; he wants it done for him. No paper does this, though the *Daily Report* sometimes attempts it or simulates an attempt. Everyone wants it.

R. W. W.

Albert Square, S.W.

The proposal on page 672 raises some difficulties. Here is one, the varying principles on which investors would wish you to go. For instance, I look out for markets that are depressed and securities that are under a temporary cloud. Of course I make mistakes. I buy too soon, before the market has got very low, and before the cloud has got very dense; and I run the risk of thinking a cloud is temporary when, in fact, it will burst and sweep away my little venture.

But I do not put into such things more than £200 to £300 at a time. Though I get hit, I still think my principle is right *for me*. But I could not recommend it to others. Your circular to the steady 4 per cent. man would be of little use to me. And the circular that would do for me would be sure to arouse the discontent of those who have scolded you for your gold trusts. For you will occasionally form a wrong estimate of the value of a security—with all your knowledge of markets. I shall read with interest your further references to this subject.

W. B.

Huddersfield.

SIR,—Referring to your article in the INVESTORS' REVIEW, "Is this a practical suggestion?

We sincerely hope it will prove to be practical, and will gladly avail ourselves of the help which the article in question foreshadows.

You may remember that as long ago as 1900 we made a private arrangement with your Mr. Wilson, sen., on somewhat similar lines, but through some tactlessness on the part of our intermediary the working details fell through.

The "subscribers' suggestion" is almost exactly our particular proposition, and his difficulty our difficulty. We are tea merchants, not in touch with the pulse of money or stock markets, or their fluctuations, or the cause of such fluctuations. We want honest advice and direction, a watchful eye on our hoarded profits wherever invested, and we will pay a fee commensurate with the professional knowledge and time required. May we hear further from you in course?

Yours faithfully,

BROOKE BOND AND CO., LIMITED

(A. Brooke, Chairman).

GERMAN IMPERIAL FINANCE.

The Imperial German estimates for 1907 have been made public this week and afford rather gruesome reading. Altogether about £128,254,000 will be required, and the Budget is made to balance at that figure. This is arrived at by converting the mark at 20 to the £. Of the heavy total £114,825,000 is to be met out of the ordinary revenue, although nearly £14,000,000 of it is called non-recurring expenditure, a fanciful way of disguising the rapidity with which the empire is eating up the people's substance. The extraordinary estimates will take £13,238,000, chiefly because of the insatiable demands for the army and navy. Hence money will have to be borrowed, and authority is asked from the Reichstag to issue Imperial Treasury bonds for a sum not exceeding £17,500,000. As compared with the current year the ordinary expenditure is up by over £7,157,000, and the extraordinary by £1,417,000. The Army alone will take about £27,000,000, including £2,057,000 of extraordinary outlay, while the Navy will run away with almost £14,000,000, the ordinary outlay being put at £11,055,000, and the extraordinary at £2,845,000. This is an increase of £1,330,000 on the current year's figure. No less than £4,294,000 is put down as "non-recurring" expenditure on new construction. After all these demands are made it is not surprising that little would seem to be left for the purpose of internal improvements, and we are not done with the naval and military expenditure by looking at these totals alone, for the German colonial Empire is calculated to require £5,651,000 next year. This is £768,270 less than last year, because less apparently is going to be flung away in the South-West African war, which appears to be as endless as the Dutch war in Acheen. But it is not all saving by any means, for about £535,000, representing the sixth instalment of the Chinese indemnity, is taken as revenue, together with £31,000, a sixth instalment towards the wiping out of that splendid piece of plunder. The East Asiatic brigade, however, is to be withdrawn from China so that there are some savings to be effected. For all that the debt of the Empire grows, and on October 1 amounted to £190,175,000, an increase of upwards of £15,000,000 on the year. The total cost of the service of this debt is put at £6,830,000, and it will again be considerably augmented in the current year. In all this Germany is only imitating the United Kingdom, but the German people are not so rich as the British, and exhaustion with disastrous consequences may come upon them sooner. How long is this unspeakable folly to continue, whether there or here?

COMMERCIAL BANK OF SCOTLAND, LIMITED.

We give prominence to the report of this bank for its year ended October 31 last, because it does not at all please us. It is with no small regret that we make this remark because we have looked upon the Commercial Bank of Scotland as a steady-going, old-fashioned institution, not very progressive perhaps, but sure if slow. Its figures, however, have been exciting disquieting thoughts in our mind for some time back, and although the net profit for the past year is only £4,392 less than in the previous year at £240,064—the gross being £1,570 more—we cannot feel at all sure that it has been quite earned. Let us recite the facts so that readers may judge. Adding £21,346 brought forward, the divisible sum is £261,410, and the usual 20 per cent. dividend is paid—half last July, half next January. In addition the same amount of £30,000 is set aside as general provision against depreciation on the bank's investments, but there is no £20,000 assigned this year to the officers' pension fund as was the case a year ago. And although £5,000 is put aside in reduction of the cost of the bank's premises, the similar sum devoted last year to writing down cost of bank furniture is omitted. In this way the balance carried forward is raised by fully £5,000 to £26,410, but two years ago the said balance was nearly £32,000, and the small sum written off cost of bank premises does not prevent the total sunk in that direction from being £4,000 up at £520,000. That is not much, but yet hardly progress.

As to the balance-sheet, the liability on deposits has risen £441,000 to £14,469,000, and the note circulation remains about the same, only £874 down at £1,007,960, but there is an increase of £90,000 in the acceptances. The increase in deposits is not to be wondered at when we find the bills discounted up £77,000 at £3,129,166, and the advances on current accounts higher by £543,000 at £4,221,677. To be sure, short loans on securities have declined by about £622,000 to £2,038,234, but money lent on call and short notice is larger by £481,000 at £3,187,017, and, at the same time, "specie at the head office and branches, and cash balances with the Bank of England and other banks" has fallen off by almost £117,000 to £908,431. This is a decrease upon a

---

LONDON AND SOUTH-WESTERN BANK.—The statement for November shows current accounts and deposits of £13,845,374, other liabilities £540,006, and acceptances and endorsements £9,026, against assets consisting of cash in hand and at Bank of England £2,101,005, money at call and short notice £934,440, British Government and other securities £4,026,619, and bills discounted, loans, &c., £9,323,316.

decrease, and the general aspect of the balance-sheet gives an impression that the bank is locked up in a variety of ways. Too much money is floating in the London market, and the cash and immediately available credit balances are steadily falling off, so that the total of such is now considerably below the notes in circulation. Investments in British securities, however, are up about £40,000 to £1,183,000, although there is a decrease of £70,000 in the other securities owned, described as "Indian and Colonial Government securities, Bank of England stock, debenture stocks, and other investments," the total of which is now £1,929,901. There are other minor items in the balance-sheet, which might be animadverted upon, but the changes in some of these leading entries point with emphasis to a rather uncomfortable position, and perhaps afford a hint of the undisclosed motive for that remarkable resolution which is to be submitted to the shareholders for approval at the annual meeting to be held in Edinburgh on Monday next. So remarkable is this resolution that we append it at foot, merely asking what such a widening of the powers of the bank board signifies. Does it mean locks up of various kinds? We have noted from time to time with regret that the Commercial Bank of Scotland is prominent amongst those banks that have committed their funds in indiscreet amounts to South African finance. Are the directors now desirous of placing themselves in order as before the law and before their shareholders through this resolution?

It is resolved that the capital and other funds of the Bank may be invested in any securities or investments from time to time competent to trustees in Scotland or England and in the debenture stocks, bonds, promissory notes, and other obligations of railway companies incorporated or operating in any part of the British Dominions or in Europe or in the Continent of America, and in the public stocks, funds or securities, or the bonds or other obligations of any State, Dominion, Commonwealth, Colony, Settlement, Protectorate, Possession, Administration, Province, Municipality, or other authority in the British Dominions, or of any State under British control or administration, or of any Foreign State, or in any other security, investment, or property, real or personal, which the directors may approve, excluding always stocks or shares known to involve unlimited liability.

The Rand Labour Question.

The Transvaal Chamber of Mines has issued for publication some correspondence between it and the Portuguese authorities relating to the granting of special facilities to the Robinson Group of Mines for recruiting in Portuguese East Africa. From this it appears that the Witwatersrand Native Labour Association is feeling terribly sore over the fact that Mr. Robinson should apply for an independent licence to recruit. This is described as a breach of the agreement binding together the members of this association, but the correspondence was going on before the Robinson Group seceded from the Chamber. So the arguments hardly apply now. The correspondence is of no great importance except as a revelation of the bitterness existing between all the leading groups and Mr. Robinson, and of the lengths to which the association will go to maintain its recruiting monopoly. This monopoly has certainly brought no benefits to the mining industry; it has been a lamentable failure, either through causes beyond control or causes the Chamber has itself created in order to formulate a plea for the importation of coolies. There is nothing new in the arguments, for they are purely interested and narrow-minded, but they confirm Mr. Robinson's assertion that the association has done its utmost to put obstacles in the way of his recruiting for himself. It resolves itself into this:—Is a monopoly more advantageous to the industry than unfettered competition? A monopoly can rigidly lay down a scale of wage, competition is at liberty to offer what wage it pleases to attract labour. And as the monopoly has hitherto failed to get a sufficiency it is to the interests of the industry to try a freer method. But the association knows that, with the help of the Liberal Government, its monopoly is weakening daily and may not last much longer, so it is fighting for its existence. This will explain much of the bitterness and heat with which the letters are loaded. Acting on the very wise suggestion of the Portuguese authorities, His Majesty's Government and the Portuguese Government are joining hands in an inquiry into the whole system of recruiting in Portuguese East Africa, with the object of determining which system is the best, both from the point of view of supply and of treatment of the natives. This is by far the best solution of the problem. Why does not the association regard it so? Why is it wrathful with the Government? What has it to fear from such an inquiry? Why, indeed, does it not welcome so practical a suggestion? The answers that must logically be given to these questions cannot show up the monopoly in a favourable light.

No Hope of Cheap Money.

How can money become cheap while the demand for credit continues to increase? If readers will look back to the history of past crises in the money market they will find that invariably cheapness returns to the market only as a result of a more or less catastrophic fall in the prices of securities. A fall either cancels or releases credit, diminishes the demand for accommodation and brings a surplus of bankers' money into the market, or destroys temporarily the power of many to borrow; by help of these derangements the financial body corporate is enabled to recruit and recover health. But what we now see is a continual advance in the prices of securities, accompanied by an imperative increase in the demand for credit. The more money becomes dear and difficult to obtain the wilder grows the speculation for the rise and the greater the consequent demand upon bankers for assistance. This week, as we note elsewhere, the Secretary to the Treasury at Washington has been doling out money in various ways to assist the New York banks and financiers in sustaining their desperate gamble. But the day after he poured out his millions money rose on Wall Street to 15 per cent., and no matter what happens it must continue more or less dear. There, just as here, the operation of pouring additional currency into an inflated and strenuous market resembles an endeavour to stop a boiling pot by adding cold water. As long as the pot is on the fire and the fire active the water will boil again within a few minutes. It is so with the money markets, not only of New York and London, but over all the world. They are continually adding fuel to the fire, ever furiously manufacturing fresh securities involving additional demands upon the credit resources of banks, and just as strenuously and unremittingly driving up prices so as to further enlarge the demands upon the available means of money markets. They keep stoking up the furnace, so to say, and as long as this continues money must remain dear. We cannot, therefore, look with confidence for any reduction in the Bank rate next month or early next year. Nothing can bring that reduction about naturally in present circumstances except a fall in prices. If gold is added to the Bank's stock it will only momentarily reduce the high rates for loanable capital ruling in the market. Therefore until we can see prices settling down and insane speculation checked, we cannot look forward to any durable amelioration of the present monetary distress.

India Rubber, Gutta Percha and Telegraph Works.

It is no doubt inevitable that a business of this kind should suffer from more or less severe fluctuation, and for the twelve months ended September 30 last it was the turn for profits to show a reduction. In the previous year they had shown a very important recovery from the still greater fall experienced in 1904, and shareholders perhaps would be well advised to clearly recognise that these variations will almost certainly continue, and not become unduly alarmed by them. A rise or fall in the cost of raw materials—and during the past years the tendency has been consistently upward—cannot be immediately neutralised by an equivalent movement in selling values, and it appears that the company suffered in this way during the period under

review. The cost of raw materials remained at a high standard throughout the year, and in expectation of a fall that did not take place a comparatively low range of selling values was maintained by the trade generally. At the same time the general business of the company showed a falling off against the previous year, but it is quite possible that if selling prices have now been adjusted more in conformity with the price of first-hand materials, the display for the twelve months now current may again be better. We are encouraged to think this way because the electrical equipment at Persan is progressing satisfactorily, and will probably be completed during the next year, which should enable the company to reduce the cost of manufacture and so help profits. The laying of the Shanghai-Manila cable referred to in the last report was completed in April, and we gather that since then the cable steamers have not been under employment, as both the *Silvertown* and *Buccaneer* have been extensively overhauled. As will be seen from the comparative statement of profits given below, the trading revenue, after making provision for doubtful debts, &c., was £146,723 against £169,452 in 1904-5, £119,010 in the year before that and £196,096 in 1902-3, which bears eloquent testimony to the variable character of the business. General expenses were brought rather below the level of 1903-4 at a total of £65,431, showing a decrease of £6,293 compared with the previous twelve months. Depreciation was also slightly smaller at £23,435, and income-tax, directors' fees, &c., required only £4,384 compared with £5,664. Debenture interest is £16,250 or £250 less, and the balance of nett profit shows a decline of £14,508 compared with the reduction in the gross total of £22,729. This means that over £8,000 was saved in the various items of expenditure. To the profit is added the sum of £55,003 brought forward, the company always keeping a very substantial balance in hand, making the disposable credit £92,224 compared with £105,003. Nevertheless the directors maintain the dividend for the year at 10 per cent., carrying forward £12,779 less at £42,224.

	Year Ended September 30.				
	1902.	1903.	1904.	1905.	1906.
	£	£	£	£	£
Trading profit	163,725	196,096	119,010	169 452	146,723
General expenses	67,991	76,055	05,506	71,724	65,431
Income-tax, directors' fees, &c.	6,720	7,322	6,841	5,664	4,385
Depreciation	19,460	46,150	21,069	23,835	23,435
Debenture interest	12,000	12,000	14,250	16,500	16,250
Nett balance	57,554	54,569	11,344	51,729	37,221
Brought forward	54,807	62,361	66,930	53,274	55,003
Total available	112,361	116,930	78,274	105,003	92,224
Dividend	50,000	50,000	25,000	50,000	50,000
Carried forward	62,361	66,030	53,274	55,003	42,224

Two years ago when the profits suffered very severely the directors decided to reduce the dividend from 10 per cent. to 5, because the payment of the larger amount would have meant drawing on previous revenues to the extent of £40,000, a sum which the directors evidently thought too much. In view, however, of the fact that in the current year the profits may easily be on the up grade again, the directors see no reason why about £13,000 should not be taken on the present occasion in order to maintain the dividend. The money comes from the undivided profits, and leaves the fine reserve fund of £450,000 intact. It is true that in a sense this reserve is invested in the business, but the company is undoubtedly well supplied with liquid resources, even though the auditor's certificate is given subject to the correctness of the value placed on the shares in other companies standing at £61,243, an increase of £5,298. Cash, stock, debts, &c., at Persan and agencies, after deducting liabilities amount to £317,947 or £30,131 more, the separate cash balance is £41,847 and stock-in-trade appears at £402,106. Only £63,183 is owing to sundry creditors against debtors of £102,406, and bills receivable of £584. The property account, which includes steamships, shows a reduction of £9,503 at a total of £561,806, and although nothing has again been written off the boats for depreciation, all cost of maintenance has been charged to revenue, and doubtless also the extensive overhaul to which the vessels have been subjected.

New Vaal River Diamond.

The directors of the New Vaal River Diamond and Exploration Company—to give it its full title—have issued their fourth annual report, and those who expected to see a large revenue from diamonds will be considerably disappointed. The income from this or any other source is trifling, and when it is compared with the excitement in the market, and the huge premium at which the shares stand, it is really ludicrous. In the aggregate the revenue was only £8,900, consisting of £5,074 royalty on diamonds, £1,491 claim licences, £2,237 rents, grazing licences, and sundries, and £159 interest and commission. And even this little sum was less than the company got in the previous year, which was £9,901, so as the income goes down the shares go up. However, the directors managed to economise in various directions, and to reduce the expenditure from £8,302 to £5,761, hence the nett profit increased from £846 to £5,761. This is described as "a very substantial increase," and so it comparatively is. It is not, however, upon actual diamond winning that the gamble is based but upon the vague announcement some months ago of new discoveries. One looked for a dissertation on these discoveries in the report, for here was a fine opportunity to go into details and tell everybody all about the veiled marvels; and the directors disappoint us. They make the briefest possible allusion to these discoveries, as though they were of slight importance, a mere casual happening in the company's great career:—"Your directors, with great pleasure, inform you that very large and important areas of alluvial deposits have been discovered on the hitherto unexplored farm Droogveldt. Proposals which will assist in the exploiting of part of these areas will be laid before you." That is all. So there are no new facts, nothing to enable one to form an approximate idea of the value of these finds. As a matter of fact, the entire report is brief, and the gist of what is given can easily be summed up in a sentence, most of it being a paraphrase of the accounts. At the end of the previous financial year, June 30, 1905, a sum of £2,901 was carried forward to the credit of the profit and loss account from various years. This has now been written off by the directors of the London and Kimberley boards, in order, so they explain, to confine the balance-sheet to liquid assets, property and machinery only. It will be news to many to learn that the directors have in contemplation the cultivation of tobacco, and believe it will become an important part of the company's business. So if diamonds should not be found there will be the weed to fall back on. The liquid assets are, cash £4,736, and sundry debtors £503, but this compares with £795 owing to creditors. It may be recalled, however, that an extraordinary general meeting was convened at Kimberley on the 12th ult. to consider the increase of the capital to £200,000, and the raising of £50,000 on debentures. A report of the proceedings at this and at the ordinary general meeting accompanies the report of the directors, but even from these no fresh facts are to be gleaned. Does wisdom counsel secrecy?

The Arbuthnot-Macfadyen Failure.

An interesting communication appeared in the *Times* Money Article on Monday last, dealing with this ghastly business. The failure has ruined many people in India, and crippled not a few amongst the retired civil and military servants of the Indian Imperial Government, many of whom are now ruefully contemplating the results of their trustfulness. They would not put their money with joint-stock banks, but much preferred "Arbuthnots." In one sense they had good reason for this preference. The firm was established over a century ago, and for the greater portion of that time appears to have deserved the confidence placed in it. Since, however, Mr. Macfadyen opened the London agency in 1887 the business has gone steadily from bad

to worse. He seems to have been an inveterate plunger, and, according to a report of the official assignee, between 1887 and 1893 he lost £100,000, and again between 1893 and 1900 another £100,000. No proper books were kept, no partnership deed exists, nor was any attempt ever made to ascertain the real position of the firm. It plunged and lost, speculating not only in London, but in the Madras Presidency, sinking the money of its clients in coffee and indigo enterprises which resulted in losses. During 1902-3 also the joint operations of Mr. Macfayden and Sir George Arbuthnot in gambling on the Stock Exchange during the Boer War resulted in the loss of three or four lacs of rupees (£20,000 to £27,000). The firm was robbed besides, and altogether its operations were so calamitous that at the date of the suspension on October 22 last the deficiency on the whole business in India and London came to £1,791,102.

That there will be any assets worth having is as yet seemingly doubtful. There is no uncalled capital to fall back upon, and it is to be feared that the private property of the surviving partners is not of much value. An attempt is apparently to be made to re-start the business under the title of Arbuthnots, Limited, but it cannot offer much prospect of success. The best that can be hoped is that such assets as exist will be nursed and carefully handled until they can be realised, and that such good business as remained may be carried to completion at a profit. It is really an appalling story, and not least so in the exhibition it gives of the power of credit. Once let a man or a firm be trusted unquestioningly, and he or it may conduct a business for almost an indefinite time after being insolvent. "The ledgers," says the report of the accountants, "were full of so-called assets, beyond all belief worthless, which crumbled to dust when touched," and it is added "the actual losses on the working of various enterprises carried forward and added year after year balances of loans the security held against which has long since been realised or become worthless, old debts relating to a previous partnership, hopeless advances and balances of all descriptions, in many instances still further increased each year by addition of equally hopeless interest—all these help towards making up the present balance of deficit." "We have sought diligently," the accountants go on to observe, "for any facts which we could set out and weigh against those contained in this report, but at present we are sorry to say without success." How many other firms are there in a similar position? Arbuthnots cannot have stood alone. They were not the only plungers on the Stock Exchange during the South African war or since. Where are the hundreds of millions that have been lost during the last seven years buried? We know not, but of this be sure—a 6 per cent. Bank rate is not inflicted upon us without cause, and if it last long enough it may be trusted to uncover many unsound spots.

The Victoria Falls Power Enterprise.

After the "Passing Event" note in another column had gone to the printer we received from the Chartered Company two papers dealing with this project, and very nicely got up. One of them is quite in Blue Book form, and has been printed by Eyre and Spottiswoode, his Majesty's printers, so that it has all the appearance of a Government paper. The other is like an official white paper, and contains biographical notes on the president and directors, trustees for the debenture holders, engineers-in-chief, electrical engineers, advisory board of engineers, and solicitors of the projected company. We have not had time to study these biographies, but shall file them for future reference because some of the men written about are very great personages indeed—marquises and dukes and people of that description. But the "Blue Book" really deserves a word or two, for it excites no small admiration. Obviously, the board of the Chartered Company possesses some on its staff who can write. The story is told in a style immeasurably superior to that of the *Times* advertising staff—much more official and dignified. What could be more delicious, for example, than the grave statement that "throughout the war Rhodesia, under the administration of the British South Africa Company, remained absolutely loyal to the British connection? Its territories were not invaded, and its industries, though retarded, were not crippled." All this for a white population of 10,000 or 12,000 scattered over a country about twice the size of Germany is distinctly brilliant, but the entire history is nice and prettily put. It begins by telling us that Dr. Livingstone discovered the great falls on the Zambesi in November, 1855, and gave them the name of the late Queen Victoria, and goes on to tell us how the late Cecil Rhodes, "with his usual receptivity of large ideas," at once saw that there might be something in this electrical enterprise. Then the project itself is nicely described, and incidentally we are informed of the intention to construct a 24,000 horse-power steam-driven station on the Rand, while as to the hydraulic power to be developed at the Falls, that is the simplest thing possible. And the uses to which this power may be put appear to be infinite, for it is required not only for winning gold, diamonds, coal, silver, copper, zinc, and lead, but may be employed to advance the cultivation of tobacco, cotton, coffee, wheat, oats, and rubber. Power, it is said, is also necessary for irrigation, light railways, tramways, and lighting so that the realisation of this great project means "an industrial revolution for South Africa." We can quite believe that, and when South Africa is peopled with whites, in the days when our grandchildren's heads are turning grey, perhaps the dream may become a reality.

Showell's Brewery Company.

Reconstruction in order to provide for capital losses must always be a painful business, and because this is so it is often difficult to devise a plan which shall measure out equal justice to all interests. Much time has been consumed in reconciling the varied claims of this company's shareholders, but the representatives of the three grades of proprietors have now hit upon a scheme and submit it for consideration. A deficiency of £289,560 has to be made good out of a share capital of £610,000, the debentures of £429,900 being, of course, left alone, and while the ordinary shareholders must make the largest nominal sacrifice, the preference and guaranteed holders are called upon to share the burden in a very real manner. The preference capital is to remain at £110,000, but the dividend is to be permanently reduced from 7 per cent. to 5, while the guaranteed capital is to be cut down by £60,000 to £140,000, and the dividend from 6 per cent. to 5. Moreover, the dividend arrears on these two classes of capital are to be waived, thus leaving the ground clear for a proper fresh start. This will leave about £230,000 to be wiped off the ordinary capital of £300,000, leaving it at about £80,000, but it will receive direct benefit from the dividend given up by the prior holders. In the event of liquidation the preference capital is to be returned in full, and the surplus distributed in the proportion of two-thirds to the guaranteed and one-third to the ordinary until the guaranteed has received £140,000, all the balance, if any, to belong to the ordinary shareholders. This seems quite fair, although strictly the ordinary proprietors rank equally for capital with the guaranteed, but then the latter are giving up a portion of their dividend. It also seems reasonable that under the new conditions the prior capital should be given certain voting power, and the suggestion is made that each £1 of preference and guaranteed capital should have one vote and each £1 of ordinary three votes. We assume, however, that the representative of the ordinary shareholders does not agree with this recommendation, since he does not sign the report in which it is put forward. But if the ordinary shareholders will not make this concession the preference and guaranteed may retaliate by refusing to forego dividends. Last year to September 29 the company earned a profit of £29,208, and after providing debenture interest, directors' fees and £3,676 for the compensation fund a sum of £5,186

is left, which brings down the deficiency to the figure named. The property account now has a book value of £681,413, other assets are entered at £39,963 and stock at £63,884. Sundry liabilities, however, are heavy at £82,971 against debtors of only £28,989 and cash £101. Certain investments entered at £18,799 are not marketable, and their value cannot be assessed.

American Business Notes.

Affairs in New York are getting dangerous, and we fear the Secretary of the Treasury's pills for the earthquake in the shape of $10,000,000 of outstanding debt to be bought in and $25,000,000 of Treasury cash deposited against Savings Bank bonds or against the New York balances of out of town banks, will not go far to relieve the strain. It is not little sums like these that New York requires, but hundreds of millions of dollars in order to permit the arch-conspirators against the world's business peace and the domestic well-being of the people of the United States to triumph, to go on "merging," combining, suborning and inflating. Last week's New York Bank figures indicate that a crisis in the affairs of these potentates might be upon us any day. The tiny legal surplus of the previous week has disappeared and given place to a deficiency of $6,708,000. That is the amount to which the reserve has sunk below the legal minimum. A year ago the shortage at the same date was $1,247,000, and money rose soon after on Wall Street to, if we mistake not, 125 per cent. This week the rate for call loans has been ranging between 30 and 35 per cent., and "time money" quite early in the week cost 7 to 9 per cent. These changes, moreover, have taken place in spite of the fact that by some legerdemain or other the banks manage to show a reduction in loans of $16,457,000. They could not help themselves, for currency continues to flow away from them. The decrease in the specie held was $9,732,000, and in legal tenders $2,533,000. This drain must continue for the remainder of the present year, and we really cannot see where or how relief is to be found. As long as prices are ballooned up on Wall Street, kept away in the upper air beyond merely human reach, the devouring requirements of the financiers for credit assistance must remain insatiable.

The Atchison Railroad is going to increase its common stock only by $98,000,000, so as to bring the total up to a round $200,000,000. Instead of stock, power will be taken to issue convertible bonds, but the first slice, whether of stock or bonds, may not exceed $25,000,000, which is modest and comforting. We forget the amount of the company's "surplus."

The production of coal in the United States for 1905 exceeded in quantity and value that of any previous year, the amount being 392,919,341 tons and the value $476,756,693. Compared with 1904 this was an increase of 41,102,943 tons and $32,385,942. Of the total production in 1905, 77,659,850 tons were Pennsylvania anthracite, valued at the mouth of the pit $141,879,000. That of bituminous coal and lignite was 315,259,491, valued at $334,877,963. The increase in the production of anthracite and of bituminous coal and lignite respectively was 4,503,151 and 36,599,882 tons. The increased production is attributed to the great activity in the iron industry, from the fact that the amount of coal made into coke increased from 31,278,573 to 42,412,328 tons, and that the larger increases were in those States where there was the greatest demand for coking coal and fuel for the iron furnaces.

Some interesting facts were brought out on November 24 during an inquiry by one of the Interstate Commerce Commissioners at Chicago into the matter of the payment of fines for rebating by the Burlington Railroad Company. It was declared on oath that the fines were assessed upon the stockholders and charged against freight earnings. This was brought out in the case of the first vice-president of the Burlington and its foreign freight traffic manager. They were fined $40,000 by the United States District Court for granting rebates on shipments of tin sent by the United States Steel Export Company to Vancouver in British Columbia. This fine was on the corporation, and the first vice-president and freight agent were mulct in $10,000 each. The fines were paid April 26 of this year by cheque for $60,000 to the Clerk of the United States District Court by the solicitor for the Burlington Railroad Company. The general auditor of the company explained that the money was charged to the account of "correction of freight earnings," and was spread over two months; in other words, the accounts were "fudged" so as not to show too great a difference in the monthly report of the division that carried the freight. The president of the company had ordered the cheque to be made out and had approved the voucher, and admitted it, and also that the directors had not approved nor had been asked to do so. The Interstate Commerce Commissioner, however, said that it was not a matter with which he had to deal, but was for the stockholders to settle with the board of directors.

A movement has been begun by the stockholders of the Delaware and Hudson Railroad Company to extend the business of the line and add to its earnings. The southern terminus of the road is at Wilkesbarre in Pennsylvania, and the northern at Rouse's Point on Lake Champlain on the Canadian frontier in the province of Quebec. An effort will be made to effect a junction with the Quebec Southern, whose acquisition fell through a short time ago, and to eventually gain possession of that road. This would give the Delaware and Hudson, commonly known as "the road which runs from nowhere to nowhere," an entrance into Quebec without paying, as at present, excessive traffic charges to the Grand Trunk, and would enable the company to secure competition for its business in and out of Canada between the Grand Trunk and Canadian Pacific companies. The Grand Trunk is at present the only road connecting with the Delaware and Hudson's northern terminus. Some account of the personnel of the Delaware and Hudson directorate will not be without interest at this juncture. Mr. Wilcox, the president, has been in office three years, and is also a trustee of the Mutual Life and a director of the Union Pacific. Among the other Delaware and Hudson managers are Mr. Chas. A. Peabody, president of the Mutual Life, and E. H. Harriman, president of the Union Pacific. The first object is an increase of the dividend from 7 to 10 per cent., as the company is said to be earning 25 per cent. on its stock.

The two Interstate Commerce Commissioners who conducted an inquiry in Minnesota toward the end of November into the grain pool, referred to a few weeks ago, discovered that the whole grain market of the United States and largely that of the world was dominated by a headless combination of some 000 North-western grain elevators. Mr. Lane, one of the Commissioners, speaking of the "pool" after the inquiry, described how every book, letter and other document had been carefully burned, and that but for the testimony of witnesses not a scrap of evidence would have been obtainable. Most of the burning was done recently, apparently in anticipation of investigation, and took place soon after the passage of the La Follette investigating Act by Congress. The business was divided among the elevators at more than two hundred railway stations, and controlled the market for wheat, barley, flax and oats, and was able to dictate the market price at Chicago, Baltimore, New Orleans and all other dealing and shipping points. The evidence of agents of elevator companies who, on behalf of their corporations had concluded the dominating agreement, was obtained by the Commissioners. Though the pool was headless, being without president or secretary or any other official except a "central agent," a system of penalties was agreed upon, and was rigidly enforced when any member of the pool was caught violating the orders of the central council. All the witnesses strenuously denied the existence of

a "gentlemen's agreement" at present, and one explained that it is no longer necessary.

Mr. Shaw, Mr. Roosevelt's Treasurer, is of opinion that "our blessings" are the real cause of the actual stringency of money in New York. The unusually large crop and unexampled industrial activity have created an unprecedented demand for money. "We never had such a volume of credits. They are based on an unequalled volume of assets"; so he thinks there is no cause for alarm although "relief" is required, and the cotton crop would certainly seem to be big enough after all to make it difficult for the forestallers to keep up the price of the staple. The cereal crop is also difficult to sell at monopolist prices, and it may be that in the effort to dispose of assets such as these their value will not prove to be equal to the credit reared upon them, but the observation of the Secretary to the Treasury throws an interesting light upon the intellectual calibre and moral standpoint of American politicians.

It in no way surprises us to learn that the Wall Street market was staggered a little by the news that Mr. James J. Hill's Great Northern Railway is going to issue another $60,000,000 of capital. It issued $25,000,000 towards the end of last year, so that within little more than a twelvemonth fully £17,000,000 will have been added to the ordinary stock of this ambitious property, bringing the total outstanding up to $209,029,400, or £42,000,000, and this stock, in the usual fashion of American and Canadian railway companies, is to be allotted to existing proprietors at par to the extent of 40 per cent. of their present holdings. Thus a large bonus will be given away at the expense of the company so as to tempt subscribers and without the slightest regard to the interests of the property. What the exact bonus will be we do not know, because no quotation for the stock is within our reach, but it has received a 7 per cent. dividend for the past year. Shareholders who subscribe are to be allowed two years in which to pay up the money, but that makes the gambler's-throw aspect of the transaction only the more apparent. And there is a fly in the ointment. The State of Minnesota has intervened, declaring the issue to be illegal and announcing its intention to fight the mighty J. J. Can these things be?

Not to be outdone by the Great Northern, the Northern Pacific immediately comes forward with an issue of $100,000,000 in new stock to be allotted at par to holders of the already issued stock, also in the ratio of 40 per cent. of their present holdings. This will bring the total of the common stock up to $255,000,000, and as the present quotation for the stock is about 225 the "plum" will surely allure. But where lies the "surplus" of $5,556,000 shown in last year's accounts after allocating more than $6,000,000 to "betterments"? Oh, those betterments!

Passing Events.

We hope those members of the present Parliament who are anxiously striving to bring about economy in the National expenditure have taken note of American criticisms upon our wonderful *Dreadnought* style of battleship. Especially remarkable was the criticism of Mr. Meigs, of the Bethlehem Steel Works. Without denying the value of long range guns in certain circumstances, he pointed out that all effective naval actions had been fought within point blank range. At that range guns do not need to know the distance of the target. In other words, all this straining after powerful guns capable of hitting an enemy six or seven miles away is flying in the face of all experience in naval warfare. No regard is had by the monster of the deep inventing landsman to the unstable basis on which the gun rests. A vessel moving in the water, heaved up and down by the waves, cannot possibly afford a foundation on which to work powerful guns, guns of any sort requiring the utmost delicacy of aim. Mr. Meigs is against these huge guns, not for that reason alone, but also because they cannot be fired with the rapidity of smaller weapons of destruction, and this criticism seems to us most pertinent. None the less is the present Board of Admiralty intent upon continuing the costly experiment, and unless enlightened opinion from outside or within the House of Commons itself is effectively brought to bear we shall continue to waste tens of millions in perpetuating what is essentially the nightmare of the inventor gone daft. The emulation thus fostered between nations is ruinous to all concerned, as we shall ere long find out. And how essentially cowardly this straining after the immune in war is—the cowardice of the decadent.

M. Pichon, the French Minister of Foreign Affairs, has made the welcome announcement that no Russian loan is being or will be negotiated in France. If the Cabinet of M. Clemenceau stands by that resolution there will be more hope for the Russian people than a contemplation of the internal state of the Empire, as revealed in Press messages, permits us to nourish. Russian autocracy cannot maintain its blighting supremacy over the lives and property of the Russian people without the help of money provided by the usurers of Western Europe. But for this help Russia might have been free long ago, and our short-sighted Anglo-Indian bureaucrats and their supporters would have had no shadow of excuse for nourishing the Russian bugbear.

As a matter of history we record the issue of the new constitution granted by Royal Letters Patent to the Transvaal. It was published in Thursday's newspapers and would appear to be in the main satisfactory. Especially is it so in the equitable treatment as to franchise of the white population, British and Dutch. It appears to guard our coloured fellow-subjects also against oppression; it further provides for the gradual removal of the Chinese serfs whose presence on the Witwatersrand is a plague spot, conducing to the ruin of the country, and, not least, from the point of view of British investors, to the ruin of Witwatersrand mining as a profit-yielding industry. We are not sure, however, that we can profess any affection for a nominated second Chamber. Why nominated? To be sure it is to consist of only fifteen members, but would it not have been possible to permit this revising body to be selected, in part at least, by the voters at the start? How can we trust the Earl of Selborne to choose impartially representatives of the various classes of the community? However amiable and well-meaning that nobleman may be he has undeniably shown himself an apt pupil of the "corner" house, of the Chamber of Mines, and it seems to us that power of this description ought not to have been left in his hands, nor indeed in the hands of any governor from home This nominated council is to retain its place for five years, and may continue to be nominated unless in the meantime the electorate can contrive a new system whereby an elected council can take its place How is the electorate to do this against the active or hidden opposition of the bureaucracy and the mine bosses?

Readers should carefully study the letter by Sir Alexander Kennedy, the eminent engineer, printed in another column, and then ask themselves if they can really suppose the directors of the Allgemeine Electricitäts Gesellschaft to be such fools as to risk any of their company's money in a scheme of the kind. Nearly every competent engineer is of the same opinion as Sir Alexander, and we are forced to conclude that the real motives underlying this wild project are not the ostensible ones We do not believe that the German company will risk a single mark in providing the means to bring the electric current over a distance of more than 700 miles to the Rand, but there may be some plunder in the thing for the Chartered Company whose need of funds must again be growing acute, and, as we said last week, it is more than probable that the real purpose is, as Sir Alexander Kennedy says, to establish a rival steam plant on the Rand.

As we remarked last week, we have noticed recently that a daily contemporary has, in its market reports, mentioned two or three copper companies whose names are quite unknown to us, nor have we been able to find

any particulars respecting them in the leading reference books. Yet, it is declared, dealings are taking place in such shares. Who are dealing in them? And by what means and methods are prices procured? Perhaps the *Financial News* will enlighten us; perhaps not. We drew attention to one such share in the Union Consolidated and wondered how it achieved this sudden prominence. We had no sooner gone to press, however, and before the REVIEW was on sale, than we received a type-written communication from a correspondent hailing from Kennington drawing our attention to this concern. It is, it appears, a South Australian property and "has just entered the list of producing mines," and he thereupon calculates what profits it should earn if so and so happened. He says the company has been established two years, and "is only in its infancy," has a modest capital of £150,000, and so forth, but he does not desire his name to be published. What objection can there be to the publication of authentic documents telling the public something of the concern? Why resort to this stealthy way of making it known? Not only the public, but the committee of the Stock Exchange might take cognisance of these surreptitious ways of "introducing" the shares of unknown prospectusless companies.

Another copper share in which we are told large dealings are constantly going on, sending up the price many shillings at a time, is the Great Cobar, also an Australian concern. The prospectus was issued some months ago, and the public was able to learn a great deal about it; but, all the same, we doubt if outsiders are doing much in the shares. The company was floated with a huge capital, and we believe the response of investors was so insignificant that the underwriters had to take up nearly the whole of the issue. Immediately afterwards the shares fell to a discount, as they were bound to do, with no legitimate market for them. But in the past three or four weeks they have been gradually lifted to a big premium, to between £8 and £9 per £5 share. How has this been done if, as we believe, the public are not large holders? We can guess only at rigging and manipulation to enable the underwriters and others to sell out at a substantial profit. If the market is confined to this limited circle of operators there is no reason why they should not call the price anything they please. It is not fixed by any genuine transactions. The company may do well by and bye, but miracles have not yet happened. When present holders have sold, if they can sell, the shares may fall to a very low figure.

The liquidator of this modest and respectable little bank, which went into voluntary liquidation on July 16 last, announces a first return of capital, amounting to 30s. per share, to be distributed on the 17th inst. The shares are £4 paid up, with a £1 liability, and instead of there being any deficiency to involve further drafts upon shareholders, the liquidator now announces a return of nearly 40 per cent. of the paid-up capital. He moreover retains cash in hand to meet all unmatured liabilities, the discharge of which will permit further returns to be made. This little bank ought not to have been permitted to stop payment, and it must never be confounded with the International Bank of London, which is quite another story.

We have not had a sight of it yet, but hear that the first report of the London Power Omnibus Company shows a loss of close on £17,000. Sundry excuses are advanced for this deplorable result, but the market was not much impressed, and the £1 shares promptly dropped to 7s. There is worse to come, however, from other companies unless we are much mistaken, and the only comfort is that, as a rule, the public ignored the invitation to subscribe to the multitude of motor enterprises put before them early in the year.

Some branches of the textile trades are undoubtedly doing well just now, but it cannot be said that the Bleachers' Association performed very brilliantly for the half-year to September 30. The nett profit, after providing debenture interest and all charges, is only £146,700 or nearly £10,000 less than in the corresponding period. The preference dividend is met from this, and £25,000 goes to the depreciation fund, leaving with the balance brought forward a credit to be carried out of £71,900, a drop of £6,600, so that the directors may just manage to squeeze out another 4 per cent. on the ordinary shares when the year ends.

Critical Index To New Investments.

FAIRFIELD SHIPBUILDING AND ENGINEERING CO., LIMITED.

This well-known business which took over the Fairfield Works, Govan, Glasgow, in 1889 for the construction of the highest class of warships and vessels for the mercantile marine, has a share capital of £500,000 all held privately. It has also issued £250,000 4½ per cent. first mortgage debenture stock and £100,000 5 per cent. second mortgage debenture stock, of which £80,000 is still outstanding. A large holding in the Coventry Ordnance Works was acquired recently, and in order to pay for this as well as to redeem the existing balance of second mortgage debenture stock and to provide funds for extensions at the Fairfield Works, an issue of £250,000 5 per cent. "A" mortgage debenture stock is offered for subscription at par. The new stock will be secured by a specific charge on the land, buildings and fixed machinery subject to the first debenture stock and by a first charge on the present holding in the share capital of the Coventry Ordnance Works, and will be redeemable at par on December 31, 1950, by means of a redemption policy with the Sun Life Assurance Company. Profits for the five years ended June 30, 1906, are set out in detail, and as they show an average of £149,992 per annum, there appears to be ample security for the present issue. The list closes to-day.

CHARRON, LIMITED.

This is another French motor-car manufacturing company which finds it desirable to come here for capital, or one which the ever-active promoter considers suitable for an English company. The business was established in 1902, and seems to have been prosperous, as profits before charging depreciation, interest and directors' fees amounted to £16,641 in 1903, £11,666 in 1904 and £42,578 in 1905, the big decrease in the second year being ascribed to special causes explained in the prospectus. For assets valued at £180,000 the Société Anonyme Charron, Girardot et Voigt takes £160,000 in cash, and £79,000 in preferred ordinary shares with the right to subscribe for 40,000 deferred shares, while the United Investment Corporation takes £1,000 in preferred shares and £4,000 in cash, and subscribes for the remaining 40,000 deferred shares. The total capital is £384,000, divided into 380,000 £1 preferred ordinary shares, entitled to a non-cumulative dividend of 7 per cent. per annum and 40 per cent. of the surplus nett profits available for distribution, and 80,000 deferred shares of 1s. each and 300,000 preferred shares were offered for subscription. A sum of £10,000 is paid to the promoters for preliminary expenses, and they also take £30,000 in cash for underwriting commission.

CANNAN'S SOAP WORKS, LIMITED.

The old-established business of William Cannan, Limited, Bradford, manufacturers of dry soap, soap extract, &c., is amalgamated with that of the Snow White Soap Co., Limited, of West Drayton, founded between five and six years ago, and the combination starts with a share capital of £50,000 in £5 shares, of which 8,000 are offered for subscription. For the Cannan undertaking the Snow White Company has undertaken to pay £3,000, and although it appears to be the larger of the two, the purchase price for the lot, including £6,000 for goodwill, is £50,500 in cash. No profits are disclosed, but it is stated that the sales of Cannan's have been as high as £11,000 per annum before Mr. J. B. Cannan's death, and that the directors

believe that with the energetic management now being introduced the above figure can be considerably increased. To an undisclosed amount the promoters add 50 per cent. for sales to the Snow White customers, and another 50 per cent. for sales of Snow White to their own customers, and present as the result of these fancy calculations a probable profit of at least £9,000 per annum. Puny as the concern is, the promoters actually quote the results obtained by Pears, Vinolia, Lever Bros. and other well-known makers as indicating the desirability of shares in soap companies as investments.

United Egyptian Lands, Limited.

This company has a somewhat ambitious programme, as it is proposed to give attention to the purchase, development and subsequent re-leasing of agricultural and building land, the lending of money on mortgage and the carrying on of the business of an investment company. Its energies, however, will for the present be devoted to the development of selected agricultural estates, and a beginning has been made with the purchase of an option over some 5,000 acres about 50 miles south of Alexandria, and connected by a tramway of 1½ miles with the Delta Light Railways system. The capital is £500,000, divided into 498,750 ordinary shares of £1 each and 25,000 deferred 1s. shares, of which 398,750 ordinary and 3,987 deferred shares were offered, each subscriber being entitled to one deferred share for every complete 100 shares allotted. Of the purchase price of £215,685 paid for the property £100,000 is payable in shares and the balance in cash, £20,000 of it before December 31, £30,000 before June 30 and £65,685 before September 30, with interest at the rate of 3 per cent. per annum. In addition, the company gives the H. and J. Syndicate 4 per cent. on this purchase money and the right to subscribe for 14,013 deferred shares for obtaining the option, and a commission of 6 per cent. and the right to 2,500 deferred shares for underwriting 250,000 ordinary shares. The fees seem high, and the prospects of the company are too vague for the shares to look other than speculative, but Egypt is a land of infinite possibilities, everybody says.

Mansfield and District Tramways, Limited.

The Mansfield and District Light Railways Company was incorporated in 1901 with a capital of £120,000, divided into 40,000 5 per cent. preference and 80,000 ordinary shares, and borrowing powers of £40,000 to construct a system of tramways in and about the borough of Mansfield, Nottingham. Of this capital 18,405 preference and 27,310 ordinary shares fully paid and 750 ordinary shares partly paid have been issued, together with £15,000 4½ per cent. debentures, and the new company acquires all except the 750 ordinary shares, which are held by the directors of the Light Railways Company, and will subscribe for 21,595 preference shares, 42,940 ordinary shares and £22,000 debentures. The new company has a capital of £130,000 in 80,000 6 per cent. cumulative preference and 50,000 ordinary shares of £1 each, and £70,000 in 4½ per cent. mortgage debenture stock, of which 17,233 preference and 15,182 ordinary shares and £20,000 debenture stock are reserved for exchange, 20,000 of each class of share are held in reserve and the remainder are offered for subscription. Very heavy commissions have been paid for underwriting the preference shares and debenture stock, amounting to no less than 15 per cent. and 11 per cent. respectively, to be satisfied as to 10 per cent. in each case in ordinary shares or cash and as to the balance in cash. A portion of the tramways was opened in the latter part of 1905, and the system as now completed has been in operation since August last. On the strength of the takings for this short period the gross earnings are estimated at £16,640 per annum, and working expenses are taken at 50 per cent. of this, leaving a balance of £8,320, which it is anticipated will be increased to not less than £9,000 per annum when the district is further developed. The estimate seems to be framed on insufficient data, and this fact taken in conjunction with the big underwriting commissions should be sufficient to warn investors.

Nymagee Copper, Limited.

This company acquires a freehold copper mine of about 758 acres in New South Wales, which has been worked for about 30 years, and during that time has produced about 231,413 tons of ore of an average assay value of about 8.58 per cent. of copper. It is estimated that there are 104,800 tons of ore in sight averaging 3.2 per cent., which seems a big come down, and Mr. W. H. Corbould, general manager of the "Lloyd" Copper Company, states that a profit of £3,000 per month is being made on a production of 1,000 tons of copper per annum. He estimates, however, that an expenditure of £15,000 should double this output at a total cost of £44 per ton of refined copper, yielding at present prices no less than £124,000 profit. The Nyngan Syndicate, which appears to be Mr. C. J. McMahon, director of the "Lloyd" Company, under another name, has purchased this "Tom Tiddler's ground," described in glowing terms by three experts, for £45,000 cash, and is content to make an immediate profit of a mere £55,000 on his deal, with the prospect of a further profit through the right for twelve months to subscribe at par for the 20,000 shares held in reserve. This present profit is apparently to be all in cash, as 130,000 out of the 150,000 £1 shares forming the capital are offered for subscription, 2s. 6d. being payable on application and 17s. 6d. on allotment, and 80,000 of them have been underwritten for a commission of 25 per cent.

Berry United Deep Leads, Limited.

For the sum of £100,000, payable in shares, this company acquires the property and undertaking of the Berry United Company, a portion of the property of the Great Berry Consolidated Company, and a further property known as the Kingston Leads, adjoining the main Madame Berry Lead, and having an area of about 7,500 acres. The Madame Berry Lead is said to be the most important system of deep leads in Victoria, and its course has been proved by extensive Government drilling and private works to run through the properties now purchased, and various others. The original Madame Berry Company, whose property is about four miles up the stream, has obtained dividends amounting to £855,450, and a further £128,817 has been paid in royalties, while other properties on the system have yielded large sums, the total in dividends and royalties being over £2,750,000. Work already done on the property is said to represent an expenditure of over £55,000, and although the value of the wash cannot be estimated until the water has been exhausted, the probabilities of high payable values are considered very strong. Of the total capital of £250,000 in £1 shares 100,000 have been allotted in payment of the purchase price, and 50,000 are held in reserve, leaving 100,000 to be offered for subscription, half of which have been underwritten by the Consolidated Deep Leads, Limited, in consideration of an option until December 31, 1907, to subscribe at par for the reserve shares and any of the present issue not taken up.

State of San Paulo New Loan.

Messrs. J. Henry Schröder and Co. offer for subscription at 94 per cent. a loan of £2,000,000 for the Brazilian province of San Paulo in the form of 5 per cent. Exchequer bonds to bearer. It forms part of an authorised £3,000,000, the other £1,000,000 having been bought by the National City Bank of New York, but £1,000,000 of the total is to be utilised to pay off a like amount of outstanding provincial Treasury bills maturing in London on August 1 next year. Payments for these new bonds are spread over to the end of May next in easy instalments up to the last two, which amount respectively to 20 and 34 per cent., and the whole loan is repayable by four equal annual drawings, the first of which falls on December 1, 1908, or the bonds may be purchased earlier in the open market at any price below par. The security consists principally

of a surtax of 3 francs per bag of coffee exported, a tax which, had it been in force, would have produced during the last five years an average income of about £961,000. The ordinary revenue from the coffee tax amounted for the same period of time to an average of about £1,505,000 per annum, and it cannot be mortgaged for any purpose until this loan has been paid off. In any case, the credit of San Paulo stands high.

Notes on Books.

Forms and Precedents for the Use of Accountants (Wm. Green and Sons, Edinburgh and London).—This work is evidently intended to be a kind of supplement to that exceedingly useful compilation the "Encyclopædia of Accounting," which was issued by Messrs. Green in 1903-4, and should add considerably to its value. The general editorship is again entrusted to Mr. George Lisle, C.A., F.F.A., who was so successful with the Encyclopædia, but the numerous examples and precedents have been prepared by specialists in each department, and care has been taken to give the explanatory notes and text accompanying them a pre-eminently practical value. A very wide range of subjects has been covered, amongst others being very full descriptions of the forms required by public companies, from the drawing up of the articles of association onwards throughout their whole career.

Considerable space is also devoted to specimens of the books and forms used by banks, as well as by building and friendly societies, and even private traders of all kinds will find plenty of information in the 500 or so pages of which Volume 1 consists. One of the most useful sections in the book is that devoted to income-tax, where the official forms are taken one by one and carefully explained. Illustrations are given and precedents quoted for adjusting accounts for three years on the average system, for assessments of profits based on irregular periods, and for appealing against assessments. Many other points with regard to this tax are clearly set out, and the business man, firm, or company can readily learn how to avoid pitfalls in making the annual return. The headings we have mentioned are only a few of the principal ones dealt with, and by no means exhaust the list, but enough has been said to show the aim and scope, and we can only add that the work seems to have been done very thoroughly.

Bulletins: Financiers et Politiques, 1830-1906. Par C. Herold (London: Effingham Wilson).—Mr. Conrad Herold is a bold man in more senses than one. His political opinions are strong and emitted with emphasis, and almost as emphatic are his prophecies about the course of markets. In a way these various bulletins are therefore reminders of past history, and it is really astonishing to see how often this shrewd jobber upon the Stock Exchange was right in guessing the way the market would go. The earlier bulletins are in French, but latterly he took to writing English, and whether in the one language or the other there is never any mistaking his meaning. It recalls far-off times to read that sanguine spirits predicted a rise of Egyptian Unified to 80. That was in March, 1883.

American Finance. Part I: Domestic, by W. R. Lawson (Wm. Blackwood and Sons; price 6s. nett).—In his preface Mr. Lawson states that he has written specially for American readers, but students of finance and economy on this side will also find much of interest in this volume. After all, to the majority of financiers and financial writers the evolution of American history is an unknown subject, and to many also its present organisation and the possibilities of its further development are things only known in a vague way. The struggle the Republic had in its early days to create an effective currency, the shifts and expedients it was compelled to resort to, not only in the years immediately following the signing of the Act of Independence, but again at different periods up to the close of the Civil War, alone form a most fascinating chapter in the history of modern finance, and one that Mr. Lawson tells well and effectively. And even now the States have not seen the end of their monetary troubles. True, they appear to be at present the wealthiest country in the world, judged either by the standard of aggregate capital or of wealth *per capita* but, as the author points out, much of this superabundant riches is non-effective, and the American money markets, instead of being the easiest and most stable of all, are at present in a state of chronic instability and unrest. With Mr. Lawson's conclusions as to the fate of the American trusts we fully agree, and think with him that in time the American people will tear them out root and branch. We have read the book with great interest, and can advise all who desire to know something of the conditions that govern the American markets, stock and produce, to go and do likewise.

Who's Who. 1907. 10s. nett. *The Who's Who Year Book.* 1907. 1s. nett. (London: A. and C. Black.)

Every year this valuable book of reference grows in bulk, and the new issue just made is 80 pages larger than the one of the previous year. The book needs no description from us, we can only testify to the fact that it is continually in use, and of the utmost value to all who read, who have to deal with public men and public affairs of any description. So also is the "Who's Who Year Book," which is really the expanded tabulated matter that formerly constituted the introductory portion of the "Who's Who" volume. It had to be lifted out because there was no room, and it now forms a separate volume of about 150 pages, packed from end to end with information about great personages of State, Royal Academicians, the Church, clubs, Colonial representatives, House of Commons, barristers, newspapers, public societies and their officials, theatres, university professors, and so on. Not the least useful section is that giving the correct pronunciation of peculiarly spelt names.

MINING NEWS AND NOTES.

**** Frank and unbiassed answers are given to all questions relating to Mines. Address Editor Mining Section and enclose* ONE SHILLING *for each question asked. No bucket shop circular or advertisement should ever be responded to without first consulting the* INVESTORS' REVIEW.

The week opened with the carry-over in the mining market, and as business was again very quiet, dealers had ample leisure to make the usual arrangements. In one or two directions the account showed expansion, not in the South African nor Westralian, but in the Copper, Siberian, and Deep Leads groups, where considerable gambling has been going on. Rates in the old-fashioned markets showed little change from those ruling a fortnight previously, the general charge being 7¼ to 8½ per cent., with a little variation here and there on such favourite counters as Rand Mines, East Randa, Gold Fields, Modderfonteins, and Johannesburg Consolidated. Rhodesians were done at about 7 to 9 per cent., with 12 per cent. on Chartered, and 7 to 9 per cent. was the ruling figure in the Jungle and Westralian departments. Sons of Gwalia were continued at 6 to 8 per cent., and Kalgurlis as high as 9 to 11 per cent. On Deep Leads the rate was 8 to 10 per cent. and on Siberian things 9 to 11 per cent.

The making-up list did not show many serious declines amongst South Africans. Vaal Rivers were the heaviest losers, being 1¼ below the comparison, whilst Premiers lost ¼. Amongst gold shares, Durban Roodepoorts relapsed ¼. Nourse Mines ⅛, Cinderella Deep, Roodepoort United, Wolhuter, and Northern Coppers ¼ each, with ⅛ in Jagers deferred and Robinson Deep. There was really no rise worth mentioning. Amongst Westralians, the only important change was a decline of ¼ in Oroya-Brownhills. Loddon Valleys were ⅛ lower, but Siberian shares were, on the whole, higher. In the Copper group the rises were more substantial than elsewhere. Rio Tintos were by far the most conspicuous, with a gain of £2. Cape Copper preference and ordinary put on 1¼ and 1⅛ each, Anacondas ⅛, and Tharsis 1⅛.

For the new account, which, owing to the Christmas holidays, will run for less than a fortnight, as contango day in mines is fixed for Friday next, business has been on a moderate scale in all sections. Towards the close dealers showed they would mark prices higher on the unexpected dividend from the Modderfontein and French Rand companies, also on the news that successful experiments have been made in the last three months in the Robinson Mine with a new labour-saving drill. So prices look, if anything, a trifle firmer at the end of the week than at the beginning, but as it is

mere marking up, it means little or nothing in the absence of solid business. The following are the dividends declared:—

	Dividend, %	Issued Capitals. £	Amount. £	Approx. Yield.* %
Bonanza	12½	200,000	25,000	90
Robinson Central Deep	40	440,000	176,000	16
Ferreira Gold	150	95,000	142,000	16
Van Ryn	10	500,000	50,000	2⅞
French Rand	5	514,000	25,700	5
Crown Deep	40	300,000	120,000	11⅛
Robinson Gold (£5)	11	2,750,000	302,000	14½
New Modderfontein (£4)	5	1,200,000	60,000	1⅜
Rose Deep	10	425,000	42,500	7
Geldenhuis Deep	20	300,000	60,000	8
Rand Mines (5/-)	60	490,000	294,000	2½
Geldenhuis Estate	40	200,000	80,000	24½
New Kleinfontein	15	900,000	135,000	10
			1,512,200	

* Calculated on the percentage per annum.

The dividends declared by the New Modderfontein and French Rand are the first in their histories, and were not expected so early. The Modderfontein has been in existence since 1888, was reconstructed in 1895, its capital was watered without stint, and in 1905 it came under the management of the Wernher-Beit group. The French Rand is a member of the same family, and is likewise a very old company. Seeing how small the dividends are, dealers were not justified in putting up prices on the strength of them, in the expectation of such payments tempting back the multitude into the market. Gamblers have also been awaiting the promulgation of the Transvaal Constitution, and they have accepted it with equanimity and put the best face on it.

Rhodesians have shaded off, though even they were marked higher at one time, in sympathy with the above-mentioned incidents. After remaining steady, De Beers and Jagers, in the diamond group, have renewed their upward flight. Premier deferred, too, have been firm, but Vaal Rivers have gone down with a rush since the publication of the directors' report. Maybe they will eventually get to a level where we can talk with some reason of intrinsic merits. On actual earnings and immediate prospects they should be several points lower than they are.

Neither the Jungle nor Westralian markets need detain us. In the former the weakest share has been Ashanti Goldfields, depressed by a disappointing report. Westralians are just steady.

There is now much less excitement in the Deep Leads group and in the Siberian gamble, whose prices show a tendency to give way on profit-taking, and in the absence of public support. Indian shares keep firm. At the Champion Reef meeting the chairman spoke rather hopefully of the possibilities of the future of the mine.

Much the most buoyant market has been that for coppers, where Rio Tintos have been flying ahead to heights never before reached. This rush upwards is not justified solely by the rise in the price of copper, but there is obviously constant manipulation going on by the American clique. Anacondas have also gone up, but they are far behind Tintos, whilst other well-known shares are following closely. It is rumoured that a "bear" of Tintos has been cornered or caught short in Paris, or that option dealers are short of the shares, but the price is undoubtedly moving up in a manner indicative of trouble somewhere. On the strength of this movement, obscure shares are fictitiously dealt in, but there is little or no evidence of public dealings in them.

Transvaal Gold Output.—The return for November is a fairly good one, despite the apparent decrease. For the whole of the Transvaal the aggregate was 533,373 ozs. in weight of a value of £2,265,625, compared with 540,609 ozs. and £2,296,361 respectively for October. Thus there were decreases of 7,236 ozs. in weight and of £30,736 in value. On the daily average, however, there was an improvement, the figures being 17,779 ozs. for November against 17,439 ozs. for October, an increase of 340 ozs. per diem, at the rate, say, of 10,200 ozs. per month, which does not compare favourably with the progress in other months. The output includes gold reserves amounting to 11,578 ozs. compared with 14,968 ozs. for the preceding month. In contrast with the return for the corresponding month of last year the increase is, of course, very substantial, viz., 108,616 ozs. in weight, and of £461,372 in value. Natives continue to come forward, for there was a further nett gain of 2,142 against a loss by time expiry and other wastage of 6,919, exclusive, of course, of the blacks employed by the Robinson group.

Sulphide Corporation.—Gross profit for the year to June 30, after debiting to working costs £14,116 for amortisation and providing £16,275 special expenditure due to the creeps, amounted to £157,894. After charging £3,980 for debenture interest, £40,177 for capital expenditure, &c., the nett profit was £94,460 and £04,005 was the sum from the previous accounts, making £188.465. After paying the dividend on the 10 per cent. preference shares £133,465 is carried forward and the ordinary again receive nothing, which is disappointing. This the directors attribute to the creeps in the mine, which have necessitated considerable extra expenditure. Though only 136,172 tons of crude ore were milled against 237,265 the nett profit compares with £52,301 owing to the higher metal prices and the fuller utilisation of the zinc contents. The promise is held out that within the next few months, with the completion of the new mill, the period of heavy capital outlay will cease.

Henderson's Transvaal Estates.—The directors acknowledge that the past year to June 30 was not favourable for the realisation of the company's holdings and for the general development of its business. Income in London from interest, dividends, transfer and agency fees amounted to £26,300 and in Johannesburg to £21,401, total £47,701, yielding a nett profit of £24,720. As £97,404 is the credit brought in the accumulated balance is now £122,124, but it is all carried forward, not divided. Though sundry stocks and shares are valued at £536,888, in addition to which there are 1,249,472 shares held in the Henderson Consolidated Corporation, we do not think much of them in the lump, and it is practically certain they would not fetch anything approaching this aggregate in the market. Most of the companies in which interests are held are in quite primitive stages of development. Cash resources amount to £97,092 and debtors owe £14,867, against current liabilities for under £14,000. The reserve fund is unchanged at £166,761, included, of course, in the various holdings.

Nourse Mines.—Gold won last year realised £481,707; working profit was £148,232, interest gave £2,843 and freehold revenue £390, total £151,466, to be added to £146,762 brought in. Two dividends were paid, of 12½ per cent. each, 25 per cent. in all, and after allowing for taxes and other outgoings, £69,627 is carried forward. Liquid resources amount to well over £200,000. Though working costs were reduced by 1s. 6d. per ton the profit fell off by 4s. 2d. per ton, owing to a lower grade of South Reef, and a larger percentage of Main Reef and Leader mined. Ore reserves are estimated at 1,021,884 tons, of an average assay value of 8.7 dwts.; in addition, 959,602 tons are developed of unpayable value. These reserves represent about three years' supply at the present rate of milling. It is proposed to add two tube mills to the Henry Nourse mill and two to the Nourse Deep, not to interfere unduly with the present rate of dividends. Further financing is to be arranged through the Rand Mines.

Langlaagte Deep.—In the year to July 31 84,150 ozs. were won from 240,406 tons milled, realising £353,416, an increase of 1s. per ton. Total working costs were £274,053, an increase of 1s. 9d. per ton, mainly due to higher expenditure underground. Thus the working profit was £79,363, which interest paid reduced to £77,974, all of which is absorbed in expenditure on capital account, taxes, &c., so nothing is carried forward. Total ore developed was estimated at 1,359,123 tons, of an average assay value of 5.3 dwts., but 526,308 tons of this is unpayable, and the balance of 832,815 tons represents the calculated ore reserves, showing an increase of 59,000 tons. The first dividend is not possible for two or three years at the earliest.

Glen Deep.—The value of the gold won in the past financial year was £309,169, equal to £1 12s. 1¾d. per ton, a decrease of 3s. 11d. per ton. Working costs aggregate £218,107, a reduction of 1s. 9½d. per ton, leaving a gross profit of £91,062, averaging 9s. 5½d. per ton. This lower profit was due to the poorer grade of the ore mined. The South Reef has been opened up in several parts of the mine, but the results are described as not very encouraging. Interest brought in £1,027, and as £46,401 was the balance from 1905 the free surplus is £138,491. The two dividends totalled 15 per cent., leaving 21,978 to be carried forward. Ore reserves are calculated at 436,187 tons of an average value of 7.5 dwts., and 326,127 tons are considered unpayable.

Enterprise Gold Mining and Estates Company.—This Rhodesian company has at last earned a fair looking profit, thanks mainly to the receipt of £5,136 in dividend on the holding of Giant shares—a subsidiary floated in 1903—interest and dividends on other shares £1,603, profit of £12,571 made on the sale of other paper, and two or three hundreds from rents, hut taxes, timber royalties, transfer fees, &c. After allowing for all items of expenditure the nett profit was £15,619. This achievement has so elated the directors that they are eager to pay a dividend, to have something to boast about. Instead of clearing off the previous debit of £9,518, they write off half only, leaving the balance to be dealt with next year. In July they declared an interim dividend of 5 per cent. But the consulting engineer writes rather ominously:—Development to date does not permit me to state definitely that our efforts have proved a mine, but the indications at the New Found Out may be considered encouraging, and a few months' work should decide this." Thus doubts as to immediate and far prospects are justified.

New African Company.—The directors bewail that the company's holdings have, in common with all other Transvaal properties, depreciated in value in the past 12 months, nevertheless they appear to have sold some holdings to advantage. A profit of £16,258 was made on the realisation of something or other, probably paper, and as interest and dividends gave £11,832, the total credit was £28,090. Deducting the usual expenditure, the nett profit was £15,226. We are pleased to see that the directors do not take credit, as they have done in the past, for share appreciations. But what of depreciation? The auditors say the debentures and shares which have a published price show an appreciation in excess of depreciation on the figures in the balance-sheet, while the remainder and the miscellaneous participations, about one-fifth of the total, are taken at the directors' estimate of value. In the books the debentures, bank and railway shares are valued at £116,018, and the mining and other things at £356,728. A sum of £19,386 has been deducted from premiums for further amounts written off in respect of old and new ventures abandoned and shares considered to have permanently depreciated in value. Is this

enough? We doubt it. Of course, no dividend can be paid for the past year, against 7½ per cent. for 1905. But in order to lessen the pangs of disappointment, the directors have declared an interim dividend for the current year of 6 per cent., because, say they, further profits have been realised. The credit carried forward at the end of June was £17,988. Cash is only £3,962, but there are contango and other loans for £40,113, amply covering the current liabilities.

AFRICAN AND EUROPEAN INVESTMENT COMPANY.—The interesting announcement is made by the directors of this large finance company that they have decided to absorb the Transvaal Proprietary, Limited, for the sum of £163,592, to be satisfied wholly in fully-paid shares. In order to provide these it will be necessary to increase the capital to £1,750,000 by the creation of 250,000 shares. The properties to be acquired will consist of 91 freehold farms of a total area of 545,184 acres, situated in various districts of the Transvaal. A special general meeting to consider this matter will be held at the offices in Johannesburg on January 29.

KAMFERSDAM MINES.—Though ten years old this diamond company, whose mines are close to Kimberley, is still working at a loss, and though this was less last year than in the previous year, it is heavy and serious enough. Diamond sales fetched £55,360 and some £325 was received from various sources, but as the expenditure, including depreciation and mine development, took £70,504, the deficiency was £14,818, raising the debit to £72,118. Under these circumstances, with weak finances, the outlook is black. The principal financial resources consist of the balance of uncalled capital of 4s. per share on 97,327 shares, amounting to £19,465, with calls outstanding £5,209. If all this can be gathered in that may defer for a year or so an unpleasant ordeal.

WITWATERSRAND TOWNSHIP ESTATES AND FINANCE CORPORATION.—A cable from the head office announces that in view of the unsettled state of the labour market, and the existing depression the directors have considered it advisable to husband the resources of the company and withhold the dividend for the current half-year. They hope, however, to resume distributions in June next.

KILLARNEY HIBERNIA GOLD MINING COMPANY.—After meeting with fairish success for a time the position of this Rhodesian company is now really serious. The ore reserves are practically exhausted, and the failure to expose any large quantity of payable ore below the second level makes things critical. Shafts have been sunk at different points on the eastern extension of the Killarney, and connected up with the Killarney mine at the prospecting level, but the shortness of the chutes and the erratic values of the ore have discounted the value of the work carried out at this point. The western end of the Hibernia has also opened up in a disappointing manner, the values in the higher levels showing a marked falling off in depth. From this it is evident that the mine is rapidly approaching the end of its life. But its experience is only similar to that of dozens of other Rhodesian mines.

ETNA DEVELOPMENT COMPANY.—As the Etna mine is now sufficiently opened up to justify the erection of a crushing plant the directors hope to commence milling at an early date. No work was done upon it last year, and the tonnage developed to date amounts to 40,000 tons of 9 dwt. ore. Only a balance-sheet is issued. Administration expenses in London amounted to £1,122, and only £90 was the income from transfer fees and interest. Adding to the excess expenditure agency fees and general expenses in Bulawayo, £689; also £1,235 spent on abandoned claims and depreciation, there is at present a deficiency of £6,031. Liabilities are small and cash amounts to £5,488. Shareholders must wait patiently to see how the Etna mine will turn out.

ASHANTI GOLDFIELDS CORPORATION.—"A continued policy of vigorous development, coupled with reasonable conservatism in the matter of output, has resulted in a very considerable improvement in the aspect of affairs, both technically and financially." Thus the directors write in their report for the past twelve months, but the opinion is hardly in accord with facts. We would not doubt that development is being vigorously undertaken, or that conservatism is shown in the matter of output, but we cannot agree that there is any improvement financially. First of all there was a large falling off in the returns. Only 43,734 tons were crushed for a recovery of 30,855 ozs. of fine gold, of a value of £131,346. These compare with 108,924 tons, 41,358 ozs., and £175,990 in the previous year, so there were decreases of 65,190 tons crushed, 10,503 ozs. and £44,644 in value. Nevertheless, the directors show a working profit of £40,454, compared with £25,561, mainly because of "large economies effected in every direction." As £21,237 was brought down the total credit is £61,691, but no dividend is paid, because £60,000 has to be applied in writing off the face-value loss on the vendor shares formerly held by the corporation in the Ashanti Sansu, arising out of the reconstruction of this subsidiary. But the old objectionable policy of charging to premiums what should be debited revenue is still practised, and the directors seem to take much pride in it. In all, £65,117 was so written off, comprising the expenditure on mine's development, on works and buildings, the expenses of the debenture issue, and depreciation. This leaves only £71,335 to the credit of the premium account, which, at this pace, cannot last much longer. When it has all gone what will the directors do? They will have no choice but to charge such expenditure to revenue in the usual way and unless profits very greatly increase losses will necessarily have to be shown. So the question is:—Will profits so increase as to stand these charges and leave a surplus for dividends? Shareholders will have little difficulty in forming their own opinions from a study of the report, and they must acknowledge that such profits look extremely doubtful. The yield of the ore certainly seems to be improving, and the directors are further reducing the working costs, but there must be a limit to the possibilities in these two directions. And it looks as if the revenue must increase by, at least, £90,000 or £100,000, to leave anything like a fair margin for distribution. Assuming such an improvement possible, how many years will it take to achieve it? The monthly output is at the rate of £14,000 from the current production, plus whatever has been available from the treatment of accumulative tailings. Let us assume it raised to £15,000. This will total £180,000 annually, or only £50,000 more than was produced last year and £5,000 more than in the year preceding. Unless, therefore, the monthly returns are raised to £20,000 as a minimum, which looks highly improbable, we cannot see any prospect of dividends. By the issue of £80,000 in 7 per cent. debentures last year the directors have got rid of the bank debt and other liabilities, and managed out of the previous year's profit to wipe out the debit balance, so the financial position certainly looks better, at the expense of creating this debenture debt. It should also be noted that since 1902 until this year nothing was allowed for depreciation of plant and machinery, so the £13,828 now written off premiums has to cover four years. This is certainly not adequate. An undignified kind of squabble has disturbed the serenity of the board-room and the unfortunate shareholders are receiving piles of literature from the two sections asking for their moral and material support. Shareholders will be perplexed as to which side to support, for according to the arguments both sides have very strong cases. Mr. J. C. A. Henderson, who gave his name to the company, is in antagonism with all his colleagues, with the exception of Mr. Alfred Gaussen. The trouble appears to have arisen over the sale of the interests of the company in the Consolidated South Rand Mines Deep. Mr. Henderson considered the time inopportune for such sales, and disapproved of the sale of the vendor shares in the Consolidated South Rand Mines Deep—a cumbrous title, by the way—at a price less than that the company would have received under a liquidation. They were sold to Mr. W. A. Wills, of the Africa Trust, "who was thus in a position to carry out the transaction which we reprobated." However, the sale was effected in spite of his and Mr. Gaussen's protests, and this policy he considers is not morally defensible. The rest of the board issue a lengthy circular, in which they make out a strong case for themselves. We have no desire to take sides in the quarrel, and must leave the issue to the shareholders' own judgment. All we can say is, we never formed a high opinion of the value and prospects of the property over which this unhappy quarrel has arisen.

BONMAHON COPPER MINES.—Considerable interest is being taken in the revival of copper mining in Ireland, the great activity in the metal market giving the stimulus to the opening up of some abandoned properties. In the last week or two much has been heard of the Bonmahon copper mines, in County Waterford, situated some 20 miles from the city. These mines are so ancient, or, rather, the district is, that the Danes mined for the metal, while some of the lodes were worked from Queen Elizabeth's time down to 1730. In 1824 the mines became the property of the General Mining Company of Ireland, and in 1862 a nett profit of £20,000 was made. The company got into difficulties in 1878, owing to which and the low price of copper the work was stopped. During the 41 years in which the mines were worked 191,126 tons of ore were raised, producing £2,320,330, out of which profits and royalties amounting to £543,611 were paid. The Bonmahon Copper Mines Development Syndicate was formed early last year, with a capital of £30,000, for the purpose of acquiring the mines, reopening the works and ascertaining the conditions and value of the ore bodies stated to have been contained therein. In January operations were commenced, and the Bonvy mine has been completely dewatered to a depth of 300 ft., and is equipped with plant and machinery capable of handling an output of 250 tons a day. A little further away the Tankardstown shaft is being pumped out, and the mine has been dewatered to a depth of 350 ft. A week or so ago a large number of mining experts and members of the English and Irish Press paid a visit to the mines, and according to all accounts were greatly impressed with their possibilities.

SAN FRANCISCO DEL ORO MINES.—Only now have the directors issued their report for 1905, the excuse for the delay being that they wanted to select definite results from the development work at the mines and from the experiments carried on for the purpose of selecting the best method of treating the ore. Such a plea is not, however, very satisfying, for all these matters could have been dealt with in a later, supplementary report. In the 12 months sales of ore, bullion, transfer fees, &c., brought in £47,501, the expenditure in Mexico was £18,580, and in London £3,081, leaving a profit of £25,880. A sum of £24,390 was brought in, raising the total to £50,271. Out of this £25,000 has been appropriated for depreciation, leaving £25,170 to be carried forward. The directors have under consideration various offers of a process and plant for the treatment of the ore. A cable has been received from the manager confirming the recent news of the striking of a rich body of ore, and of a permanent water supply.

CASSEL CYANIDE COMPANY.—The accounts for the year to September 30 show a credit balance of £30,085, out of which

the directors place £3,375 to reserve, and after paying 25 per cent. on the shares—inclusive of a bonus of 5 per cent.—carry forward £4,679. The works of the company were kept fully employed during the year, and while the average price realised was rather lower than in the preceding year, this was met by economies in production. In their report for 1900 the directors mentioned that they had entered into a working agreement with the Castner-Kellner Alkali Company, which they believed would be of mutual benefit. They announce that the agreement has been extended for a further period, and that additional works for the manufacture of one of the raw materials of the industry have been erected at Wallsend-on-Tyne, on joint account, and are now in operation.

Great Lucknow Consols.—The directors have been trying to find a way of financing the company without resorting to reconstruction. They have," so they say, "succeeded in evolving a scheme which, if carried out and responded to in the manner anticipated by them, will enable the necessary further developments to be carried out." Quite so, but the scheme does not look alluring to anyone who knows the value of money. It is proposed to subdivide 150,000 of the unissued 5s. shares into 750,000 preferred ordinary 1s. shares, which are to be entitled to 50 per cent. of the nett profits, and that the remaining 50 per cent. shall be divided amongst the ordinary and preferred ordinary. It is plain that the directors have tried to make these shares look as tempting and cheap as possible, but we would not buy them at a penny apiece.

Mount Zeehan (Tasmania) Silver-Lead Mines.—Higher prices were realised both for lead and silver in the financial year ending June 30, with the result that nett profits reached a total of £33,099. Interim dividends of 9d. per ordinary and 2s. 9d. per preference share were paid in July last, and final distributions of like amounts are now announced, leaving balances of £317 and £4 to be carried forward to the credit of each class of share. Although no ore body of a distinctly rich character has been met with it is believed that the ground opened up will, as a whole, yield a fair profit on stoping. This relates to the Silver Queen Extended section. At the Silver Spray section development has been energetically pushed on, and much useful work accomplished. But prospects have a rather uncertain look.

Boston Consolidated Copper and Gold Mining Company.—The accounts for the past year to September 30 show a balance to the credit of the profit and loss account of the American company of $555,712, of which $256,309 represented the profit on the year's working, and the remainder the sum brought forward from the previous year. No profit and loss account is issued by the English company, in whose balance-sheet the administration expenses amounted to £2,858 against only £372, received solely from transfer fees. The year's deficit, therefore, increases the debit to £12,197. Mr. Newhouse states that four new ore deposits have been disclosed during the year on the sulphide side of the property, and that a much greater amount of ore could have been shipped to the Garfield Smelting Company if the Rio Grande Western Railway had been able to give the American company the necessary car accommodation. Arrangements, however, are being made to move the larger tonnage which the mine has been prepared to supply for months past. The company owes very little, and has £144,705 in cash and short loans.

Corporation of Western Egypt.—This is the second annual report of the directors, and according to the balance-sheet £4,452 was received in the year to September 30 from interest, dividends, transfer fees, and profit on sale of shares. As general expenditure absorbed £10,510, there was a deficit of £6,057. The directors consider the results attained so far evidence the "high intrinsic and economic value of the rights possessed by the Corporation, and are confident that the measure of progress recorded will be regarded by the shareholders as satisfactory." They may be so regarded, of course, but it must be admitted it will be a long time before the company can hope to cover expenditure by revenue. In the completion of the railway and other work, a vast deal remains to be done. What has been accomplished so far opens out many prospects of a successful enterprise. In order to complete the railway to Khargeh as early as possible in the coming year, and to cope with the work of land reclamation on a large scale, arrangements are being made for the early issue of the balance of the capital.

Stratton's Independence.—Sales of ore in the year to June 30 realised £256,726, of which £37 only was on the company's account, and the rest on lessees' account, the total amount of shipping ore being 32,499 tons. After allowing for freight and treatment the nett value was £190,661, of which £120,358 was paid to the lessees as their proportion, the difference of £70,302 being the total of the royalties and percentages of profits retained by the company. Adding other income and deducting the mining and general expenses, &c., the profit of the year was £47,028, out of which £3,267 is allowed for the Cassel process expenditure and £7,080 for depreciation, leaving £36,681. Three dividends of 6d. per share each were paid during the year, absorbing £75,000, and after providing for these the balance carried forward is £25,090. The result of Mr. Schroter's examination of the dump and the low grade ore in the mine is that he, with the manager, contemplated the erection of a mill for the treatment of such ore. But the directors regret that he has resigned as consulting engineer, so they have appointed Mr. Philip Argall to the position. He is studying the problem, and has been requisitioned to send in his report as soon as he can advise fully on the proposed milling scheme. And the future will depend upon the success of this.

NEXT WEEK'S MEETINGS.

Monday, December 17.

Adelaide Electric Supply.—Finsbury Pavement House, noon.
African Lakes Corporation.—Glasgow, noon.
Burma Railways.—Winchester House, 12.30 p.m.
Chaffers Gold Mining.—Winchester House, 2.30 p.m.
Commercial Bank of Scotland.—Edinburgh, 2 p.m.
Egyptian Gold and Gem Syndicate.—Winchester House, 2.30 p.m.
Kelantan Gold Dredging.—Winchester House, noon.
Metropolitan Gas Meters.—Winchester House noon.
New African Co.—Cannon Street Hotel.—12.30 p.m.
United Rhodesia Gold Fields.—Winchester House, noon.
United African Lands.—Institute of Chartered Accountants, noon

Tuesday, December 18.

Army and Navy Investment Trust.—Winchester House, noon.
Barnagore Jute.—28, Fenchurch Street, noon.
Bengal-Nagpur Railway.—Gresham House, noon.
Boston Consolidated Copper and Gold Mining.—Winchester House, noon.
India-Rubber, Gutta-Percha, and Telegraph Works.—106, Cannon Street, noon.
Ingall, Parsons, Clive, and Co.—Birmingham, noon.
Imperial Bank of Persia,—Cannon Street Hotel, 12.30 p.m.
London Woollen.—Cannon Street Hotel, noon.
Madras Railway.—1, Broad Street Place, 2.30 p.m.
Mysore West and Mysore Wynaad Gold Mining.—Winchester House, noon.
New Gold Coast Agency.—Cannon Street Hotel, noon.
New Pegamoid.—144, Queen Victoria Street, noon.
Pacific Nitrate.—Winchester House, 11 a.m.
Palmer Tyre.—106, Cannon Street, 2 p.m.
R. and J. Pullman.—Winchester House, 3 p.m.
Santiago Nitrate.—Winchester House, 12.30 p.m.
San Francisco del Oro Mines.—Winchester House, noon.
Tricolor Nitrate.—Winchester House, noon.
Yenisei Copper.—Broad Street Place.

Wednesday, December 19.

Bartholomay Brewing.—Winchester House, 12.30 p.m.
Buluwayo Syndicate.—Winchester House, noon.
British Exploration of Australasia.—Winchester House, noon.
Cold Storage Trust.—Winchester House, 12.15 p.m.
Caledonian and Australian Mortgage and Agency.—Edinburgh, noon.
East Indian Railway.—Cannon Street Hotel, 1 p.m.
East India Distilleries and Sugar Factories.—Cannon Street Hotel, noon.
Island Trading Syndicate.—Winchester House, 12.30 p.m.
Kamfersdam Mines.—Winchester House, noon.
Karabournon Mercury Syndicate.—5, London Wall Buildings, 2.30 p.m.
Koniah Mercury Syndicate.—5, London Wall Buildings, 2.30 p.m.
Pusing Lama Tin Mines.—Salisbury House, 2 p.m.
Sydney Harbour Collieries.—Winchester House, 3 p.m.
South American Exploration.—11, Cornhill, 3.30 p.m.
South American Land.—River Plate House, 11.30 a.m.
Stratton's Independence.—Cannon Street Hotel, noon.
South African Supply and Cold Storage,—Winchester House, noon.
Sulphide Corporation.—Winchester House, noon.

Thursday, December 20.

Axim Mines.—Cannon Street Hotel, 2 p.m.
American Investment.—Winchester House, noon.
Borsf Light Railway.—Winchester House, noon.
Bibiani Gold Fields.—Great Eastern Railway Hotel, 2 p.m.
British Dredging Company.—Cannon Street Hotel, 11.30 a.m.
Beeston Brewery.—Winchester House, 3 p.m.
Copiapo Mining.—Winchester House, 11 a.m.
Cleveland Bridge and Engineering.—Darlington, 3 p.m.
Chilian Exploration and Development Syndicate.—Cannon Street Hotel, 12.30 p.m.
Delhi Umballa Kalka Railway.—Winchester House, noon.
Mabira Forest (Uganda) Rubber.—Winchester House, noon.
New Belgium Transvaal Land and Development.—Cannon Street Hotel, noon.
Peruvian Corporation.—Great Eastern Railway Hotel, 2 p.m.
Transvaal Exploration.—Winchester House, 3.30 p.m.

Friday, December 21.

Brett's Patent Lifter.—Coventry, 11 a.m
Johannesburg Gold Fields.—Winchester House, noon.
London and Hull Soap Works.—Cannon Street Hotel, noon.
National Bank of Scotland.—Edinburgh, 2.30 p.m.
Zambesia Exploring.—Winchester House, noon.

Parr's Bank.—Liabilities on current and deposit accounts, &c., on November 29 amounted to £27,484,204, and on drafts current, acceptances on behalf of customers, &c., to £3,614,481, against which cash in hand and at Bank of England stood at £4,493,231, money at call and short notice £4,770,885, Government and other first-class securities £3,498,306, bills of exchange £3,004,682, and loans and advances to customers £14,885,171.

London and Westminster Bank.—Liabilities on December 1 consisted of current accounts and deposits £26,341,001, acceptances and endorsements £1,211,409, and other liabilities £790,563, against which there were cash in hand and at Bank of England £3,621,777, money at call and short notice £5,693,150, Imperial Government securities £3,885,000, bills discounted, loans, &c., £16,745,961, and other securities £1,385,676.

Letters to the Editors.

SIRS,—Much attention is at present being drawn to a scheme to supply the Witwatersrand gold mines with electric power generated at the Victoria Falls. As I have had occasion to investigate this matter on behalf of the Rand Central Electric Works, Limited, and as the matter is one having considerable public importance, I should like to communicate to you some of the conclusions at which I have arrived, and the directors of the works have authorised me to do this.

First, as to the amount of power which is required in the Rand: The total horse-power in the mines on the Rand is officially given as about 230,000. Of this, however, about half is used in mines whose probable life does not exceed 15 years, and therefore may be left out of account. Of the remainder about 25 per cent. is used at present in the form of compressed air at the faces, where it is unlikely that the electric will supersede the pneumatic system; of what is left something like 12,000 horse-power is already electrical, so that the total possible future market in the Rand, so far as can be seen, is about 75,000 horse-power. Considering the large capital expenditure required for electrification, and the varying views of mining engineers as to the extent to which it is feasible to use electricity in the mines, it will be seen that a total of 50,000 horse-power represents a somewhat sanguine estimate, and that the preliminary amount of 20,000 horse-power now being spoken of as a small first instalment really represents a fairly large proportion of the possible demand.

The Victoria Falls scheme is to start with the erection on the Rand of an ordinary steam station on modern lines, containing about 20,000 horse-power in boilers, steam turbines and dynamos. This, of course, would be in itself a reasonable and proper scheme if it is not to be grossly over-capitalised. But although it may be shrewdly suspected that this station, if it were ever constructed, would be the end as well as the beginning of the enterprise, I am bound to assume, at least on paper, that the scheme for which the public is to find money is something enormously greater.

First of all, then, comes an ordinary 20,000 horse-power steam station. Next a huge low level reservoir with electrically driven pumps to utilise a part of the power coming from the Falls for pumping water into a second reservoir 600 ft. above the first. Then pipe lines coming down again connected to separate turbine-driven electrical plant, again of 20,000 horse-power, so that at this stage we have 40,000 horse-power of dynamos, 20,000 horse-power of steam plant and the same of turbines, and 6,000 horse-power (more or less) of electric motors and pumps, two reservoirs each of about 20 million gallons capacity with their dams, &c., and two high-pressure pipe lines, all for a gross delivery of 20,000 horse-power to the mines.

The reservoirs are to be large enough to contain water for driving the 20,000 horse-power turbine plant for 12 hours continuously in case of breakdown. This hydraulic arrangement, according to Mr. Wright, enables an interruption of more than 12 hours of the transmission line to occur before the steam reserve station need actually be put to work," so that it "renders unnecessary the very heavy cost of keeping the reserve station always under steam throughout the year." Further, Mr. Wilson Fox says that the erection of a steam reserve station on the Rand "is a *sine qua non* demand on the part of the mine-owners," at which I am not at all surprised.

Then, in addition to the plant which I have mentioned, the complete scheme provides that each 20,000 horse-power at the Rand must have (*a*) about 30,000 horse-power of turbines, dynamos and transformers at the Falls, (*b*) 700 miles of high tension transmission and (*c*) 20,000 horse-power of transformers, &c., at the Rand. It strikes one as rather "a large order" to have to provide about 70,000 horse-power of dynamos alone, and 50,000 horse-power of turbines, not to mention the 700 miles of transmission line, the steam engines, reservoirs, pumps, pipe lines and so on, for the sake of 20,000 horse-power on the Rand itself.

And it must be noticed that this is not only just at the start, for if Mr. Wilson Fox's statement which I have quoted above is correct, the power of the steam station, the power of the turbine plant and the 12 hour capacity of the reservoirs must always be kept equal to the capacity of the transmission from the Falls. When the latter, therefore, comes to 50,000 horse-power, there must be a 50,000 horse-power steam station, reservoirs to supply 50,000 horse-power for 12 hours, a turbine-driven plant also of 50,000 horse-power and so on! I can hardly imagine that the effect of this triple system upon the capital cost, and therefore upon the capital charges, has been seriously considered by the promoters, but I trust the public will consider it very seriously indeed.

As a matter of comparison, and as showing what the real financial magnitude of the business is on a proper commercial scale, it is interesting to notice how the Rand Central Electrical Works, who are *not* asking the public for any capital, are situated, now that they are extending their plant on modern lines with the intention of supplying cheap power on a large scale. They possess an excellent site near the coalfields, where they are now obtaining coal under 10s. a ton; they have a 12,000 volt transmission line already erected along the Rand, they have long ago obtained full power to supply the mines wherever current is required, and they also have acquired the right to put up a new transmission line along the Rand, at 50,000 volts, for power purposes. The total cost of extending the Rand Company's present plant by an amount of 20,000 horse-power and putting down the corresponding transmission lines along the Rand is estimated at under £400,000, and tenders for the first section of the plant are at present under consideration. The total cost of this plant will therefore be about £20 per horse-power, and the whole capital charges upon it, allowing for interest at 6 per cent. and for ample depreciation, will not exceed 0.15 pence per unit sold to the mines.

The total cost of the Victoria Fall Power Company's complete triple system cannot be less than £100 per horse-power. The capital charges alone on this will amount to about 0.80d. per unit. As power must be sold for something under 1d. per unit, it is obvious that practically the whole price is swallowed up in capital charges, before anything whatever is put down for working, maintenance and management, including the "proper patrolling" of 700 miles of veldt and the "sufficient number of breakdown gangs!" Besides all this, I understand that £1,000,000 in ordinary shares is to be paid for the Victoria Falls concession. As the interest on this sum at 5 per cent. would much more than pay for the whole of the feed water for 50,000 horse-power at a steam station at the Rand price of 3s. per 1,000 gallons, it is also not easy to see where the boasted saving, in this item at any rate, comes in.

I do not wish to take up your space with any discussion of technical details, although on such points there is much to be said which differs from the statements which have lately been going the round of the papers. But I write this in the hope that an engineer's view of the hopeless finance of the scheme, apart altogether from its special engineering difficulties and possibly fallacies, may perhaps prove a useful counteractive to the fascination which anything sufficiently big and sufficiently distant seems to exercise on the public.

I hope that some day the enormous energy available from the Victoria Falls may be fully utilised (no doubt in the neighbourhood of the Falls, as with Niagara) to the great advantage of the world in general and of South Africa in particular. But I am very sure that the present scheme is not one which can ever yield any profitable return.

I remain,
Yours faithfully,
ALEX. B. W. KENNEDY.

17, Victoria Street, Westminster, S.W.,
December 11, 1906.

RAND CENTRAL ELECTRIC WORKS.

Sir,—With reference to a statement contained in a letter from Mr. Wilson Fox, dated the 10th instant, that the Rand Central Electric Works, Limited, had made statements during the last six months that it was placing orders, and that so far nothing had happened, I am instructed to say that an order for turbo generators of a total capacity of 7,500 horse-power has been placed by the Rand Central Electric Works, Limited, with my company.

I am, sir, your obedient servant,
W. H. Stafford, Secretary.

TRADE AND PRODUCE.

Wheat.—Farmers continued to offer English wheat very sparingly and as a result of this reticence the tone keeps firm. At a few markets higher prices were asked and in some instances values favoured sellers, but there is little real difference in the conditions as holders of foreign wheat have not followed the lead set. The colder weather stimulated sales a little, but business is rather slow and active markets are not very probable this side of Christmas unless the weather should change for the worse. Farmers' deliveries for the week were 63,264 qrs. against 82,752 qrs. last week, and for the season to date 1,005,399 compared with 1,305,886. Crop conditions on the Continent are generally satisfactory, and accounts from Roumania and Russia are fairly favourable. There are also good reports from Argentina and the growing wheat in America is doing well. Indian advices are of a somewhat mixed character and the position in Australia is said to be less favourable. The imports into the United Kingdom in the past week were 386,423 qrs. against 353,756 last year, making the total for the season 5,816,252 against 5,948,396. Dornbusch estimates the quantity of wheat and flour on passage to the United Kingdom at 1,935,000 qrs. against 2,010,000 a week ago, and to the Continent 1,750,000 against 1,520,000. The London cargo market was fairly firm and holders were not only quoting late prices but were inclined to raise them. Buyers, however, came forward very slowly and only small sales resulted. The American Government crop report shows that next year's yield of winter wheat will be about 503,475,000 bushels, but this had little influence on the markets on the other side and trading there has likewise been rather slow. A better weather map and some local selling led to fairly free offerings but the quantities were soon absorbed and the appearance of covering orders rather turned the market. Western news was generally bullish and private cables from the Argentine report that harvesting was being interfered with by rains. Bradstreet's estimate was also considered a bull point the quantity in sight east of the Rockies being 78,378,000 bushels against 76,000,000 bushels last week, and 61,694,000 last year.

Wool.—Users still get little or no relief from topmakers. Actual business is reported to be better, and there has been a much more general inquiry for home-grown wools during the past week and the turnover is much above the average for the time of the year. December has the reputation for being one of the quietest months of the year, but it looks as if it will belie its reputation. Repeat orders are being driven out more freely. Drapers' and merchants' stocks are so low that an increased demand by the public gets to the manufacturers almost immediately. Owing to the price of wool, the general outlook cannot be considered promising, for the advance in price the manufacturers are getting is far short of the rise in the value of wool.

Linen.—Business continues very good, especially in Belfast, where spinners still control the position, and as spindles are engaged for the best part of next year, they can afford to hold for their own terms. So far the high prices do not appear to have had any effect on demand, buyers being willing to pay if only they can make sure of delivery when wanted. The satisfactory state of the export trade both for the South American and United States markets is well maintained.

Cotton (from our Manchester correspondent).—Our market during the week under review has been considerably disturbed by the fluctuations in American cotton in New York and Liverpool. As a result of the figures issued by the United States Government a big drop in values occurred on Wednesday. This led to buyers of cloth and yarn holding aloof, and although the amount of business passing at the moment was important, a quiet tone has prevailed during the last few days, and operators are waiting for a more settled feeling. The outlook for the American crop has improved, and the prospects are now for a large yield. There is some doubt, however, as to what extent the growth will be of cotton suitable to meet the needs of users in Lancashire. Already the number of "points on" to be paid for desirable grades is very great, and spinners say that the official quotations in Liverpool are nothing to go by. A miscellaneous inquiry in piece goods has been dealt with, but few lines of weight have been entered. Considering the absorbing powers of India, the business is on a comparatively small scale. Buyers seem to be afraid to purchase with any freedom, and with the fluctuations which keep occurring this can be understood. China buyers have continued to look on, and with the exception of occasional lots in fancy goods, hardly anything goes through. The Mediterranean outlets provide a fair inquiry in a miscellaneous class of cloths, but buyers and sellers have difficulty in getting to close quarters. It would seem that greater steadiness will have to show itself before exporters can enter the market freely. T-cloths and Mexicans remain generally firm, owing to engagements. Burnley goods remain dull, and the margin is poor compared with a few months ago. Dhooties move off slowly, the offers being poor. Producers of good shirtings will soon be wanting new business. Home trade goods are generally quiet in demand, but distribution is fairly satisfactory. American yarns for home use have met with a comparatively small trade. Users are not stimulated to purchase for more than passing wants. Spinners are scarcely selling their production at the moment, and this state of things must ultimately tell upon prices. Shipping yarns have continued quiet, the offers being too low for producers, although the question of delivery has restricted operation in some quarters. Bolton spinnings are dearer on the week, and spinners have again met with a healthy trade. Order lists are in most cases extensive, and spinners close very strong.

Cotton in the New York market opened at 1 to 3 points lower and further weakened. But a sharp recovery sent prices 7 to 12 points up. On Tuesday there was a heavy relapse on the publication of a bearish Agricultural Bureau estimate, prices dropping to the lowest of the season. Later the market rallied on strong buying, but it closes barely steady.

Coal.—With the advent of colder weather the market has become more animated; therefore more in favour of producers. Consequent upon an increased retail demand, prices have advanced. There has been a stronger market for seaborne and best is now quoted 17s. 6d. and seconds 16s. 6d. Steam coals are in fair request and the Welsh market keeps firm. Prices are:—Best Admiralty, large, 16s. to 18s. 6d. f.o.b. Cardiff; Durham unscreened bunkers, 10s. 6d. to 11s. f.o.b.

Copper.—It is said that all the leading producers are sold out until the end of March, and the Calumet and Hecla even until May. The demand all round is large, and the fact that the Amalgamated Company has made large sales for March and April shipments at relatively low prices has compelled it to close its books for March and to advance prices for April. Business this week commenced at a substantial advance, with good inquiries for forward delivery, and the initial rise was soon carried further by higher American advices, coupled with a good demand from consumers. Bear covering was also in evidence, and the market was very buoyant, the leading producers making good sales at best prices. Business became a little quieter near the end, but prices scarcely receded, the figures being £105 15s. for cash and £106 15s. for three months.

Tin.—Owing to the enormous pressure for structural material and steel rails, the United States Steel Corporation have shut down some of their tin-plate mills with a view to liberating the raw material and labour for the purposes of the ordinary steel business. The demand, however, for tinplates remains as large as ever, and orders for this commodity are transferred to the English manufacturers, whose industry is in a flourishing condition. On strong Eastern cables business was active, with bears covering freely and moderate purchases forward. A reaction followed, the bears operating with some success, but after a little irregularity, the tone was good again, with prices at £196 17s. 6d. for spot and £196 5s. for three months.

Iron and Steel.—There are no signs of abatement in the activity of the iron and steel markets. The demand for all kinds of iron, particularly for pig-iron, is as strong as ever; indeed, many declare it to be stronger. Even though the current supplies are great, consumption is likely to overlap them, threatening an early and large reduction in the visible supply in this country, and the driving up of prices. Both the United States and Germany are still keen buyers, their requirements being far from satisfied. In fact, there are no signs of any early falling off in the demands from the Continent and America, whilst it is said that American smelters have been paying premiums to secure supplies over the whole of next year, and even into 1908. All kinds of finished material have responded to the strength of pig-iron. Buyers of every variety have been encouraged to give out orders in anticipation of needs, also in the covering of open contracts, and this has justified the action of manufacturers in raising their selling prices.

Rubber.—In the past fortnight the market for Para was fairly active, with sales of hard core fine spot at 5s. 2d., old 5s. 3½d., and soft core fine at 5s. 0¾d. Owing mainly to a good demand from America the stock in Liverpool has been considerably reduced. Towards the close of last month receipts arrived rather freely in Para, and buyers seem inclined to hold off the market. The statistical position for spot, says W. J. and H. Thompson's circular, is strong, but with the probability of larger receipts arriving during the next few months it would not be surprising to see easier prices ruling in the near future.

Tea.—The commoner qualities of Indian tea again marked a sharp advance, ordinary black leaf being now worth 5d. to 5½d. per lb., with a decided tendency towards the higher figure. Other teas up to about 8½d. were also firm, as well as those over 1s., but intermediate grades were, if anything, slightly easier, and Messrs. Gow, Wilson, and Stanton quote the average for the week at 7.97d., compared with 8.06d. last week, and 6.99d. for a year ago. Ceylon teas were also strong, with common kinds a trifle dearer, and some recovery in the better classes, but the average worked out a trifle lower at 8.66d., against 8.79d. a week ago, and 7.71d. in 1905. All Java teas were in good demand, and lower priced kinds were again dearer. It is announced that the final sales for the current year will take place on the 17th inst. for Indian, and on the 18th for Ceylon, and that public auctions will not be resumed until January 7.

Sugar.—The price of May further declined from 9s. 5d. to 9s. 1½d. since Thursday of last week, in sympathy with slightly weaker quotations from New York, which were regarded as a forecast of a larger Cuban production than was previously expected. The present grinding commenced sooner than usual, but only with a limited number of factories, and if 180 centrals in the height of the season have a monthly capacity of 250,000

tons, it follows that one-third of their number working an additional month can only work an additional limited quantity, probably with inferior results, as the cane does not fully mature till later. Besides, there have been interruptions by adverse weather, and Willett and Grey still adopt a figure of 1,250,000 tons, which, with the want of labour, seems reasonable, and in view of the serious deficiency in Louisiana, as well as reduced stocks, holders as yet should have no legitimate grounds for alarm, says Mr. Czarnikow, especially in the face of the present level of values. It must likewise be borne in mind that the New York quotation at this season of the year is by no means a true indication of the Cuban crop; planters must at the beginning of the campaign sell large quantities for want of store room, and to provide money. Besides, in the early part of the crop sugar is produced quicker than it can be absorbed by the American refiners, and with so many producers in Cuba, and only a limited number of buyers in the United States—a condition of affairs totally different to that which obtains in Europe—it is quite natural that there may at times be pressure of actual sugar apart from the ultimate yield.

Answers to Correspondents.

C. B. U.—(1) The outlook for this company is far from cheerful, and we doubt the wisdom of adding to your holding, but you might keep what you have for the present, at any rate. (2) This undertaking also is in such a bad way that we can only see one end—reconstruction, and that at no very distant date. With both the securities your best plan would undoubtedly be to take the first opportunity afforded by a recovery in price to cut your loss.

NAMELOC.—We know of nothing to affect this stock beyond a recrudescence of the scare about "wireless" competition.

G. E. J.—A good enough investment. There might be some risk of a loss of capital should the line be taken over, but the Government has no powers of compulsory purchase, and the contingency of any agreement being come to is so remote that you may safely disregard it.

I. F.—(1) Sorry to say we never heard of the firm. (2) No, certainly not. The terms appear to be excessively costly. (3) The first of the three offices given is probably the one you would be induced to enter, and we would not trust it with sixpence. Both the others are good.

W. J.—Please read our rules. You ask at least five questions, and pay for one. Of the banks named, the two in the East are the best. Kindly send the latest reports of the local companies if you wish to be advised about them.

W. B. J.—See pages 695 and 789 in January-June volume of this year. The company has squandered its policy-holders' money, and we fear you have no remedy.

W. P.—(1) It would not be worth while to buy shares for the purpose you mention. The value of the "rights" is included in the present price, and will be duly deducted later on. (2) Conditions in the country are still very prosperous, and as the yield at present price is 5½ per cent. the stock possesses some attraction. Capital outlay, however, is enormous, so buy sparingly. (3) We think rather well of this security, but a possible fall in the value of silver, which would affect the exchange value of the coupon, must not be overlooked.

Sandagar.—(1) Should not be touched at present, as there is nothing definite settled with the Government of the country, whose poverty is notorious. (2) On the whole, we prefer "b," although the other looks a strong institution.

INDIAN GOLD MINES.

The output from the Indian gold mines for the month of November amounted to 45,307 ozs., a decrease of 634 ozs. compared with October, but seeing that the month was shorter the difference is actually very slight. Still, it is a poor return compared with the preceding months, and is 5,500 ozs. below the yield for the corresponding month of 1905.

Name of Company.	August. Tons.	August. Ozs.	Sept. Tons.	Sept. Ozs.	Oct. Tons.	Oct. Ozs.	Nov. Tons.	Nov. Ozs.

Treasury, December 11 1906.

Mr. Edward T. Dames Longworth, J.P., D.L., has accepted a seat on the board of the Corporation of Western Egypt.

RAILWAY TRAFFIC RETURNS.

Foreign.

Alberta Railway and Irrigation.—Earnings for week ended December 7, $3,815, decrease $598.

Argentine North Eastern.—Traffic receipts for week ended November 9, £1,960, increase £223; aggregate from January 1, £77,731, increase £7,121.

Assam Bengal.—Traffic receipts for week ended November 10, Rs. 97,941, increase Rs. 13,208; aggregate from July 1, Rs. 17,23,335, increase Rs. 3,48,259.

Canadian Northern Railway.—Traffic receipts for week ending December 7, $125,500, increase $27,800; total from July 1, $3,506,200, increase $1,153,100.

Lucknow Bareilly Railway.—Traffic receipts for week ended November 10, Rs. 28,800, decrease Rs. 165.

Quebec Central Railway.—Traffic receipts for the 1st week of December, $11,833, increase $1,934; aggregate from January 1, $855,089, increase $108,760.

Rohilkund and Kumaon Railway.—Traffic receipts for week ended November 10, Rs. 25,967, increase Rs. 16,705.

White Pass and Yukon Railway.—Traffic receipts for the week ended November 7 amounted to $4,600.

English.

Cleator and Workington Junction.—Receipts for week ending December 8, £1,425, increase £150; aggregate from July 1, £28,693, increase £838.

Cockermouth and Keswick Railway.—Receipts for week ending December 8, £616, decrease £103; aggregate from July 1, £21,314, increase £304.

East London Railway.—Traffic receipts for September, £4,002, decrease £374.

East and West Yorkshire Union Railways.—Traffic receipts for the week ending December 8, £410, increase £17; aggregate from July 1, £8,275, increase £241.

TRAMWAY AND OMNIBUS RECEIPTS.

Home.

Bath Electric.—Traffic receipts for week ending December 5, £644, increase £29; aggregate from January 1, £40,339, increase £6,893.

Blessington and Poulaphouca.—Traffic receipts for week endi December 5, £9, increase £2; aggregate from July 1, £554, increase £46.

Bristol Tramways and Carriage.—Traffic receipts for week ending December 7, £4,544, decrease £161; aggregate from July 1, £120,415, increase £5,173.

British Electric Traction.—Receipts of all the Associated Companies for the week ending December 7, £26,857, decrease £1,238; total increase from January 1, £119,216; 435¼ miles, against 440¾.

Burnley Corporation. — Traffic receipts for week ending December 8, £1,090, increase £3; aggregate from July 1, £27,989, increase £2,262.

Dublin and Blessington.—Traffic receipts for week ending December 5, £102, increase £8; aggregate from July 1, £3,523, increase £218.

Dublin and Lucan.—Traffic receipts for week ending December 7, £93, increase £1; aggregate from July 1, £2,890.

Dublin United.—Traffic receipts for week ending December 7, £4,662, decrease £107; aggregate from July 1, £122,354, increase £6,156.

Edinburgh and District.—Traffic receipts for week ending December 8, £4,542, decrease £53; aggregate from January 1, 1906, £242,407, increase £5,343.

Hastings and District. — Traffic receipts for week ending December 6, £559.

Isle of Thanet.—Traffic receipts for week ending December 8, £224, decrease £5; aggregate from October 1, £3,099, increase £260.

London County Council.—Traffic receipts for week ending December 1, £25,956, increase £12,601; aggregate from April 1, £921,580, increase £400,918. Miles 111½, against 51.

London General Omnibus.—Traffic receipts for week ending December 8, £20,224, decrease £1,384; aggregate from July 1, £524,214, decrease £6,615.

London Motor Omnibus (Vanguard).—Traffic receipts for week ending December 8, £4,483, increase £2,822.

London Road Car.—Traffic receipts for week ending December 8, £7,153, decrease £425; aggregate from July 1, £181,134, increase £3,485.

London United.—Traffic receipts for week ending December 7, £5,213, increase £678; aggregate from January 1, £303,220, increase £26,463.

Rossendale Valley.—Traffic receipts for week ending December 7, £184.

Yorkshire (West Riding) Electric.—Traffic receipts for week ending December 9, £997, increase £171; aggregate from January 1, £42,264.

Foreign.

Anglo-Argentine.—Traffic receipts for week ending December 9, £17,814, increase £2,090; aggregate from January 1, £748,509; increase £87,617.

Brazilian Street.—Traffic receipts for the month of January, Rs. 43,391, increase Rs. 303. Total receipts from August 1, 1903, Rs. 2,47,609, increase Rs. 3,737.

Brisbane.—Traffic receipts for month of October, 1906, £11,721, increase £1,371.

British Columbia Electric.—Nett earnings for Oct. $55,159, increase $13,169. Nett earnings, including income from investments, from July 1 to October 31, $224,997, increase $40,699.

Buenos Ayres and Belgrano.—Traffic receipts for the week ending December 9, £4,129, increase £724; aggregate from January 1, £179,532, increase £9,804.

Buenos Ayres Electric. — Traffic receipts for week ending November 3, £2,017, increase £338; aggregate from January 1, £60,712, increase £9,035.

Buenos Ayres Grand National and New Tramways.—Traffic receipts for month of November, £28,810.

Calcutta. — Traffic receipts for week ending December 8, Rs. 51,477, increase Rs. 5,841; aggregate from July 1, Rs. 10,53,053, increase Rs. 62,249.

Cape Electric.—Traffic receipts for month of October, Cape Town, £11,276; Port Elizabeth, £3,199.

Cartagena (Colombia).—Traffic receipts for September, £10,646

Carthagena and Herrerias.—Traffic receipts for the month of November, £5,248, increase £2,618. Total from January 1, £47,021, increase £15,943.

Kalgoorlie Electric.—Traffic receipts for August, £5,005; aggregate from January 1, £34,892.

Lisbon Electric.—Traffic receipts for October (Milreis 121,729.

Lombardy Road.—Traffic receipts for the month of July, 1,356, increase £16; aggregate from January 1, £8,795, increase £144.

Madras Electric.—Traffic receipts for fortnight ended October 31, Rs. 14,961, increase Rs. 2,096; aggregate from January 1, Rs. 2,86,564, increase Rs. 33,852.

Twin City Rapid.—Traffic receipts for the month of October, $473,821, increase $52,840; aggregate from January 1, $4,691,258, increase $787,590. Nett traffic receipts, $247,385, increase $19,342; aggregate from January 1, $2,513,773, increase $381,192.

The Investors' Review.

The Week's Money Market.

BANK RATE 6 PER CENT. (Advanced from 5 per cent. on Friday, October 19.)

Norfolk House, Friday Evening.

Throughout the week short credits in the open Money market have been comparatively easy. Even yesterday, when the heavy demands of the Stock Exchange settlement payments had to be provided for, the discount market was able to supply much of its wants at 4¾ per cent. on seven-day loan, and although call money ran up to 6 per cent. it was pretty generally lent at 5 per cent. There was, however, no spare money in the market at any time, and the Bank return points to enormous borrowings at the Bank between now and the end of the year. They began yesterday, for the market had to discount a good many January bills at 6 per cent., and also took a small sum on seven-day loan at 6½ per cent., the truth being that it was not really able to pay off what it borrowed the previous week and only did so by a sort of bravado. This morning rates stiffened further, so that 5 per cent. was the minimum quotation for seven-day money. Call loans, however, were not so dear, being less wanted, and although some paid 5½ per cent. a certain amount was parted with at 4½ per cent.

Had it not been for threatening foreign exchanges and the reports of gold going to Brazil and elsewhere, we should have found discount rates depressed by the cheapness of short credits. As it is bill brokers have been afraid that they might be caught, not only by the South American demand, both Brazilian and Argentine, but by a renewal of the New York purchases. Therefore they have struggled to keep rates up, and most of the principal houses gave 5½ per cent. as their minimum for three months' remitted bills. They struggled to get 5 9/16 and 5 5/8 per cent., but for all that business was done most days under 5½, and the finest class of remitted paper changed hands up to Wednesday at 5 3/8 per cent. Long usances, however, inclined to become less easy to purchase, and by yesterday the six months' rate had become firm at 4¾ per cent. with a tendency towards 4¾ per cent. The New York exchange is not yet down to the point that would allow gold to be withdrawn from the Bank for shipment to the States at no loss, but it has come very near that point, and the necessities of Wall Street may drive it low enough before the year ends to imperil once more our altogether insignificant stock. Therefore discount rates should be kept up no matter what the consequences may be, for if exports of gold are resumed to America it will be nearly impossible to avoid something very like a panic on Wall Street as well as here.

Both bankers and bill brokers begin to realise this, and watch the foreign exchanges with an unusual absorption. The New York rate is not quite down to gold exporting point, allowance made for the higher rate of interest now ruling here, but the Buenos Ayres rate is at a figure which permits gold to be taken for Argentina at a profit, and there were stories about this afternoon to the effect that £200,000 was leaving by to-day's boat. None did leave, but it is estimated that about a third of last winter's shipments, which came to £3,126,000, will be taken this winter. With other markets threatening us in this way it would be the height of folly to allow discount rates to fall back, and as there was a large supply of paper in the market to-day, with prospects of a continued full supply, the brokers had no difficulty in putting the three months' Bank bill rate up to 5¾ per cent. with a tendency towards 5¾ per cent. Short bills were particularly dearer at 5¾ per cent. as a minimum this afternoon. The Bank itself again did a large business in short bills at 6 per cent. People are rushing to the Bank thus to put themselves in funds solely because of the dread of gold exports, as the local credit pressure has not yet developed. A few three months' bills were taken by the Continent at 5 11/16 per cent., but we quite expect to find the market close up to Bank rate next week.

Since the return came out yesterday afternoon the Bank has lost £820,000 in gold to Brazil, against which only £151,000 in bought bars came in, so that what with this withdrawal, the probable shipment of gold to Argentina, and the steady drain of currency by the provinces, the return promises to be distinctly weaker next Thursday than it is, and it is weak enough already. Other deposits have dropped off to less than £42,000,000, some of which total must be Japanese Government balances. What we shall therefore see is a rapid increase in the market's indebtedness to the Bank in order that the supply of credit outside as indexed by other deposits may be raised to an amount adequate to meet the end of the year demands. We are at the most critical year's end encountered for many a day.

A call of £200,000 falls due to-morrow on Buenos Ayres and Pacific new ordinary shares, but next week the entire amount of new money to be called up is under £300,000. Only one item requires notice. On Saturday, 22nd, £250,000 is due upon Bahia Blanca and North-Western Railway guaranteed shares. The other items are all quite insignificant.

SILVER.

In addition to the resumption of purchases by the United States Government it is confidently expected

that the Indian Government will shortly have to come into the market owing to the pressing need for currency recently disclosed by the weekly returns. Quotations for bars were consequently lifted to 32¼d. per oz. for spot and 32 3/16d. per oz. for delivery two months forward. At these levels, however, the demand fell off, and a little pressure to sell caused a gradual relapse to 31⅞ and 31¾d. per oz. respectively, but a little revival of the bazaar inquiry followed and 1/16d. of the loss was recovered. Applications for the Rs. 1,20,00,000 Council drafts on India were again large at Rs. 1,52,63,000 for bills and Rs. 7,26,00,000 for telegraphic transfers. Only Rs. 20,94,000 of these were allotted in bills against Rs. 99,06,000 in transfers, tenders at 1s. 4 3-32d. and 1s. 4 5-32d. per rupee respectively, receiving about 13 per cent. Special sales have since been made of Rs. 30,13,000 in bills at 1s. 4 1/16d. and Rs. 45,00,000 in transfers at 1s. 4 3/16d. Next Wednesday another Rs. 1,20,00,000 will be offered.

BANK OF ENGLAND.

AN ACCOUNT pursuant to the Act 7 and 8 Vict. cap. 32, for the Week ending on Wednesday, December 12, 1906.

Stock Market Notes and Comments.

The only happy market this week seems to have been that for South African shares, and it only brightened up on Thursday over the dividend announcements, so that we have nothing to say about it beyond welcoming the change as one which, if continued, may give long-suffering shareholders a chance to sell. We are not sure of this yet, because it is only the professionals who are at work, and very few of them have any money to buy anything with, poor fellows.

Other markets are settling down for the Christmas holidays, and there is less and less disposition to engage in new business. The public seems to have nibbled a little at the Canadian Pacific gamble, but there also it is the insider who is doing most of the shouting, and we have to go to New York and Montreal to find the source of most of the energy by which not only Canadian Pacific shares but Hudson's Bays are being hoisted. We do not like the outlook of things there, and hope sensible people here will not be drawn into the whirlpool. A reaction is bound to come, and in proportion to the inflation will be the collapse.

In other respects markets are much where they were and where they will continue to be until the cloud lifts, or until the tied up credit is set free by a general liquidation, the results of which can quite easily be disastrous. Wall Street gives plenty of warning that it is over-charged, and when its aerial structures in credit begin to crumple up woe betide those who have believed in their stability.

The Week's Stock Markets.

The Stock Exchange had an exceptionally heavy account to settle this week, but this did not prevent the enthusiasts from keeping the "bull" campaign going in the speculative securities lately marked out for special favour. The worst Associated Banks' return since 1893 did nothing to damp the ardour of the gamblers in American Railroad securities, and the long predicted price of 200 for Canadian Pacific shares was reached a week ago. Activity in Mexican railway issues on revived rumours of an amalgamation between the various systems in that country was also a prominent incident, and it is not improbable that these statements have some foundation in fact. At the end of the week it was said that a Mexican railway merger had been actually arranged with a capitalisation of £45,000,000, the united railways to be under the control of the Mexican Government. The Home Railway market also gathered a good deal of strength during the early days when the settlement arrangements disclosed a shortage of stock, but all sections were inclined to react near the close, partly owing to the large sum in gold which left the Bank for South America with further important shipments threatened. The fact that the Stock Exchange has entered on the last account of the year was another restrictive influence, and most dealers are now prepared for a general slackening down until the end of 1906. An all-round reduction in the commitments open for the rise would be extremely welcome at the present moment because money will gradually become dearer as the year nears its end, and the smaller the amount of stock to be contangoed on Christmas Eve the better. It was noticeable that at this week's settlement the account showed a considerable increase in more than one direction, and

there is probably no doubt that this market is again financing a much larger quantity of American Railroad shares. A good deal of extra credit was sought from the banks for carry-over purposes, and although old loans went on at the usual 6½ per cent., any further money required was not lent under 6¾ and sometimes 7 per cent. Credit dealers other than the joint-stock banks sometimes declined to grant any loans below 7 per cent., and charged ¼ per cent. more for fresh accommodation. Making-up prices, however, usually favoured the "bulls," and while credit can be readily obtained, even though the charge be stiff, the markets may struggle on without a serious breakdown, although a collapse is sooner or later inevitable. Consols were steady during the first day or two and then showed slight improvement, but lost most of it again before the end when all markets were affected by the loss of gold from the Bank. Irish Land stock was a trifle firmer, but small gains in India issues were soon lost, and Bank of England stock closed 1 lower. Home County and Corporation stocks were still steady, and the market for Colonial Inscribed issues can be described as firm, it being suggested that the clerical trouble in France is leading to the investment of a good deal of church money in English securities. The carry-over rate on the last-named stocks was 6 to 7 per cent.

Apart from leading copper shares which are handled in the Foreign Bond market, very little of interest occurred during the week in international securities. A moderate amount of buying on local account was noticeable in Peruvian Corporation issues, and prices showed substantial improvement, but a little of the advance was lost in the last day or two. Other South American issues were badly neglected, and a few Argentine and Brazilian bonds closed ¼ to ½ lower. The various Chinese loans attracted less attention than of late, but rumours that extensive military preparations are still going forward in Japan had an adverse effect on the bonds of that country, and although the setback was followed by a rally prices were soon moving down again. Russians and Spanish eased off a trifle in the European division, but Egyptian Unified were a trifle better and nothing else moved. Among Central American securities Venezuelans lost about ½, and Colombians and Honduras closed dull. Making-up prices disclosed an all-round improvement of ¼ to ¾ in Argentine loans, and gains of ¾ to 1½ in Chilians and Chinese. Brazilians were somewhat irregular, but German 3 per cent. rose 1 and Hungarians showed an improvement of 5/8. Movements either way of ¼ to 3/8 took place in Japanese issues, Portuguese were up ½ and Russians made up ¾ to 1½ better. The various San Paulo loans were ¼ to 1½ down, but declines of 2 in Egyptian State Domain and of 2½ each in Chinese Shanghai Nanking Railway and Brazilian 1883 were due to interest deductions. With the exception of Peruvian preference and ordinary, which cost 7 to 9 per cent. to continue, all South American bonds, together with Chinese and Japanese issues, were carried over at 5 to 7 per cent. That rate also prevailed on Russian 4 per cent., 1889, and Spanish sealed, but the new Russian loan could not be borrowed on for less than 7 to 9 per cent., and on Turkish, which has recently been rather scarce for delivery, the contango rose to 6 to 8 per cent. The Central American group of securities was taken in at 7½ to 8½ per cent.

Home Railway stocks were inclined to give way at first on sales by speculators who desired to avoid paying contangos at the settlement on Tuesday, but the weakness was temporary. Buying for the new account was stimulated by another batch of excellent traffic returns, which served to strengthen the hopes entertained of increased dividends for the half-year, and the market was decidedly firm. Great Western ordinary and new stocks have attracted most attention, but Brighton deferred and South-Western ordinary also met with good support, and all finished at advances of 30s. to £2. The loss of gold on Thursday depressed prices a little, but most of the changes on balance were still favourable. Midland preferred, however, was lower, North-Western also shed a fraction or two, and Metropolitan was decidedly heavy.

Scotch stocks, too, were inclined to be weak, but Welsh issues were exceptionally buoyant, Barry ordinary and deferred putting on 2 to 3, and Taff Vale being 1½ up. No particular change took place in the account open in this section, and carrying over charges were much the same as a fortnight ago at 6 to 8 per cent., with rather higher rates on South-Eastern deferred and Midland deferred. Movements were about equally divided between losses and gains, but except for a drop of 1 in Chatham first preference the declines were fractional, whereas, on the other hand, we find Great Western ordinary and new stocks, Brighton deferred, South-Western ordinary, and Gt. Northern, Piccadilly, and Brompton debenture stocks all 2 higher, South-Western deferred 1¼ up, and North-Western, North-Eastern and Brighton ordinary 1 better.

"The worst Bank statement since 1893" was little heeded by Wall Street speculators, who asserted that it had been manipulated to force Mr. Shaw to come to the rescue, and were confident that the manœuvre would succeed. Results proved that they were justified in this belief, as the Secretary to the Treasury announced his intention of depositing £2,000,000 with certain banks and applying a further like amount to the redemption of bonds maturing next year. The relief afforded was totally inadequate to the needs of the gamblers, but it was sufficient to put a little life into the market, and overnight orders from New York sent quotations here about $1 over parity on the morning following the announcement. Talk of the possibility of securing gold from Paris helped the "bulls" in their campaign for a time, but profit-taking and some forced liquidation, caused by the Standard Oil group and others calling in loans, sent prices well below the best. Reading shares were a prime favourite for a time, the persistent reiteration of the story that the railway and coal assets were to be separated having induced a belief in its truth, and Louisville, Atchison, and Milwaukee were taken in hand in turn. Of them all, however, the last-named was the only one to end the week with a really substantial improvement. Missouri and Kansas, Southern Pacific and Union Pacific were all thrown out towards the close, with the result that quotations were all noticeably lower. During the past fortnight New York has been busy shifting part of its burden back to this market, and the account arranged on Tuesday was considerably larger. Lenders were again inclined to discriminate against these securities, with the result that contangos were never less than 8 per cent., and frequently rose to 9 and even 10 per cent. Making-up prices show that the bulls had decidedly the best of the struggle, and amongst the larger gains recorded were 5½ in New York Central, 4 in Atchison, and 3¼ in Reading. Chesapeake and Milwaukee were both 3 higher. Denver ordinary and preferred rose 2½ and 1, National of Mexico preferred issues 2½ and 1½, and Ontario also put on 2½. Erie ordinary, Louisville, Northern Pacific, and Wabash common improved from 1½ to 2, and the only adverse movements worth noting were declines of 1½ in Missouri and Kansas and 1 in Union Pacific preference.

Far and away the greatest sensation this week has been provided by Canadian Pacific shares, which reached 200 on Saturday. They slipped back to 190 on a rush to secure profits, but did not hang round the lower figure very long before the speculators again took them in hand and hoisted them to over 200. The most optimistic opinions are expressed on all sides of the wonderful developments which have taken place in Canada and of the impossibility of any setback occurring, but those holding these views have apparently forgotten that severe winters in that country bring blizzards and snow-blocked lines, and what is still more important, they ignore the possibility of a time of bad harvests coming after the phenomenally long period of prosperity. Final prices were by no means the best, as Wall Street was not altogether happy, and the bulk of the dealings have throughout been on that

market. Grand Trunk stocks have been quite neglected while this mad stampede for Canadian Pacifics has been on, and have hardly moved one way or the other. Quebec and Lake St. John income bonds, however, were lifted sharply on a report that the Canadian Northern, failing to obtain access to Quebec in any other way had determined to reach the port through this line. Some recovery took place in Mashonaland debentures, but Rhodesia Railways first debentures continue to dwindle. On the account the gain in Canadian Pacific shares was no less than $14, the making-up price being 201 compared with 187 at the previous settlement. Grand Trunk stocks were only ¼ to ½ up, but Quebec and Lake St. John bonds improved £2. Amongst Indian Railways Burma put on 2 and East Indian annuities and Madras stock rose ½ to 1, while Bengal and North-Western ordinary fell 1. Money on Canadian Pacifics was about as dear as on Yankee things, but Grand Trunk stocks were carried over at 7 per cent. or very little more.

In the Foreign Railway group considerable interest was displayed in the stocks of the old Mexican company on persistent rumours that the line was to be amalgamated with the Interoceanic, and that the 8 per cent. first preference stock was to be converted into a security carrying a lower rate of interest. Prices were run up several pounds on the strength of the story, but they slipped back and finished below the best when no confirmation was forthcoming. Interoceanic issues followed Mexican in a modest way, but closed practically unchanged. Hardly anything went on in Argentine stocks beyond a little further buying of East Argentine and some selling of Buenos Ayres and Pacific preference issues. Chilian Transandine "A" debentures were heavy, and Guayaquil and Quito second bonds. Antofagasta and San Paulo ordinary stock also gave way to the extent of £1 or so. Manila debenture issues closed from 2 to 2½ lower, and Paraguay Central debentures were decidedly flat. In the past account Mexican ordinary and second preference rose 9⅜ and 9½ and the first preference 3. Mexican Southern ordinary put on 1½, and Interoceanic preference gained 7/16, but the "B" debenture stock of that company fell 6. Changes in Argentine issues were mostly adverse, Buenos Ayres and Pacific preferences being 3 and 2½ down, Buenos Ayres and Rosario stocks 1 to 2 lower, and Cordoba and Rosario preference and debenture stocks losing 1½ to 3. East Argentine, however, was exceptionally strong, with an advance of 13, and Argentine North-Eastern preference improved 2¾. Paraguay Central debenture stock was 3½ higher, but United Railways of the Havana receded 3 and Antofagasta things receded 1 to 1½. Contango on South American things ranged from 7 to 8 per cent., but on Mexican Railway stocks the charge was 8 to 10 per cent., with a fairly big account open in them.

Taken altogether, the Miscellaneous groups of securities have shown less activity and less strength, but there were again one or two strong features, the "bulls" being reluctant to abandon the forward movement in some of their favoured securities. One of the principal incidents was the severe relapse in Pekin Syndicates which followed the publication of a cable from China indicating that the coal measures were unpayable and unworkable. Hudson's Bays were taken in hand again by the clique which engineered the recent rise to over 130, and the declaration of an interim dividend of 20s. per share or twice as much as that paid a year ago was taken advantage of to raise the price several pounds. The best figure touched was 124, but the price was back to 120 again before the week ended. Other Land shares were not specially active, but there was a good deal of buying in Western of Canada Lands, which closed somewhat better. Telegraph issues were particularly flat for some undisclosed reason, prices falling steadily almost throughout the week, and there was likewise a good deal of weakness in cable construction shares. Textile issues were a little irregular, but mostly showed strength. Woolcombers ordinary shares were again singled out for special attention, and rose rapidly from about 1⅞ to 2⅝. It is said in the market that results for 1906 will be extremely favourable, and some go so far as to predict that the profits will show a return of 50 per cent. on the ordinary shares. Several of the leading Iron and Steel issues added fractions to their prices, and in the Motor and Cycle group Daimlers and Darracqs were particularly strong. Nitrate shares continued to fall away in a number of instances, an exception being Santa Ritas, which showed particular strength. Nothing of importance happened in the list of Catering securities, but in Meat shares Nelsons were dull, while Eastmans recovered from their recent weakness. Sweetmeat Automatics were easier on the decrease in the revenue for November. Buying still goes on in London Docks deferred in spite of the postponement of the Port of London Bill till next year, and there seems to be a general opinion that eventually the Government will accept, with modifications, the proposals put forward by the dock companies. The Brewery market was much less excited, and while a few debenture stocks rose 1 or 2 some of the securities lately so prominent showed renewed dulness, probably due to profit-taking. Cunards were firmer in the Shipping division, but among Omnibus issues there was a bad break in the shares of the London Power Omnibus Company, one of the recent motor promotions, on the report showing a loss of something like £17,000. Carry over charges were occasionally somewhat heavy, and 8 to 10 per cent. was not an unusual contango, although some securities were continued for rather less. During the fortnight Associated Cement preference shares put on ⅝, and a similar improvement was seen in Fraser and Chalmers, owing to the improved report. Pease and Partners and Santa Rita Nitrate each rose ½, and there was an all-round gain in the Brewery section. Allsopps stocks were up 4 to 10, Bieckerts' ordinary rose 2, and Watney Combe issues 3½ to 10. National Bank of Egypt shares showed a rise of ⅞ and Commercial Union Assurance were up 2½. On the other hand, Eastmans ordinary fell ⅛, Gordon Hotels ⅜, and Lever Bros. preference 7/16. Sweetmeat Automatics were 3s. lower, Hudson's Bays made up 1 worse, and Pekin Syndicates showed a loss of 3½, the deferred shares being down 40, and Shansi shares 4s. 3d. Eastern Telegraph stock was 5 lower, and Standard Bank of South Africa shares were down 1.

Stock Exchange people are grumbling because the Committee has not arranged to do all the contango business next Friday, or even on Friday and Saturday, instead of postponing the bulk of the work to Christmas Eve. This shows that the market is already on holiday thoughts intent, and really business is not much to be desired in present circumstances. To-day prices shaded off a little under gold export fears. The Kaffir Circus lost a little of its elasticity at the close, and all Home securities lost colour, including Consols, but the fall in Yankees was not very pronounced, and the "bulls" of Canadian Pacific, Hudson's Bay, and Milwaukee shares bravely defied all the forces of dear money as well as the disheartening influence of an apathetic public. Rio Tinto shares were sent up to 84½ because Paris operators wanted to buy, and there were no shares to be had. It is a wholly artificial market.

THE WEEK'S PRICE MOVEMENTS.

BRITISH FUNDS, &c.—Fall: 2⅛ p.c. Annuities Acct. ¼, to 85¼-85⅜, India 3½ p.c. Acct. ¼, to 103½-104, do. 2 p.c. Acct. ¼, to 92½-93.

British Broken Hill Proprietary.—2,179 tons crude ore, produced 368 tons concentrates, containing 234 tons lead and 9,882 ozs. silver.

Broken Hill Proprietary Block 10.—Treated 12,114 tons crude ore, producing 1,610 tons concentrates, containing 1,004 tons lead and 51,808 ozs. silver.

Broken Hill South Blocks.—439 tons carbonate ores despatched to smelters, average value 35 per cent. lead and 5½ ozs. silver per ton.

Broken Hill Proprietary Block 14.—Treated 6,382 tons crude ore, producing 858 tons concentrates, containing 520 tons lead and 26,466 ozs. silver.

Burbank's Main Lode (1904).—Crushed 720 tons, 604 ozs.; 709 tons by cyanide, 143 ozs.; total, 747 ozs.

Burma Ruby.—180,000 loads washed, producing rubies value Rs.155,000. Royalties, Rs.18,000.

Cape Copper.—Ookiep—903 net tons of 17 per cent, equal to 153 tons fine copper. Nababeep.—3,772 net tons of 4 per cent., equal to 151 tons of fine copper.

Chinese Engineering.—Output of coal and sales 23,500 tons; sales 23,000 tons; consumption 1,675 tons.

City and Suburban.—9,621 ounces; crushed 24,200 tons.

Glitters United.—Ore treated 1,674 tons. Mineral sold or on hand: Tin and wolfram 20 tons, valued at £2,334; arsenic and copper-iron product valued at £549.

Consolidated Gold Fields of New Zealand.—Progress: crushed 5,026 tons ore, value £8,889. Golden Fleece—Crushed 1,167 tons ore, value £2,320. Wealth of Nations—Crushed 1,160 tons ore, value £2,046.

Consolidated Main Reef.—Crushed 18,135 tons, 3,573 ozs.; sands and concentrates by cyanide 18,135 tons, 2,945 ozs.; total, 6,518 ozs.

Copiapo.—650 tons copper ores, averaging 12 per cent.

Crown Reef.—Crushed 20,350 tons from mill, 6,834 ozs.; from sands and concentrates 2,409 ozs.; from slimes, current and accumulated, 1,405 ozs.; total, 10,648 ozs.

De Lamar.—Crushed 636 tons, yielding $9,350.

Durban-Roodepoort.—Quartz milled 10,755 tons, 3,270 ozs.; tailings 7,860 tons, 996 ozs.; slimes 3,360 tons, 203 ozs.; total, 4,474 ozs.

Durban Prospect.—Crushed 1,130 tons, 277 ozs.

East Gwanda.—East Gwanda: Crushed 5,870 tons, 2,772 ozs.; concentrates 260 tons, 958 ozs., 882 ozs. silver. Geelong: cyanide 3,200 tons, 194 ozs.; total, 3,946 ozs. Smelter, 60 matte, 417 ozs., 657 ozs. silver, and 6 95 tons metallic copper.

Etruscan Copper.—Value of copper produced, £3,900.

Ferreira.—Crushed 22,100 tons, 8,521 ozs.; sands 15,400 tons, 3,186 ozs.; slime 7,467 tons, 933 ozs.; dump 442 ozs.; total, 13,082 ozs.

Forbes Rhodesia. — Veracity: Crushed 525 tons, 38 ozs.; cyanide 650 tons, 102 ozs. Dumbleton: Crushed 470 tons, 214 ozs.

French Rand.—Crushed 19,200 tons, 4,165 ozs.; tailings and slimes 19,749 tons, 2,428 ozs.; total, 6,593 ozs.

Gaika Gold.—607 ozs. from 1,025 tons ore crushed, £2,403.

Geldenhuis Estate.—Crushed 17,075 tons; from mill 4,304 ozs.; from tailings by cyanide 2,195 ozs.; from slimes 417 ozs.; total, 6,916 ozs.

Giant of Rhodesia.—4,404 tons, 2,362 ozs.

Globe and Phœnix.—Crushed 6,759 tons ore, 3,379 ozs., equal to 10 dwts. per ton; tailings, average assay value per ton, 2·66 dwts.; 4,200 tons cyanide, 482 ozs.; total, 3,861 ozs.

Golden Horseshoe Estates.—Ore treated, 20,187 tons, 12,102 ozs.

Great Boulder Main Reef.—Clean-up £3,166, from 2,273 tons. Tailings assay 1 dwt. per ton.

Great Boulder Perseverance.—Treated 14,508 tons, 7,199 ozs. gold and 836 ozs. silver.

Great Boulder Proprietary.—Sulphide mill, 12,445 tons, 11,930 ozs.; tailings 1,855 tons, 290 ozs.; total, 12,220 ozs.

Great Fingall Consolidated.—21,641 short tons, equal to 16s. per ton, 8,656 ozs.

Gwalia Consolidated.—Crushed 1,605 tons; 950 tons sands; 1,310 tons slimes; assay value of tailings 28s. 9d. per ton; total value, £2,650.

Hainault.—Crushed 4,981 tons, 1,739 tons.

Hannan's Reward and Mount Charlotte.—Crushed 2,525 tons, 393 ozs.; royalties from tributors, £241.

Ivanhoe.—Output 18,190 tons, 10,351 ozs.; average value of yield, 48s. 4d. per ton.

Johannesburg Consolidated Investment.—New Primrose, 7,596 ozs., 18,431 tons; Glencairn Main Reef, 5,058 ozs., 18,750 tons; Ginsberg, 2,490 ozs., 7,831 tons; New Rietfontein, 9,280 ozs., 16,751 tons; Witwatersrand Gold, 10,779 ozs., 33,160 tons; Consolidated Langlaagte, 6,692 ozs., 20,048 tons; New Unified Main Reef, 2,595 ozs., 8,370 tons.

Jubilee.—Mill, 1,079 ozs. from 4,742 tons crushed; cyanide, 470 ozs. from 3,591 tons.

Jumbo Gold.—Crushed, 1,965 tons, 1,303 ozs.; 937 tons by cyanide, 486 ozs.

Jumpers.—Crushed, 11,012 tons; from mill, 3,127 ozs.; tailings, 1,615 ozs.; slimes, 572 ozs.: total, 5,314 ozs.

Kelantan.—Recovered 223 ozs.

Killarney Hibernia.—Crushed 2,909 tons, 954 ozs.

Knight's Deep.—31,257 tons, 11,285 ozs.

Komata Reefs.—1,740 tons; bullion, £3,450.

Lancefield.—2,381 tons of ore treated, £4,162; in addition 401 tons old concentrates treated, £1,655.

Lancaster Gold.—Crushed 15,600 tons, 3,105 ozs.; cyanide 10,947 tons, 1,455 ozs.; total, 4,560 ozs.

Langlaagte Estate.—Ore crushed 28,636 tons, 5,707 ozs.; concentrates, cyanide, 600 tons, 982 ozs.; tailings, cyanide, 18,720 tons, 2,019 ozs.; slimes 13,310 tons, 1,051 ozs.; total, 9,769 ozs.

Le Roi.—Shipments 81,000 tons, containing 2,300 ozs. gold and 3,100 ozs. silver and 147,000 lbs. copper.

Luipaards Vlei Estate.—Crushed 14,000 tons, 2,729 ozs.; tube mills 538 ozs., cyanide 1,529 ozs., slimes 227 ozs.

Matabele Reefs.—Blanket—2,030 tons, 460 ozs.; Alice—Crushed 520 tons, 197 ozs.; cyanide 475 tons, 106 ozs.

May.—Crushed 13,930 tons, 3,596 ozs.; cyanide 9,990 tons, 2,043 ozs.; slimes 4,044 tons, 282 ozs.; total, 5,921 ozs.

Meyer and Charlton.—2,086 ozs. from 12,300 tons crushed; 3,358 ozs. from cyanide; total 5,444 ozs.

Montana.—Drumlummon—2,200 tons tailings and fines, producing cyanide precipitates represented by 210 ozs. gold and 1,800 ozs. silver. Lucky Girl Group—2,500 tons of ore, producing 590 ozs. gold and 560 ozs. silver.

Morven (Rhodesia).—Crushed 1,533 tons, 239 ozs.; 1,490 tons tailings by cyanide, 123 ozs.

Mount Boppy.—6,560 tons, 1,086 ozs.; cyanide 3,980 tons, 1,210 ozs.; slimes 2,264 tons, 1,331 ozs.; concentrates 24 tons, 125 ozs; total, 3,752 ozs.

Mount Lyell.—30,568 tons of ore treated. In addition 167 tons purchase ore and metal-bearing fluxes. Converters produced 625 tons blister copper containing copper 619 tons, silver 58,251 ozs., gold 1,646 ozs.

Mount Morgan (Queensland).—Chlorinated 17,767 tons, 9,971 ozs.; 280 tons blister copper, containing 2,800 ozs.

Mount Zeehan.—596 tons silver-lead ore, containing 178 tons lead and 36,000 ozs. silver.

Myalls and Peak Hill.—Crushed 3,550 tons, 467 ozs.

New Comet.—Milled 21,000 tons, 4,331 ozs.; sands 15,507 tons, 2,656 ozs.; slimes 6,243 tons, 1,013 ozs.; total, 8,000 ozs.

New Goch.—Crushed 20,692 tons, 2,941 ozs.; cyanide 4,336 ozs.; total, 7,277 ozs.

New Heriot.—Crushed 9,200 tons, 4,363 ozs.

New Kleinfontein.—Milled 32,310 tons, 8,910 ozs.; sands 22,058 tons, 3,381 ozs.; slimes 8,954 tons, 619 ozs.; total, 12,910 ozs.

New Modderfontein.—Crushed 19,300 tons, 5,296 ozs.; tailings 10,640 tons, 1,141 ozs.; total, 6,437 ozs.

New Zealand Crown.—Crushed 1,943 tons, value £4,057.

Nigel Deep.—3,945 tons, 1,802 ozs.

North Broken Hill.—Treated 2,000 tons crude ore, producing 332 tons concentrates, containing 233 tons 11 cwt. lead and 5,554 ozs. silver.

North Randfontein.—Crushed 15,820 tons, 4,044 ozs.; tailings, cyanide 10,950 tons, 1,660 ozs.; slimes 5,400 tons, 513 ozs.; total, 6,217 ozs.

Oroville Dredging.—Gross returns $17,000.

Orova Brownhill.—Crushed 10,740 tons, 11,679 ozs.

Penhalonga Proprietary.—Crushed 8,000 tons ore, 799 ozs.; concentrates 130 tons, 960 ozs.; total, 1,759 ozs.

Rezende.—Crushed 3,000 tons ore, 680 ozs.; sands 2,425 tons, 239 ozs.; concentrates 13 tons, 65 ozs.; total, 984 ozs.

Rhodesia Consolidated.—Crushed 1,695 tons, 921 ozs.; cyanided 872 tons, 302 ozs.; total, 1,223 ozs.

Rhodesia Goldfields.—Bell's Reef—Crushed 1,365 tons, 538 ozs.; cyanide 700 tons, 201 ozs.

Porges Randfontein.—Crushed 14,711 tons, 4,286 ozs.; concentrates by cyanide 1,496 tons, 552 ozs.; tailings by cyanide 9,324 tons, 1,182 ozs.; slimes 4,255 tons, 341 ozs.; total, 6,361 ozs.

Rhodesia.—Colleen Bawn: Crushed 339 tons, 146 ozs.; 250 tons by cyanide, inclusive of 16 tons concentrates, 281 ozs.

Robinson.—Crushed 30,698 tons, from mill 14,968 ozs., from tailings (by cyanide) 4,910 ozs., from slimes 1,449 ozs.; total, 21,327 ozs.

Robinson Central Deep.—Crushed 16,880 tons, 7,389 ozs.; sands and concentrates by cyanide 12,400 tons, 2,858 ozs.; slimes 5,572 tons, 588 ozs.; total, 10,825 ozs.

Robinson Deep.—36,158 tons, 18,306 ozs.

Robinson Randfontein.—Crushed 14,684 tons ore, 3,542 ozs.; concentrates, cyanide, 1,450 tons, 395 ozs.; tailings, cyanide, 8,775 tons, 1,441 ozs.; slimes 5,664 tons, 466 ozs; total, 5,844 ozs.

Roodepoort United.—Crushed 15,011 tons, 3,938 ozs.; 1,913 ozs. from cyanide; total, 5,851 ozs.

Selukwe.—Crushed 6,531 tons, 1,483 ozs.; tailings assay 2.48 dwts. per ton; cyanide, 4,696 tons, 410 ozs.; total, 1,893 ozs.

Simmer and Jack East.—36,421 tons, 10,802 ozs.

Simmer and Jack.—60,414 tons, 24,640 ozs.

Sons of Gwalia.—4,361 ozs., value £18,491.

South Randfontein.—Crushed 15,356 tons, 3,003 ozs. Concentrates; cyanide, 1,350 tons, 421 ozs.; tailings, cyanide, 9,250 tons, 1,473 ozs; slimes, 4,256 tons, 444 ozs.; total, 5,341 ozs.

Surprise.—Crushed 3,003 tons, 1,202 ozs.; equivalent to 8.00 dwt per ton; cyanide, 5.0 ozs from 3,505 tons.

Talisman.—Ore 3,935 tons, value £17,003.

Tasmanian Copper.—Ore, fluxes, &c., 3,016 tons, producing 212 tons matte, averaging 57 per cent. copper.

Theta.—Crushed 1,365 tons, 427 ozs.; cyanide 167 tons, 76 ozs.

Tomboy Gold.—Ore crushed 19,600 tons, value $76,500; concentrates shipped 463 tons, estimated to realise $39,000.

Transvaal and Delagoa Bay Investment.—Output from the colliery, 30,750 tons.

Treasury.—Crushed 8,669 tons, 1,780 ozs.; sand and concentrates by cyanide 8,009 tons, 952 ozs.; total, 2,732 ozs.

Van Ryn.—Crushed 22,350 tons, 6,947 ozs.; sands, cyanide, 15,290 tons, 2,294 ozs.; slimes, 7,441 tons, 565 ozs.; total, 9,806 ozs.

Victorian Cornish.—Crushed 1,500 tons, 750 ozs.

Village Deep.—Crushed 23,400 tons, 4,680 ozs.; sands and concentrates by cyanide 18,450 tons, 2,804 ozs.; slimes, 6,279 tons, 612 ozs.; total, 8,096 ozs.

Village Main Reef.—Crushed 36,190 tons, 9,914 ozs.; sands, and concentrates, cyanide, 27,413 tons, 4,224 ozs.; slimes, 10,473 tons, 769 ozs.; total, 14,707 ozs.

Vogelstruis Estates.—Quartz milled, 7,435 tons, 2,196 ozs.; tailings, 5,405 tons, 603 ozs.; total, 2,799 ozs.

Waihi Grand Junction.—Crushed 2,250 short tons; bullion shipped, £4,500; 5 tons concentrates shipped to Sydney.

Wanderer (Selukwe).—Cyanide, 15,066 tons, 2,282 ozs.

West Rand Central.—Crushed 2,400 tons, 450 ozs.; by cyanide, 1,970 tons, 450 ozs.; total, 931 ozs.

Willoughby's Consolidated.—Crushed 1,325 tons, 602 ozs., equivalent to 9.08 dwts. per ton; cyanide, 700 tons, 166 ozs.

Windsor.—Crushed 4,788 tons, 514 ozs.; cyanide, 3,759 tons, 725 ozs.; total, 1,239 ozs.

Witwatersrand Deep.—Crushed 29,100 tons, 7,502 ozs.; sands and concentrates by cyanide 29,729 tons, 4,230 ozs.; total, 11,732 ozs.

Worcester.—Crushed 3,980 tons, 1,159 ozs.

Wolhuter.—Crushed 18,900 mill tons; sands and slimes 18,900 tons, 3,974 ozs.; fine gold from sands 2,367 ozs.; total yield of fine gold, 6,361 ozs.; value of output, £26,838; estimated profit, £5,816.

Zeehan-Montana.—430 tons silver-lead ore, containing 260 tons lead and 28,000 ozs. silver.

DIVIDENDS ANNOUNCED.

RAILWAYS.

Antofagasta (Chili) and Bolivia.—£2 10s. per cent on the preference stock (making 5 per cent. for year), and a further £2 10s. per cent. on the preferred ordinary stock, payable on Jan. 1.

Barsi Light.—Final at the rate of 3¾ per cent (making 6 per cent. for the year to June 30), and bonus of 2 per cent., carrying forward £2,727.

Denver and Rio Grande.—Semi-annual of 2½ per cent on the preferred capital stock, payable Jan. 15.

INSURANCE.

London and Lancashire Life.—Half-yearly to Dec. 31, at the rate of 8s. 3d. per share per annum, payable Jan. 1.

Royal Exchange.—Usual interim of 4 per cent. on the capital stock.

BREWERIES.

Mitchells and Butlers.—Interim at the rate of 6 per cent. per annum on the ordinary and preference shares for half-year ending Dec. 31, 1906.

Ohlsson's Cape.—Interim on the ordinary shares of 6 per cent.

Newcastle.—At the rate of 7 per cent. per annum on the ordinary shares for half-year ended Oct. 31.

MINES.

Associated Northern Blocks (W.A.).—Final of 3s. per share, making 25 per cent. for year ended Sept. 30.

Bonanza.—Interim of 12½ per cent. (2s. 6d. per share).

Crown Deep.—Interim of 40 per cent. (8s. per share), payable Feb. 4.

Ferreira Gold.—150 per cent. (30s. per share).

French Rand.—5 per cent. (1s. per share).

Geldenhuis Deep.—Interim of 20 per cent. (4s. per share), payable Feb. 4.

Geldenhuis Estate and Gold.—Interim of 40 per cent.

Hainault.—Interim of 1s. per share.

May Consolidated.—22½ per cent. (equal to 4s. 8d. per share), payable Dec. 31.

New Kleinfontein.—15 per cent. (3s. per share).

New Modderfontein.—Interim of 5 per cent. (4s. per share), payable Feb. 4.

Oriental Consolidated.—50c per share.

Rand.—Interim of 60 per cent. (3s. per share) for half-year ended Dec. 31, payable Feb. 11, 1907.

Robinson Central Deep.—Interim of 40 per cent. (8s. per share) for half-year ending Dec. 31, payable Feb. 4.

Robinson Gold.—Interim of 11 per cent. (11s. per £5 share), payable Feb. 4.

Rose Deep.—Interim of 10 per cent. (2s. per share) for half-year ended Dec. 31, payable Feb. 4.

Van Ryn Gold.—Interim of 10 per cent. (2s. per share) for year ending June 30, 1907.

MISCELLANEOUS.

Bank of Roumania.—Interim of 6s. per share.

Bargang Tea.—Ad interim of 3 per cent. on the ordinary shares, payable Dec. 13.

Canada Landed and National Investment.—3 per cent. for half-year to 31st inst. and a bonus of 1 per cent., making 7 per cent. for year.

Canadian General Electric.—Usual quarterly of 2½ per cent.

Dhendai Tea.—Ad interim of 2½ per cent. on the ordinary shares, payable Dec. 13.

Eastern Extension Australasia and China Telegraph.—Interim for quarter ended Sept. 30 of 2s. 6d. per share.

Eastern Telegraph.—Interim of 1½ per cent. on the ordinary stock, in respect of profits for the quarter ended Sept. 30.

Eastman Kodak of New Jersey.—Usual quarterly of 1¾ per cent. (being at the rate of 6 per cent. per annum) upon the outstanding preferred stock, and of 2½ per cent. (being at the rate of 10 per cent. per annum) upon the outstanding common stock, payable Jan. 1.

Ghoir Allie Tea.—Ad interim of 10 per cent. on the ordinary shares, payable Dec. 17.

Gokak Water Power and Manufacturing.—At the rate of 7 per cent. per annum on the cumulative preference shares for the current half-year, also 8 per cent. on the A shares.

Hudson's Bay.—Interim of 20s. per share, payable Jan. 15.

James Deuchar.—Interim of 5 per cent.

Kelly's Directories.—Interim on the ordinary shares at the rate of 5 per cent. per annum for half-year ended Sept. 30.

Lagunas Nitrate.—Interim of 2½ per cent. (being 2s. 6d. per share) for 12 months to Dec. 31.

Lautaro Nitrate.—Interim of 6s. per share.

Melbourne Tramway and Omnibus.—Interim at the rate of 12 per cent. per annum for half-year ended Dec. 31.

Milner's Safe.—Usual interim at the rate of 5 per cent. per annum for half-year ended Nov. 30.

North British Cold Storage and Ice.—Interim for six months ended Oct. 31 at the rate of 6 per cent. per annum.

Romai Tea.—Ad interim of 2½ per cent. on the ordinary shares, payable Dec. 13.

Santa Rita Nitrate.—Interim of 7½ per cent. (being 7s. 6d. per share) for 12 months ending Dec. 31.

Sao Paulo Tramway Light and Power.—Quarterly of 2 per cent. on the capital stock.

Tilbury Contracting and Dredging.—Interim at the rate of 6 per cent. per annum for six months ended Sept. 30.

Tower Tea.—Interim of 5d. on the ordinary shares for half-year ended Sept. 30.

United Electric Tramways of Montevideo.—Interim at the rate of 6 per cent. per annum on the preference shares for half-year to Sept. 30.

W. B. Mew Langton.—Usual of 12½ per cent. for year ended Sept. 30.

Welsbach Incandescent Gas Light.—Interim of 6 per cent. per annum on the preference shares for half-year ended Sept. 30.

Company Reports and Balance Sheets.

*** *The Editors will be much obliged to Secretaries of Joint Stock Companies if they would kindly forward copies of Reports and Balance-sheets direct to the Office of the* Investors' Review, *Norfolk House, Norfolk Street, W.C., so as to insure prompt notice in these columns.*

East Indian Railway Company.

We gave the results for the half-year ended June 30 last a week ago, but the report is long and full of details interesting to stockholders and students of the economic condition of India. We therefore give some further details now. First of all the railway is 1,999¼ miles long, and of this length 2¼ miles are treble and 513½ miles double. The total length shows an increase of 27 miles on the previous half-year, and the capital cost of the property works out at Rs. 2,45,969 per mile, or at the conventional exchange about £16,397. This seems high for a single line, and probably the whole system could be constructed now for less money. The earning capacity, however, seems to be great enough to warrant the expenditure, though the nett earnings do not appear to grow with much vigour. Last half-year they amounted to £1,779,326 or about £20,000 more than in the first half of 1905, but the increase in gross receipts was about £153,000, so that working expenses went up. They rose, indeed, to Rs. 1 12a. 9p. per train mile, an increase of 1a. 5p. on the corresponding half-year. As the gross receipts were just one anna per train mile smaller it followed that the nett earnings fell from Rs. 3 3a. 4p. to Rs. 3 0a. 11p. Working expenses, however, are still low, amounting to only 37.06 per cent. of the earnings upon the entire traffic, and we fear they must continue to grow for various reasons, not least because wages go up as the cost of living is enhanced by the decreasing purchasing power of a debased currency. It is noticeable that the higher classes of passenger traffic show no expansion whatever; on the contrary, both first and second class passengers were fewer in number than in the corresponding half-year, although the receipts from second-class were about Rs. 2,500 more. Altogether the increase in the number of passengers was fully 1,505,000, but almost the whole of this came from third-class, and the earnings per passenger are extremely low. They fell off, indeed, last year to .2025 of a penny per mile, as compared with .2041d. a year ago. In goods traffic the total weight carried was 5,341,479 tons, of which no less than 3,305,740 tons consisted of coal. No other class of goods handled reached 250,000 tons in bulk, and there were decreases in the weight and earnings from cotton, grain, mineral oils, railway plant and piece goods as well as in minor items. Of the entire weight of coal handled 501,117 tons were carried for other railways and the company's consumption of fuel involved the carriage of 304,298 tons. Adding in this, the above given aggregate of coal and coke handled by the company in the half-year was 3,610,038 tons. The bulk of this traffic was eastward, only 781,958 tons out of the whole weight being carried westward. A considerable export trade in coal appears to be developing, but the total sent out last half-year from Calcutta was only 1,548,440 tons, most of which was carried by the East Indian Railway. It is also getting increased business in iron and steel, in spite of the lamentable position of the Bengal Iron and Steel Company. The trade in salt also grows, but not in any conspicuous fashion, the increase being only 731 tons in the half-year. Many of the classes of goods handled show continual fluctuations, as the harvests vary, but it is noticeable that the increased weight of cotton piece goods carried was accompanied by a decrease in the amount earned, and this contrast is explained by the larger short distance traffic in Indian piece goods which was accompanied by a decline in the long distance traffic in European cotton fabrics. The sugar trade was affected by the failure in the cane crop of the Punjab and the United Provinces, and this brought a heavier importation at Calcutta of European beet and foreign cane sugar. At the same time the crop in Bengal was good so that the half-year's business in this staple was the best on record, the weight having risen by 9 per cent. and the earnings by 73 per cent., the haulage being much longer. Wheat fell off by no less than 89,791 tons, and this is explained by a smaller production in the provinces served by the railway and by the absence of any demand for export, nearly the whole quantity moved being for internal consumption. The company owns collieries of its own, and last half-year raised 315,868 tons, of which 254,746 tons were steam coal. The cost at the pit's mouth was Rs. 1 13a., a decrease of 1a. 3p. on the cost of the corresponding half-year, but the quantity mined was 419 tons less. The directors state that a far-reaching measure for the general reduction of the coal rates was adopted during the past half-year and came into effect on the 15th ult. This is expected to give a great impetus to the consumption of coal all along the line of the railway. A strike of native employees was threatened, but came to nothing, and the traffic of the line was never interrupted.

Bengal-Nagpur Railway Co., Limited.

During the half-year ended June 30 last this company's capital expenditure reached £303,822, making a total to date of £19,017,200. In addition to this there were stores and other amounts in suspense reaching £437,314, so that the actual outlay under all heads was £19,454,514. Against this the actual capital received, including special advances made by the Secretary of State, came to £19,474,984, so that at the end of the half-year there was a very small credit in hand. The expenditure was mainly on the construction of sundry branch lines and on additional rolling stock, and in view of the further important extensions which are either being built or contemplated, the company's capital expenditure promises to be on a fairly lavish scale for some time to come. Fortunately the business done seems to justify the outlay, and the gross earnings for the period under review came to Rs. 1,45,53,479, being an increase of Rs. 12,01,896, or more than 9 per cent. compared with the corresponding period. The receipts per train mile were Rs. 281 against Rs. 258, and the fact that within two years the revenue per mile has increased no less than Rs. 72 seems to indicate that the policy of extensions is carried out on prudent and far-seeing lines. Last half-year the working expenses were up by Rs. 4,29,023, at a total of Rs. 62,10,746, leaving the nett earnings larger by Rs. 7,72,873, at a total of Rs. 83,42,733. The total number of passengers carried was greater by 451,858, bringing in additional receipts of Rs. 6,12,733, and the directors report that the improvement in both numbers and revenue extended to all classes of traffic. The goods traffic showed a good deal of variation, as is perhaps inevitable on a system of such size, and we learn from the abstract of principal commodities carried that the chief gains were in coal, metal, timber, and rice, while there were heavy decreases under wheat and wheat flour, gram and pulse, raw cotton, rape and mustard seeds, and salt. The nett result is an increase of 294,051 tons, and in the revenue of Rs. 5,05,072. The expenditure on maintenance was very largely reduced, and there was also a fair decline under special and miscellaneous outlay, but other items went up, locomotive expenses, carriage and wagon outlay, traffic expenses, and the steamboat service all showing important advances. Under the contract with the Secretary of State surplus profits depend upon the nett earnings for the complete year ending December 31 exceeding the guaranteed interest for the same period. For the past year the available nett earnings were Rs. 82,91,755, and the guaranteed interest Rs. 50,46,200, leaving an excess of earnings over interest of Rs. 32,45,555. This is an increase against last year of Rs. 6,03,766, and although the amounts are subject to some adjustment, the outlook for the stock-holders at the end of the year is decidedly promising.

Barsi Light Railway Co., Limited.

This small Indian company did not do so well on its original line during the 12 months ended June 30 as in the preceding year. The revenue from all sources was Rs. 1,66,916 against Rs. 2,00,242, and as the expenses could only be reduced by

Rs. 7,762 to Rs. 78,392 the nett revenue of Rs. 88,524 suffers to the extent of Rs. 25,564. The rather important decrease of 21,623 tons took place in the weight of goods handled, meaning a loss in income of Rs. 42,074, and this was only partially compensated by an improvement of Rs. 8,748 in the passenger traffic and sundry receipts. The proportion of working expenses to gross income was 46.96 per cent. against 43.02 per cent., and it is doubtful if even the decrease shown would have been brought out except that a proportion of the fixed charges were debited to the extensions in terms of the contract with the Secretary of State. After deducting Indian income-tax the nett earnings prdduced in sterling a sum of £5,748, which is reduced to £5,514 by sundry small charges. It is raised again to £8,727 by the balance brought forward, from which an interim dividend of 2½ per cent. was paid on July 13 last. The directors now propose to pay a further dividend of 3½ per cent., besides a bonus of 2 per cent., making the total return 8 per cent. for the year, or 2 per cent. more than in 1904-5, despite the decline in business. The balance carried forward, however, is reduced to £2,727. The Tadwala extension of nearly 27 miles was opened throughout for traffic on May 1 last, well within the time limit (February 26, 1907), mentioned in the contract with the Secretary of State. The share capital has, with the exception of a trifle for calls in arrear, been fully paid up, and will rank with the original line shares for dividends in respect of all profits earned by the open lines from July 1 last. Up to that date interest at 4 per cent. per annum during construction has been paid, the nett earnings being applied in reduction of the interest on capital so paid. Another extension, that to Pandharpur, of rather more than 30 miles, was opened throughout on the 1st inst., also well within the contract date, which was fixed at June 30, 1907, and the £140,000 of 4 per cent. debenture stock issued in connection with this addition to the system has been fully paid up. Negotiations are proceeding for the construction of certain lines within the territory of His Highness the Nizam, and application has likewise been made to the Government of India for a concession to construct a line from Pandharpur to Miraj on the Southern Mahratta Railway, a distance of 83 miles. No final decision has yet been come to, but sanction has been given for the preliminary surveys of the line to be carried out by the Barsi Company, the cost to be defrayed out of public funds. As soon as the directors are in a position to submit these proposals in a complete form the shareholders will be called together to ascertain their views.

Burma Railways Co., Limited.

This company's accounts cover a complete 12 months to the end of June, and in that time the total gross earnings were Rs. 1,56,58,506, or a very trifling decrease compared with the previous 12 months. The working expenses, however, were larger by Rs. 4,73,224, so that the nett earnings go down from Rs. 65,36,286 to Rs. 60,22,408, and the percentage of working expenses to the total income was 61.54 against 58.37. The passenger traffic was practically identical with that of the previous year, and the directors consider that a satisfactory result, taking into account the spread of the plague in Burma and the fact that numerous interruptions to traffic were caused by unprecedentedly severe floods. The total goods earnings were likewise very similar in the aggregate, but the traffic in paddy was some Rs. 2,00,000 less, owing to damage by floods, and there was also a falling off in the carriage of spices and provisions for which the directors can advance no explanation. Against these losses a considerable number of minor increases are reported, the principal being under stone and lime, and, owing to the difficulty of obtaining wood fuel, a large increase occurred in the carriage of coal for working the line. This item, however, really appears on the expenditure side of the account, and does nothing to improve the nett results. The important rise in expenditure already indicated was partly on account of flood damages and partly due to the necessity of strengthening the girders owing to the introduction of heavier engines, while more active ballast operations and conversion of old goods stock and renewal of axles helped to swell the outlay. An increase under traffic expenses is attributed to the opening of intermediate stations, to increases in salaries, and to the grant of special allowances to the staff located in Rangoon. Special and miscellaneous expenses were also on a heavier scale, due to a large payment for arrears of municipal rates and taxes, to higher conservancy charges consequent on the prevalence of plague, and to expenses in connection with the visit of the Prince and Princess of Wales. The last-named item will ultimately be recovered from the Government, to fall on the shoulders of the unfortunate natives instead of the shareholders. Including £23,085 standing to the credit of nett revenue, the sum available for dividend is £60,028, and the directors recommend a dividend of £1 18s. per cent., making, with the 2½ per cent. guaranteed, a gross return for the year of £4 8s. per cent. This will absorb a sum of £38,000 and leave £22,028. Capital outlay during the period now being reviewed was Rs. 21,77,072, and the directors say that the 85 lakhs arranged to be advanced by the Secretary of State at 2½ per cent. has now been practically exhausted, only 1½ lakhs remaining unappropriated. Agreements have therefore been made for the provision of further funds on capital account, and the directors have issued to the shareholders a lengthy explanatory statement setting forth the actual proposals.

Lima Railways Co., Limited.

This company's business made no real progress in the half-year to June 30, the receipts being almost the same as in the corresponding period at a total of £21,153. It seems, however, that the goods revenue was larger by £2,783, while the passenger income and contribution from the Chorrillos Electric Tramway Company gave £2,305 less. The last-mentioned movement is partly due to the suppression of the passenger service on the Chorrillos section, and for the same reason the working expenses have been lowered from £20,895 to £17,154. The balance of nett revenue is therefore £3,998 against £108, so that the directors are able to meet debenture interest and other charges with a small credit remaining of £322 against the debit last year of £3,051. The ratio of working expenses to receipts looks enormous at 81.23 per cent., but for the corresponding period it was no less than 99.49 per cent. After a good deal of delay all the points of difference between the railway and the Santa Rosa Electric Power Company, which is to lease the company's lines, have been settled, and the directors expect the documents to arrive in England towards the end of this year. Application will then be made to the courts for the ratification of the scheme on behalf of the debenture holders, and a proposal will be formulated for the reorganisation of the finances. Under the agreement the company is to receive a rental of £16,000 per annum, including £5,000 now paid under the arrangement already in operation with the Chorrillos Electric Tramway Company. The directors have been approached by the Government of Peru for the surrender of the San Juan de Dios station, the occupied space being required for improvements to the City of Lima, and the directors have intimated their willingness to give up the ground if the lease of the Lima Callao section is made perpetual.

Paraguay Central Railway Co., Limited.

A good deal of interest has been aroused in this company's securities during the past year, partly because it was known that the ordinary business of the company was showing some improvement and partly on rumours that a settlement of the claims against the Government might be anticipated. Shareholders have already heard that on September 1 last a definite agreement was signed between the Paraguayan Executive and the company's representative in Asuncion for the settlement of all outstanding questions. This is now being considered by the Paraguayan Congress, and should the measure be satisfactorily carried through, a meeting of the debenture stockholders will be convened to discuss the present position and to consider the best means for future developments. Given a fair chance, the company ought to be able to effect much greater improvement in its business, and we gather that on top of the excellent increase shown for the past year a further improvement in gross traffics has occurred, helped by an advance of 40 per cent. in the tariffs and a concurrent decline in the gold premium. For the 12 months to the end of April last the total gross income was £55,208, being an increase of £13,254, and as the working expenses were only £5,912 larger at £32,039, the nett receipts improved by £7,341 at a total of £22,569. The increase in revenue was well spread over all branches of traffic. Including the balance brought forward and other small items the total nett credit is £29,879, but as in previous years the nett income has been partly employed in the purchase of plant and materials for the renewals and upkeep of the rolling stock and property. The sum so spent during the past year was £12,408, leaving the considerable sum still in hand of £17,471, and it is believed that the necessity for this extra outlay has now almost ceased, and that the nett receipts will shortly become available for the purposes of the company. At the present time the company is earning nearly 2½ per cent. on its debenture stock, the full payment for the year requiring a sum of £50,700. Nothing, of course, has been paid for a great many years now, owing to the default by the Paraguayan Government in the guarantee of interest, and it is rather instructive to note from the accounts that the amount due to date from the authorities is no less than £1,500,330. Of this £737,489 is owing to the debenture stockholders, and there is a nominal credit to revenue account of £842,948, but it is very doubtful if any of these debts can be recognised when the time for settlement comes, simply because the Paraguayan Government is without the means to liquidate them even if it had the will.

Western Australian Bank.

A further shrinkage of £659 to £24,059 took place in the nett profits for the six months ended June 30, and as £8,070 less at £29,508 was brought forward the amount available came to £53,567 compared with £62,302 a year ago. The directors, however, repeat last year's dividend at the rate of 20 per cent. per annum, although the paid-up capital is now £125,000 against £150,000, and put another £25,000 to reserve, making it an excellent total of £350,000, but on this occasion the staff gets no bonus against £3,350 and the balance forward is £7,885 smaller at £13,507. In addition to the further resources provided by the fresh capital deposits rose by £47,330 to £2,028,727, deposits not bearing interest being £34,489 up at £1,161,233 and those bearing interest £10,830 lower at £867,494, but notes and bills in circulation showed a small decrease at £144,662, and balances due to other banks were £15,904 down at £81,207. On the credit side bills receivable and other advances were £228,282 higher at £1,662,740 and small increases in amounts due to other banks and remittances in transit have been accompanied by a reduction of £17,062 to £938,102 in specie and bullion in hand.

Imperial Bank of Persia.

The operations of this bank were again fairly successful during the year ended September 30, and the gross profit of £119,471

showed an increase of nearly £10,000 compared with the previous 12 months. The working expenses were up £4,585 to £52,189, and the nett profit of £67,282 is larger by £5,339. Of this £4,037, or the odd £37 more, is due to the Persian Government, income-tax takes considerably more at £3,315, and £15,000 has been already distributed for the usual interim dividend of 3s. per share. The directors now recommend the transfer of £5,000 more at £20,000 to the reserve fund, and the payment of a final dividend of 5s. per share, making 8s., or the same as before for the complete year. The sum then carried forward is £10,953 against £11,023 brought in. The reserve is now raised to £150,000 against the paid-up capital of £650,000. A sharp drop from £526,479 to £460,911 has taken place in the note circulation, but the deposits, practically the whole of which are kept in Persia, have risen by quite £100,000 to £527,460. Bills payable, endorsements, and adjustments amount to £177,586 against £217,764, while on the assets side the bills discounted, loans and advances have increased nearly £200,000 to £974,583. This total takes into account temporary advances to the Persian Government in excess of the amount authorised by the concession. Investments are slightly larger at £404,553, but the actual cash balance has been reduced by £74,979 to £449,506, and the money lent in London at call and short notice is down from £115,000 to £25,000. Bills receivable are £115,560 against £140,339, and the balance-sheet aggregates £2,001,910 compared with £1,986,386.

Provincial Tramways Co., Limited.

The greater part of the Gosport and Fareham system belonging to this company was opened in January last, and apparently had a beneficial effect on the income for the year ended September 30, as the nett revenue received from its tramways increased by £6,943 to £30,993. With £2,752 or £744 less brought forward and £27 from transfer fees, the total receipts were £6,207 larger at £33,772, but interest charges required £3,090 more at £3,885, and after meeting administration expenses, income-tax, &c., the surplus available was £27,559 against £24,471. Of this an additional £2,000 at £9,000 is written off for depreciation, and the dividend on the ordinary shares is increased by 6d. to 7s. 6d. per share, leaving the larger balance of £3,217 to be carried forward. Capital expenditure in the twelve months amounted to £67,887, making the total to date, after deducting the sums received from Portsmouth and Cardiff, £474,972, and as the issued share capital is only £349,120, the company has either issued or deposited as security for loans £101,500 debentures and owes a further sum of £21,507 to local companies. Cash stands at £5,900, but £5,605 of this will be needed to pay the final dividend just declared, so that the liquid resources are too slender to be comfortable, and under the circumstances it would have been more prudent if the directors had refrained from increasing the dividend. In order to discharge the liabilities on capital account £150,000 in 4½ per cent. first debentures has been created, which will be offered to the shareholders in the first instance. Notice has been given by the Cleethorpes District Council of its intention to purchase the power station of the Grimsby and Cleethorpes system, and a satisfactory price has been fixed, but the company is to retain possession of the station for five or seven years from 1905 at the option of the local authority. The question of writing off lost capital which was referred to the shareholders in June, 1905, and apparently received their assent, has not yet been settled, but the directors are still considering the matter.

Bowden Brake Co., Limited.

The descent in the profits of this business from the high water-mark of 1902-3 has been extraordinarily rapid. In that year the company earned a nett revenue of nearly £29,000, but for the 12 months to September 30 last the similar income was only £5,729. For last year it was £6,315, and for the year before that £7,588. The gross revenue in the past 12 months was £16,401, and transfer fees were £38, but trade expenses took £10,345, depreciation £65, and directors' fees £300. Including £536 brought forward, there is a disposable sum of £6,265, which would have given a very fair return on the issued capital, fortunately small at £40,061. The directors, however, have decided to take £2,000 from the reserve fund in order to pay a dividend of 20 per cent. and carry forward the trifle of £253. It is said in the report that the demand for Bowden brakes in various styles and marks has largely increased during the year, so we must assume that expenses have been higher or the price of the articles has not been so remunerative as hitherto. To give credit where it is due, it must be confessed that the provision of the £2,000 taken from the savings is a very easy matter. The company has a reserve fund of £17,409, and investments we believe in good class securities of £31,069. Last year this reserve stood at £20,000, but the company seems to have incurred the rather heavy expense of £2,178 in defending its patents, and £412 has been applied to make good the depreciation on the investment mentioned, reducing the account to £17,409 as already referred to. It will now be further lowered to £15,409. Only £3,117 is owing to trade and other creditors, while the book debts are £9,709, and the licence, patents, and goodwill are entered at £5,201.

P. Phipps and Co., Limited.

The issued share capital of this important brewery business is £627,925 and the debenture stock is £500,000, besides mortgages and loans with interest of £160,286. The freeholds, leaseholds and goodwill have a balance-sheet value of £1,270,856, and it is probably fortunate that the company has a fairly substantial reserve of £160,000. This includes £5,000 added from the past year's profits, and we note that £10,000 has been set aside to a breweries depreciation account. The reason for this is not mentioned in the report, but we should not be surprised if it were in some way connected with the properties referred, or likely to be referred, for compensation. In dealing with brewery accounts during the past two or three weeks we have been struck with the frequent difference between the book value of licensed properties and the amount given under the compensation awards. If the accounts are to be kept straight and unburdened with valueless assets it will in all cases be necessary to meet such difference out of the profits. In a good many cases this must mean a serious drag on the revenues, and only those companies possessed of substantial reserves, unfortunately very few in number, can face the prospect without anxiety. Various other assets belonging to the company which might be mentioned are the machinery, plant, rolling and other stock £71,004, and loans on mortgage and other securities £29,730. Rents receivable, book debts, &c., are valued at £44,475, against creditors and rents payable of £27,580, stock is worth £75,560 and cash is £31,919 apart from £1,125 in the hands of the debenture trustees. Gross profit on brewing and from the sale of wines, spirits, &c., for the year to September 30 was £166,355, rents were £26,704, and interest and transfer fees £2,152. Various general expenses, the allowance for repairs, and interest on the debenture stock, mortgages, loans, &c., reduce this to £71,481, but £15,777 was brought forward, and the disposable sum is £87,258. The year's preference dividend requires £8,750, and after paying 10 per cent. on the ordinary shares the appropriations already mentioned are made, and the sum carried forward is slightly improved to £16,215.

British and Japanese Finance Corporation, Limited.

This company submits a statement covering the period from September 26, 1905, the date of incorporation, to September 30 last, but we fear it will not bring to the shareholders very much satisfaction. The authorised capital is £601,000 in 120,000 ordinary shares of £5 each and 20,000 deferred shares of 1s. each, but up to the present only £93,000 in ordinary shares and £715 in deferred shares have been issued. That is fortunate, because the company has not managed to make a real start during its first year. It seems that numerous large offers of business were from time to time made, and received careful consideration, but nothing satisfactory resulted. This the board attributes partly to the unsatisfactory state of the European financial markets and partly to the fact that banks and financial houses have been giving terms to Japanese borrowers which left little or no margin of profit and encouraged borrowers to ask impossible terms, thereby precluding further operations for the time being. As proof of this the directors say the majority of the Japanese issues in London during the past year are at present quoted on the stock markets at a discount. The chairman, however, seems to have been to Japan and investigated various proposals, which may later on lead to profitable business, which is not exactly a cheering prospect for those who looked for an early return on their investment. Meanwhile the greater part of the funds have been placed as a short loan on the Stock Exchange against high-class securities, and we note from the balance-sheet that £70,000 has been so applied. The cash kept at the bankers or in hand is £19,269, and there is an investment at cost £1,375. General expenses for the twelve months were £4,343, notwithstanding that the directors waived £950 of fees, and the preliminary expenses including cost of registration reached £2,148. On the other hand, sundry receipts for interest, transfer, and other fees were £2,493, and the debit to these accounts is therefore reduced to £3,998.

Willer and Riley, Limited.

This business of wholesale provision merchants seems to have increased its profits during the year to September 8, but the directors do not take the opportunity of declaring an increased dividend. They think it better policy to place the extra revenues to reserve, particularly in view of the fact that the company has recently been appointed agents for some of the largest butter and cheese factories in Australasia. It is expected that this will lead to a great improvement in business during the coming season, and the directors evidently want to have as much money in hand as possible in order to comfortably finance it. Moreover, the reserve fund even now is only £13,000, and the business is heavily dependent upon floating debts. Sundry creditors and bills payable, for example, are no less than £242,337 against book debts, advances on consignment and bills receivable of £185,292. A further sum of £156,030 is represented by stock, and the cash balance is only moderate at £23,861. The freehold premises have a balance-sheet value of £8,466, but the goodwill, including trade marks, factories, furniture, &c., is down for £112,839, so that a good deal of caution is necessary if the business is to be conducted successfully and the finances kept reasonably sound. The profit for the period under review was £17,481 and £1,695 was brought in, making a total of £19,177. The preference dividend at 6 per cent. takes £7,125, and after paying 6 per cent. on the ordinary shares £4,000 is added to reserve and £2,352 is carried forward.

Santiago Nitrate Co., Limited.

The report of this company for the twelve months ended June 30 again presents an unfavourable contrast to the majority of undertakings in the same industry, as in a time of great prosperity it has to confess to a further sharp decline in earning power. Gross profits, including £15 from transfer fees,

amounted to £58,484 compared with £63,923, and after meeting debenture interest and other charges the nett balance was £4,403 down at £51,056. Of this debenture redemption took £13,245 or £600 more, and in addition to writing the usual £1,000 off debenture issue expenses £9,712 was written off for renewal of plant, &c. A year ago dividends of 15 per cent. were paid and £11,814 was applied, with £186 taken from reserve, in wiping out the cost of new grounds, but on this occasion the directors feel themselves unable to make any distribution on the shares owing to the heavy burden of debt, and transfer the surplus of £27,099 to reserve to go towards extinguishing the loans from the bankers for current working expenses. Allowing for the £12,600 debentures paid off, the property account has been reduced by £24,600 to £233,574, but the oficina Mapocho still stands at the old figure of £29,161, and against these the reserve will now amount to £59,913. Liabilities on bills payable and to sundry creditors, including advances on nitrate, are £8,659 up at £118,996, but sundry debtors have risen to £67,400, and cash is £2,682 lower at £14,316. Stocks of nitrate, &c., are valued at £47,070 and stocks and stores, including animals, carts, &c., at £19,490, and debenture issue expenses yet to be written off amount to £2,639.

Esperanza Nitrate Co., Limited.

A miserable display is made by this company for the year ended June 30, and the directors ascribe the failure to earn a decent profit to the poor quality of the raw material worked and to the increased cost of labour. They do not hold out much hope of a substantial improvement until the new grounds at Blanca Union are opened up, when they expect that the renovated maquina and the railway now being built will enable them to produce nitrate at a reasonable cost. It is as well, perhaps, that they are able to indulge in anticipations of this kind, as the results for the twelve months were far from encouraging. Trading profits fell off from £12,003 to £3,817, while outgoings, although the directors gave up £375 of their fees, were £671 heavier at £3,144, leaving nett profits £8,857 down at £673. To this was added £171 brought forward, giving a total of £844, of which £400 is written off repairs to machinery and £444 off development account. The instalments received on the issue of £70,000 7 per cent. debentures made during the year provided £39,700 or sufficient to pay off the £20,000 8 per cent. debentures and some other debts, and the remaining calls will be utilised to reduce the loans from bankers and to complete the equipment of the oficina. In the meantime the debt to the bankers has risen by £16,211 to £37,965, and £8,840 or £3,567 more is due to sundry creditors, against which stocks and stores are valued at £18,273, sundry debtors owe £13,618, and the company has £5,158 in cash. Dead assets such as repairs to machinery £2,111, development account £1,357, and cost of issuing and underwriting 7 per cent. debentures £4,444 are decidedly heavy. The property account, too, seems overvalued at £46,823, considering that the nitrate grounds at the Esperanza oficina are on the directors' own showing so far worked out as to be unremunerative, and altogether the position is far from being satisfactory.

Pacific Nitrate Co., Limited.

This company was only formed in July, 1905, and during the period to June 30 last was engaged entirely on construction work, so that there was no revenue coming in. All the plant is now in Chili, and the production of nitrate commenced at the oficina Amelia on October 25, while it is hoped that the oficina Celia will be completed and working in the first half of 1907. The actual cost of the nitrate grounds acquired was £192,168, and since then £153,281 has been spent, of which £35,406 was in London and £107,337 in Chili, on plant, &c., £3,003 went for administration expenses in London and £7,535 for debenture interest, less interest allowed by bankers. In addition preliminary expenses came to £796 and debenture issue expenses to £11,237, making a total outlay of £357,482, against a share and debenture capital of £350,000. Owing, the directors say, to the extraordinary congestion at the port of Antofagasta causing very heavy expenses and delays, coupled with the consequent necessity of laying in abnormally large stocks at the oficinas, the working capital provided when the company was formed will be insufficient to complete the construction of the works. Arrangements have therefore been made to borrow the necessary funds from the bankers, and it is no doubt chiefly owing to these that liabilities to sundry creditors and bills payable come to £15,968 and £30,000 respectively. Out of the money thus raised the company has £35,235 cash on deposit and £3,089 in hand to keep it going for the time being. When the company was formed the directors talked of getting a nett quota of 1,250,000 quintals under the combination, and they now announce that they have obtained 600,000 quintals for Amelia and 800,000 quintals for Celia.

Tricolor Nitrate Co., Limited.

This is a new company formed in the early part of 1905, and the accounts now submitted cover the period from June 10 of that year to June 30, 1906. Work at the oficina had not commenced at the date of the accounts, and no profit and loss account is therefore submitted, but the balance-sheet shows that the cost of erecting the plant, machinery, and buildings, including administration expenses in Chili during construction, was £55,961. A further £600 has been spent on machinery now in transit, making a total of £56,561. To that must be added the purchase price of the oficina Tricolor, £65,500, bringing the total outlay to date to £122,061. In addition to this the sum of £5,203 has been laid out on animals, carts, harness, &c., and stores represent a value of £7,105. Then the expenses of issue and discount on debentures were £7,144, and administration in London, debenture interest to date, and preliminary expenses and underwriting commission altogether absorb £8,861. The company has the small cash balance of £1,180, and already it has been necessary to raise advances of £17,000 from bankers on the coast. The issued share capital is £75,000, out of the £100,000 authorised, and the debenture debt is £55,000, but it appears that since the formation of the company the cost of materials and the price of labour in Chili have considerably increased, and further funds must be provided to complete the machinery, plant, and equipment. It has, therefore, been necessary to make arrangements to issue the remaining £25,000 of authorised capital, bringing the total to the full amount of £100,000. The oficina was completed and production of nitrate on a small scale commenced about the middle of September, the company's quota of 507,500 quintals being fixed as from September 1 last, so that in the current year we shall be able to see how the company is likely to do.

London Scottish American Trust Company

The valuation of the investments held by this company on October 31 showed that their value exceeded the figure at which they stand in the balance-sheet by about 3 per cent., not a large excess it is true, but it is something in these days to have a balance on the right side at all. The total of these securities with accrued interest was £1,452,537, and although the cash held was only £10,397 a temporary loan of £17,000 has been raised. The total of the capital, including debenture stock, is £1,250,000, and the reserve funds, which are, of course, included in the total of investments already given, are quite intact. Total revenue for the year ended October 31 was £89,974, including £3,648 brought forward and a profit of £17,000 on realisation of securities. This goes against an income of only £78,417 in the previous year, but then the profit on securities was only £9,773 and £506 less was brought forward. Debenture interest amounts to £19,000 and management expenses and auditor's fee £6,345, leaving £64,629. The dividend on the preferred stock of 4½ per cent. takes £16,031, and after raising the deferred dividend by ½ per cent to 6½ £20,000 or £5,000 more is added to reserve, and the balance forward is substantially increased to £5,431.

Yates's Castle Brewery, Limited.

This company's capital operations for the year ended September 30 resulted in a reduction of the property account by £1,343 to £576,830 and of the brewery plant, &c., by £403 to £5,407. The short leases account now appears at £1,598 and fixtures and fittings at £1,038. Certain expenses connected with the debenture stocks and compensation paid for the surrender of a licence, together amounting to £2,595, have been written off by transfers from the reserve funds, with the help of about 24s. from the profits. After making these deductions the total reserves amount to £4,450 apart from a premium of £2,250 on £75,000 mortgage debenture stock issued by William Yates and Co. Very little is possessed in the way of liquid resources, notwithstanding that various floating liabilities and sundry mortgages appear at a total of £46,827. After providing a larger sum than in any previous year for repairs and improvements the balance of profit for the twelve months to September 30 was £19,140, from which the interest on mortgages, loans, and debenture issues required £15,244, leaving £3,896. This is further reduced to £1,813 by the compensation fund charge and again increased to £2,504 by the balance brought forward. We gather that the directors intend to carry forward this credit, and they point out that the arrears of dividends on the preference shares which have accrued since September 30, 1902, will form a first charge on future profits available for distribution. Not a very cheering prospect!

Cheshire's Brewery, Limited.

This is one of the few provincial brewery companies whose financial position seems to be at all satisfactory, and which can properly justify a high dividend on the ordinary shares. The subscribed share capital is £248,470, against which the mortgages and secured loans are only £81,841, or less than one-third. There is a reserve fund of £130,000, and although it is invested entirely in the business, it provides a good barrier against possible depreciation in the freehold and leasehold houses, the auditors pointing out that nothing has been written off the freehold properties. These, with the leaseholds, have a balance-sheet value of £406,480, the additions for the past year being £18,142, and the allowance for leasehold depreciation £4,498. The brewery property, plant, and fixtures stand at £37,432, and casks, horses, carts, &c., at £8,618. Sundry creditors reach £20,160, against debtors, mortgages, and secured loans of £22,166, stock is £21,293, and the cash balance is not very startling at £12,652. After making provision for depreciation of leaseholds and bad and doubtful debts the nett profit for the year to September 30 was £17,020, and £8,372 was brought forward, making £25,401. From this credit the full year's dividend on the preference shares accounts for £7,125, and besides paying 15 per cent. on the ordinary shares the directors can add £15,000 to reserve, raising it to the figure named, and increase the carry forward to £0,244.

Alton and Co., Limited

Against an issued share and debenture capital aggregating £550,000, this company's brewery, licensed houses, and other property have a value of £494,472. In addition to this plant, machinery, casks, &c., are entered at £18,482, and furniture and fittings in hotels and other premises at £3,579, so that in the

complete absence of reserve funds the company is rather poorly supplied with liquid resources. Rather more than £11,000 is owing to sundry creditors against book debts, rents, loans, &c., of £32,144, and stock-in-trade of £14,089. The total cash balance comes to £16,172, including £4,847 held by the debenture holders' trustees, and the credit to profit and loss is £12,875, apart from debenture interest provided, but unpaid, to the amount of £5,000. The profit for the year to September 30 was £33,283, which is reduced by sundry charges, and £1,511 payable to the compensaation fund to £26,848. The balance brought forward was £1,027, making £27,875, from which debenture interest and preference dividend require £20,000. A dividend of 5 per cent. is then proposed on the ordinary shares with £1,500 written off value of leases account and £1,375 carried forward.

Ushers' Wiltshire Brewery, Limited.

A further increase of £3,630 to £26,628 was secured in the gross profits for the twelve months ended September 30, and after providing for all charges, including £1,804 for bad debts and leases of public houses written off, and £470 for estimated depreciation in property in consequence of the loss of a licence, the nett balance was £14,113 against £12,798. Debenture interest having been met and the usual £2,000 allowed for depreciation the amount available, with £2,255 from the previous account, was £2,379 larger at £11,281, out of which the ordinary shares again receive 10 per cent. and £2,000 is applied in extinguishing the expenses of the debenture issue, leaving £3,278 or £1,023 more to be carried forward. Capital expenditure, after allowing for £8,000 written off out of reserve, amounts to £150,932, and in addition to the share capital of £70,000 the company has obtained £72,218 on debenture stock and £17,716 on mortgages and loans, while the reserve of £18,000 is also employed in the business. Liabilities to sundry creditors are £1,674 down at £10,816 against increases of £1,109 to £22,696 in sundry debtors and £2,385 to £5,404 in cash, and as stocks are moderate at £19,503 the position seems if anything a little sounder than at this time last year

West Cheshire Brewery Co., Limited.

This company's share capital is £200,000, and there is first mortgage debenture stock to the amount of £128,300. Various properties have been mortgaged to the extent of £31,949, a further sum of £14,506 is due to sundry creditors, and £5,600 has been already borrowed from bankers. Reserve fund, after providing £500 transferred to leasehold properties account and adding £1,000 from the past year's profit, is £2,300, so that the position of affairs is not exactly flourishing. A further reserve called "leases of houses" amounts to £4,854, and is to be credited to future profits. We are not quite sure what this means. The freehold and leasehold properties, including brewery premises and goodwill, have a balance-sheet value of £369,102, and by stretching things to the utmost we can make the free assets no more than £17,136, of which the cash is £61. The profit for the year to September 30 was £16,114, out of which the debenture interest and preference dividend take £11,132 and the trustees' and directors' fees £736. The sum of £1,000 is then contributed to reserve, and after providing a dividend of 4 per cent. on the ordinary shares £166 is carried forward against £120 brought in. We are not told how much the company had to pay to the compensation fund, but the directors say it represented a serious charge on the profits for the year. One beer house owned has been scheduled for compensation under the Licensing Act of 1904, but the amount has not been awarded, and the tenant is still carrying on his business.

Leeds and Wakefield Breweries, Limited.

This company's financial position is somewhat better than most of the brewery enterprises we have lately analysed. There was actually a small reduction in the capital expenditure for the past year in consequence of sales of property, and the total of £381,129 shows a drop of £313. On this the depreciation allowed for the year was just £800, bringing the total to date to £13,700, which is lamentably small; but there is a reserve fund of £46,500, which puts a rather better complexion on affairs. The total capital, however, is so much smaller than the expenditure that notwithstanding the existence of this reserve it has been necessary to raise £45,239 on mortgages and loans, the total creditors, including £4,807 on trade account, being £50,047. Loans to customers and sundry debtors, after allowing the important amount of £3,500 for doubtful debts and discounts, stand at £16,153, stocks are put in at £9,897, and £5,955 is held in cash, with about £4,500 to be still provided for dividends. Total income for the year to September 30, including £4 for transfer fees, was £27,095, and after providing expenditure of every kind and the contribution to compensation fund of £1,243 the sum left is £17,016. Interest on mortgages, loans, and debenture stock requires £7,977, and after paying the preference dividend the directors distribute 5 per cent. on the ordinary shares and carry forward £1,033 against £243 brought in.

Offilers' Brewery, Limited.

In the twelve months to September 30 the total revenue of this concern was £20,425, from which directors' fees, salaries, and management expenses absorbed £2,117 and interest £8,103, in addition to which £500 was placed to the bad debt reserve, leaving £9,705. There was also £2,065 brought forward, making £11,770, which provides the dividends of 6 per cent. on the two classes of preference shares, together with 8 per cent. on the ordinary shares, adding £2,000 to reserve and carrying forward £2,570. The reserve fund will now appear at £46,000. It is not a bad accumulation at first sight, but to make the company really strong the accumulations ought to be much heavier, because the share capital is only £100,000 and the capital expenditure is no less than £298,441. Mortgage debentures with interest therefore amount to the considerable sum of £127,812, and separate mortgages have been raised on various properties to the amount of £52,652. Debtors, however, owe £25,639 against only £10,734 due to sundry creditors, while stock is valued at £14,213 and cash appears at £5,078.

Carter's Knottingley Brewery Co., Limited.

Here is another brewery company with the very small reserve of £8,000 against the freehold and leasehold property, including goodwill, of £176,064. Fortunately, though, the debenture stock amounts to only £46,410 against the share capital of £110,000, but there are loans on mortgage with interest accrued of £28,468. Creditors are moderate at less than £1,000, and the book debts, rents, loans, &c., are entered at £7,652, stock is worth £7,226 and £9,668 is held in cash. The company does not prepare a profit and loss account for publication, but we learn from the balance-sheet that the profit for the year to September 30 was £8,718 and £2,118 was brought forward, making a total of £10,836. The preference dividend takes £3,000, and after paying 9 per cent. on the ordinary shares £1,000 is added to reserve at the cost of a reduction to £1,436 in the credit carried forward. The directors point out that the heavy charges payable to the compensation fund under the Licensing Act of 1904 adversely affected the nett profits.

Showell's Stockport Brewery Co., Limited.

A gross trading profit of £14,786 was earned by this brewery in the year to September 30, £3,086 came in from interest, rents, and sundries, and £12 from transfer fees, making a total of £17,883. Deducting certain charges of £3,064, and £14,820 is left, which is raised again to £16,111 by the credit of £1,291 brought forward. Contribution to the compensation fund appears for the first time, and requires £623, a sum of £1,495 is allowed for depreciation, repairs, and renewals, and debenture interest takes £5,600. The preference dividend is next met with £3,500, and after paying 4 per cent. on the ordinary shares the balance carried forward can be slightly increased to £1,487. There seems to have been a little trouble on the board, the directors pointing out that Mr. Wright's name does not appear as a director. They say that this gentleman did not attend any meetings after last April, and the board therefore felt it their duty, acting under the powers given by the articles of association, to declare his seat vacant. The company's reserve is very small at £6,081, against the properties account of £237,324, and goodwill of £41,804, especially as the mortgage debenture debt of £140,000 is just as large as the share capital. Balance of trading accounts is rather against the company, stock seems somewhat small at £2,470, and the cash balance is likewise not very lavish at £4,370. There are certain investments of £5,182, but their nature is not disclosed.

Redruth Brewery Co., Limited.

The trading profits earned by this small brewery business in the twelve months ended September 30 were £33,364 and £1,609 came in from other sources, making £34,973. Expenditure for the year, including debenture interest and compensation fund contribution, reduces this to £8,473, and it is raised again to £8,605 by the sum of £132 brought forward. To pay 6 per cent. on the share capital which the directors recommend requires £4,056, and the directors therefore provide £2,500 for depreciation of leases, plant, furniture, &c., adding a further sum of £2,000 to reserve, and carrying forward £49. The directors say they continue to secure licensed houses whenever the investment recommends itself, and the property and goodwill are now valued at £94,900 against which the reserve is £14,000. Plant and rolling stock, &c., stand at £13,585 and the stock in hand at £16,033. Ordinary trade creditors amount to £19,112, against boo kdebts, rents and loans £12,415 and cash £9,123, so that the company is not exactly rich. There is a further item on the credit side called King's Hotel, Falmouth, £2,431, but the fact that for the past year £1,000 was written off the furniture at this hostelry rather creates the impression that it is not a good asset. The original issue of debentures, which fell due on September 30, is being gradually paid off, but the new issue has been well taken up, and will appear in next year's accounts. It is the intention to utilise the reserve fund from time to time to redeem as many debentures as may be practicable.

Phillips and Marriott, Limited.

This company's share capital is £100,000 in equal amounts of ordinary and preference shares, and besides £100,000 in debenture stock there is a mortgage with interest to date of £1,922. General reserve, including £1,000 added from the past year's profits, is £8,500, apart from a special reserve fund against debentures of £2,000, making total savings of £10,500. These go against a goodwill account of £13,500 and freehold and leasehold properties of £166,000, the machinery, plant, &c., being valued at a further amount of £7,268. Trading accounts are rather against the company, but a fair sum is held in cash, and the concern seems to possess £22,240 in its own debenture stock, which is used to secure the current account from bankers. Profit for the year ended September 30 was £21,212, from which £4,912 was allowed for repairs and maintenance and £5,330 for

depreciation, leaving £10,970. Debenture interest, preference dividend, and directors' fees take £6,508 between them, and after providing 7 per cent. on the ordinary shares the directors add £1,000 to reserve and increase the carry forward from £975 to £1,112.

JOHN HENRY LEES, LIMITED.

After deducting £1,794 for depreciation and contribution to compensation fund, this company's profit for the year ended September 30 was £8,464, not a very lavish amount, but £1,274 better than in the preceding 12 months. With £550 brought forward, the sum for disposal is £9,014 from which debenture interest takes £1,520, preference dividend £2,850, directors' and trustees' fees £746, and income-tax £375. A dividend at the rate of 5 per cent. on the ordinary shares absorbs a further amount of £2,500 and £1,023 is carried forward. No addition is made to reserve, which therefore remains at the startling figure of £525, but capital was spent in the usual way to the extent of £2,664, raising the book value of the property to £153,779, after providing depreciation, &c., to the amount of £2,192. Short leases were increased by £266, and reduced by £482, leaving them at £2,397, and the stock-in-trade which includes carts, horses, drays, bottles, &c., was depreciated to the extent of £707, making the item £10,476. Certain repairs which cost about £805 are carried forward to be spread over the next two years, and will, of course, form a charge against the profits. The debenture debt is £40,000, against the share capital of £110,000, not perhaps a bad proportion, but the bankers have been called upon to lend £12,976, and there is a mortgage on some of the property of £1,800. Sundry creditors are rather in advance of debtors, and the cash actually in hand is £43, in addition to £2,556 held by the trustees for debenture holders which is hardly available for the purposes of the business.

NEW YORK BREWERIES CO., LIMITED.

Since the capital reorganisation of this important brewery took place its finances have been in much better shape, and besides giving a moderate return on the capital the directors are enabled to make some progress in further improving the position. For the year to August 31 the trading profit was £07,503, and after providing charges of all kinds, including £20,170 for repairs and depreciation and £12,205 for interest the balance left is £19,445. This includes a few pounds for transfer fees and with £2,513 from last year the credit for appropriation is £21,957. The directors therefore propose to pay a dividend of 3½ per cent. on the unified stock, adding £6,000 to reserve and carrying forward £2,658. The reserve fund is now £36,000, not a large sum, truly, against a capital expenditure of £653,540, but larger appropriations are not really possible unless the shareholders are to be further sacrificed. The company only owes £28,554 to sundry creditors, whereas the sundry debit balances amount to £137,759, including loans to customers and current accounts, and the cash balance is £19,760. Stock is valued at £28,003, and, take it altogether, the position might be a great deal worse.

ELYSEE PALACE HOTEL CO., LIMITED.

For the year to September 30 the trading profit of this palatial French hotel, after charging £11,928 for maintenance and upkeep, amounted to £44,502. From this interest on the heavy debenture debt takes £16,926 and £1,477 is allowed for debenture redemption. The directors then add £2,000 to reserve and write off £2,568 from the debenture stock issue expenses, after which various other charges amounting to £3,866 are met and £17,665 remains. Add to this the sum of £8,821 brought forward and the credit for disposal is £26,485, so that the directors again provide dividends aggregating 1s. per share or 5 per cent. and substantially increase the carry forward to £12,185. It is satisfactory that no increase is proposed in the dividend, because even with the sum now added the general reserve is only £5,000 and there is still £19,500 to be written off in connection with the underwriting and issue of £250,000 debenture stock. We must also take into account that there is an item of £33,000 on the credit side of no practical value, being the equivalent of shares allotted for the surrender and cancellation of the deferred shares, a business which can only be described as a misfortune. Capital expenditure on the hotel is the heavy figure of £601,268, and if shareholders are to continue to have even the small dividend at present paid there is not much prospect of building up substantial accumulations against this great total. It may, however, be remarked that besides the general reserve there is a debenture stock redemption account of £5,101. Sundry creditors are not very formidable at £11,570, considering the size of the establishment, but debtors are smaller still at £7,959, stocks and stores are valued at £9,991 and the cash balance is £25,953.

BARTHOLOMAY BREWING CO., LIMITED.

For the year ended September 30 the American company reports an increase in the sales of beer of 35,866 barrels, which is attributed partly to better weather and increasing prosperity of the community and partly to an advance in loans. This improvement has led to an increase in the profits of £14,117 at a total of £89,095, and after providing all charges, including repairs, depreciation, and debenture interest, the balance over is £18,064 compared with £12,604. With £2,042 brought forward the disposable sum is £20,106, and the American company declares a dividend equal to £18,070, being an increase of £5,750 against the preceding 12 months. This dividend is brought into the profit and loss account of the English company, making with transfer fees and interest a total of £18,268, from which London expenses amount to £1,342, and travelling expenses to £100, leaving £16,816. The directors therefore propose to pay a dividend of 9s. or 4½ per cent. on the preference shares against 3 per cent. only for the previous 12 months, and 2 per cent. for the year before that, carrying forward £1,921 against £1,845 brought in.

CASWAL, LIMITED.

The directors of this concern seek to neutralise any adverse comments by asking shareholders not to attach too much importance "to fanciful quotations in the company's shares occasionally sent out by brokers who may be wishing to 'bear' the company's shares for speculative purposes." It is hard, however, to believe that there can be any speculation in the securities of a company of this kind which even with the advantages of a long hot summer could not manage to earn more than a beggarly 2½ per cent. on its ordinary shares. According to their own statement the directors found the past summer a fairly favourable one, but owing to great and growing competition the gross profits only rose by £475 to £17,[illegible], and to earn this £554 more at £13,451 had to be spent. With the help of a rather larger balance of £1,037 brought in the net amount available was no more than £5 up at £5,576, so last year's dividends are repeated of 5 per cent. on the preference and 2½ per cent. on the ordinary shares, which it is carefully explained is equal to 7½ per cent. on the original shares, and £1,[illegible] is carried forward. No information is permitted to transpire regarding the sums written off for depreciation, but freehold and leasehold property, proprietary rights, trade marks and goodwill, all jumbled together, are valued at £97,224 or £508 less than a year ago, and horses, vans, &c., are £312 down at £1,943, while plant is practically unaltered at £12,118, so that the wastage allowance cannot have been on a very lavish scale. Stock of syphons, bottles, soda fountains, &c., at selling prices has been reduced by £4,425 to £33,486, but the decrease seems to be entirely due to a transfer from this account to the one for syphons, giant syphons, tablets, &c., on loan which is £[illegible] up at £46,775. The reserve against these two items has been increased at the same time by £[illegible] to £31,171. Liabilities to sundry creditors are £259 lower at £2,421 while sundry debtors have risen by £2,883 to £17,786, but cash shows a shortage of £763 at £6,501 and investments are slightly smaller at £2,[illegible].

A. AND R. THWAITES AND CO., LIMITED.

The profits of this mineral water business for the year ended September 30 were £6,319 or only a slight decline against the previous twelve months, notwithstanding that revenue has provided a large sum spent on further developments. The credit from the previous account was £1,321, bringing the disposable revenue to £7,640, and after providing debenture interest, depreciation, income-tax, and interim dividend £4,907 was left. The balance of preference dividend takes £652, and the directors now propose a final dividend at 13 per cent. per annum on the ordinary shares, together with a bonus of 1s. or 1 per cent., making the total return for the year 11 per cent., adding £500 to reserve, and carrying forward £1,157. Against the property valuation of £53,656 the total reserves are £17,000 besides the reserve for bad debts of £1,200 and generally the position is fairly good, although the cash balance is rather small at £614.

LEWIS AND BURROWS, LIMITED.

This business of retail chemists owns 24 shops, and as a shareholder pointed out at the meeting held on November 30, the nett profit of £2,311 for the year to September 30 represented roughly £100 per shop per annum. This proprietor thought that such a result indicated something wrong with the management, and other proprietors also expressed their opinion that there was a screw loose somewhere. Unfortunately, it appears that some of the shops do not pay, so that these businesses which happen to do well have the losses of the unproductive ones to meet. As the total income for the year was £4,505 and the nett balance £2,311, as stated, it follows that the outgo was £2,193, of which the directors' fees are quoted at £450 and the salaries of the general manager and secretary £570, while depreciation and £172 written off repairs and improvements accounted for almost £[illegible]. In their report the directors say that considerably increased expenditure has been incurred in advertising, in reconstructing the roof of the New Oxford Street branch, and in enlarging and improving existing premises, the whole of which, amounting to almost £[illegible] was charged to the profits of the year. With £[illegible] brought forward the disposable balance is £2,[illegible], and after meeting the 6 per cent. preference dividend the directors propose to pay the 10 per cent. on the ordinary shares. Depreciation reserve was increased by £800 and decreased by £882, leaving it at £[illegible] against the capital outlay under all heads of £[illegible]. No other reserve is possessed, and there is £[illegible] still to be written off on account of repairs and improvements. Sundry debtors are very small at £802, the business being almost entirely a cash one, and while £7,007 is due to sundry creditors the cash in hand appears at £21,531 and the cash is £6,501. The company has invested £1,668 in India 3½ per cent. stock, which was worth £1,381 when the balance-sheet was made up.

RIDGWAYS, LIMITED.

The reduction in the tea duty brought some benefit to this company as nett profits, including £[illegible] from transfer fees, rose by £2,230 to £22,300. Increases of £[illegible] to £[illegible] on the allowance for depreciation and £[illegible] to £1,[illegible] on interest charges were balanced by a reduction of £[illegible] to £[illegible] in advertising charges and with £[illegible] brought forward the available balance was £25,154. Preference dividend having been met, £[illegible]

representing the usual 10 per cent. of the nett profits, is put to reserve, and the ordinary shareholders receive an extra ½ per cent. at 8½, leaving £892 or £237 more to be carried forward. The policy of raising the dividend is not one to be commended, considering the company's position. Nothing has ever been written off the original properties taken over, which are valued at £330,000, and the further expenditure of £5,059 on other businesses, investments, &c., brings the total outlay on capital up to £485,905, after providing an unnamed sum for depreciation, &c., against which the reserve only amounts to £30,822, or about 6¼ per cent., not a brilliant figure to represent ten years' accumulations. Liabilities to depositors have increased by £7,074 to £32,405, and other debts owing are £7,621 up at £91,364, against which there is £94,628 or £4,136 more to come in, while stocks are £7,933 larger at £78,686, and cash has risen by £2,011 to £15,203.

Oriental Gas Co., Limited.

This is an Indian enterprise which in the twelve months ended June 30 received a gas rental of £69,183 and £17,108 from residual products, besides £10 from transfer fees, &c., making a total income of £86,301. To earn this revenue cost £57,204, leaving £29,097 as the nett profit. Dividends on investments produced a further amount of £1,957, and interest and discount gave £371, making, with £7,655 from previous account, a total of £39,080. An interim dividend of 3½ per cent. has been already paid, £5,000 added to the contingency fund, and £643 allowed for depreciation of investments. Income-tax further reduces the profit by £1,760, and after providing a final dividend of 4½ per cent., making 8 per cent. for the year, the credit carried forward is slightly increased to £7,730. The company's financial position is exceptionally sound as the contingency account will now amount to £16,000, and the directors have already accumulated reserve and depreciation accounts of £50,000 each. An exchange equalisation account stands for another £650, and a suspense account of £5,500 has been built up to meet the cost of a new gasholder. The capital stock is £300,000, there being no fixed debts, and although the capital expenditure is £341,876, the reserve funds prevent this excess outlay from straining the resources in any way. The company has, indeed, £66,000 separately invested, a very favourable trading account, and cash and bills to the extent of £15,227. It may be remarked that the gross income of the year was £4,391 in excess of the previous twelve months, of which £3,340 is attributable to gas rentals and the balance to residuals.

"Black and White" Publishing Co., Limited.

The profits earned by the company owning this well-known pictorial weekly permit of a dividend for the year ended July 31 of 6s. per share, being the first distribution since 1904, when 8s. was paid. After providing all ordinary expenses the balance of income was £5,402, from which directors' fees were £617 instead of £1,000, to which they are entitled, auditors' fee was 100 guineas, depreciation was allowed to the amount of £1,076, and debenture interest required £731, leaving £2,873 as the nett profit. It is raised to £3,002 by the sum of £129 brought in, and after payment of the dividend mentioned there is £607 to be carried forward. The 500 founders' shares of £10 each, of course, receive no dividend, and do not seem ever likely to since they cannot stand in until 15 per cent. has been paid on the £95,000 of ordinary capital. What are known as the formation expenses, including, we suppose, the copyright, have a balance-sheet value of £62,331, and the reserve fund is £829. The plant, machinery, &c., was increased by £49 and reduced by £1,113, leaving it at £18,971, and the stock-in-trade is valued at £3,639. Creditors are moderate enough at £3,883, and cash, investments, bills receivable, and debtors make up to a total of £23,803, so that the finances might be worse.

British Columbia Canning Co., Limited.

This company's annual accounts are made up to May 31 last, and show that the nett profit for the season 1905-6, after deducting debenture interest, providing for depreciation, and paying all expenses in London and British Columbia, was £10,979, while the sum brought in was £153, making £11,132. From this profit the directors put £5,000 to reserve, and after meeting the preference dividend a dividend of 2½ per cent. together with a bonus of equal amount are paid on the ordinary shares, leaving £2,663 to be carried forward. The stock of salmon, appearing in the balance-sheet at £8,098, has been nearly all sold at prices confirming this figure, but it seems that the salmon pack for the season 1906, the result of which will be shown in the balance-sheet next year, has proved disappointing. This is particularly the case from the Fraser River and trap fishing, and although the company have secured a full share of the fish their total catch will show a falling off as compared with the 1905 season. The sums written off properties and the provision made for depreciation was considerable at £6,000, but the capital outlay for the year was £3,397, and the land, buildings, plant, &c., now appear at £32,393. Against this there is the reserve of £17,000 and debenture redemption fund of £6,100, but whether the latter total includes the sum of £1,000 set aside on account of the past year is not very clear. Sundry creditors are £20,896 against book debts and bills payable of only £6,667, but £28,268 has been spent on account of the season of 1906 and the cash balance is £14,298.

London Woollen Co., Limited.

In explaining a rather unsatisfactory result for the year to November 13 the directors of this company complain of the continued depression of trade, but nearly all other companies speak of the greatly improved condition of business, particularly where it affects the textile industry. We imagine that the unfortunate strike in the summer against which the company had to contend was a more potent influence on the revenue. With transfer fees and interest the income is returned at £20,197, and after providing all expenditure and interest on debentures, only £2,364 is left, which is certainly very poor. The payment of the preference dividend swallows up practically all this profit, but an interim dividend at the rate of 5 per cent. per annum has already been paid on the ordinary shares. This means a distribution considerably in excess of the profits, but not content with that, the directors propose to pay a further ordinary dividend at the same rate, which will involve a transfer from reserve of no less than £1,815. Such a policy could perhaps be justified if the reserves were of a substantial kind, but including the lease redemption fund of £941, their total is only £10,854 against the goodwill account of £48,460. The debenture debt, too, is fairly heavy at £40,000 measured against the share capital of £80,000 and £23,015 is owing to sundry creditors against debtors of £31,295. Fortunately the reserve is invested outside the business, and is therefore easily tapped, besides which the company has a good supply of cash, £10,991, in addition to bills receivable of £930. Stock-in-trade is worth a further sum of £32,649, so that the position is fairly liquid. The lease of the premises is entered at £18,000, against which the redemption fund mentioned is held, and the fixtures and machinery, after deducting depreciation of 10 per cent., have a book worth of £958. It should be noted, perhaps, that the investments show a depreciation of £1,150 on their cost.

Cleveland Bridge and Engineering Co., Limited.

This small company did wonderfully well in the 12 months to September 30, earning a gross profit on manufacturing account of £31,017. The balance brought forward of £7,701 raises this to £38,718, and after deducting bank interest £480, depreciation £4,586, and a bad debt of £100, the nett credit remaining is £33,548. From this the preference dividend requires only £1,562, and the board pay no less than 22½ per cent. on the ordinary shares, absorbing a further amount of £17,586. The directors' fees next take £400, and after adding £4,000 to reserve the sum carried forward is increased by well over £2,000 to £9,999. The company's issued share capital is only £111,060, and there is no debenture debt except that £1,888 has been borrowed on the security of £50,000 first mortgage debentures. The freehold and leasehold land and buildings are valued at £29,402, and the railways, fixed plant, and machinery at £41,380. Loose tools, erection plant, &c., are entered at £17,003 and the stores and unfinished contracts represent a total of £30,731. Only £10,121 is due to sundry creditors against book debts of £51,156, but it is to be hoped that a good many of the latter shortly fall due as the cash balance is much too small at £209. With the addition now made from profits the reserve fund is increased to £20,000, all of which is in the business.

Weldless Steel Tube Co., Limited.

This small company does not issue a profit and loss account, but we learn from the report that the result of trading for the year ended September 30, after writing off £3,765 for depreciation and providing for repairs, maintenance, directors' salaries, fees, &c., is a profit of £4,878. Add £1,670 brought in, and there is £6,549 for disposal, from which debenture interest takes £1,282 and the preference dividend £2,090. The balance still remaining is £3,176, and although it would not be difficult to provide a moderate dividend on the £40,000 of ordinary capital the directors propose to carry forward the whole amount. No addition is made to the reserve fund, which will remain at £8,000, and on the assets side the goodwill, trade marks, and patents are valued at £21,366, while the plant, machinery, and loose tools stand at £57,144. The capital expenditure for the year was £7,462, against which £10,795 appears for depreciation and repairs. The stock-in-trade and works in progress are certified by the managing director at £24,085, but sundry creditors are almost £10,000 in advance of debtors, and cash and bills are no more than £1,041, so that the directors are no doubt wise not to further strain the company's resources by paying a dividend on the ordinary shares. They simply have not the money in hand to do so, and borrowing at bankers might be difficult.

Palmer Tyre, Limited.

Apparently the productions of this offshoot of the India Rubber, Gutta Percha and Telegraph Works Company are not so popular as those of some of its competitors as the statement of profits for the year ended September 30 shows a further drop of £1,405 to £4,848. The directors consequently have to cut down the dividend to 5 per cent. compared with 6 per cent. a year ago and 10 per cent. for the previous twelve months and can only add £1,500 or £500 less to reserve by reducing the balance forward from £1,365 to £962 less directors' fees which for 1904-5 seem to have been £750.

COMPANY MEETINGS.

PENINSULAR AND ORIENTAL STEAM NAVIGATION.

The ordinary general meeting of the Peninsular and Oriental Steam Navigation Company, was held on Tuesday, December 11, Sir Thomas Sutherland, G.C.M.G., LL.D., chairman of the company, presiding.

The Secretary (Mr. George Frederick Johnson) having read the notice convening the meeting,

The Chairman said: Ladies and Gentlemen,—I now rise to move the adoption of the report, which I have no doubt, as usual, you will take as read. Before I enter upon the more purely business topics of our report, I should like to say on behalf of my colleagues, and for myself, how deeply we deplore the loss of our old colleague, Lord Leven, who went over to the majority a very short time ago. Lord Leven was elected a director of this company some 37 or 38 years ago, and he was the senior member of our board. Of late years, owing to his many public engagements, he was unable to give that close attention to our affairs which he had at one time given, but he was at all times ready with his counsel and his aid to assist his colleagues, and his affection for the company was of a very deep-seated and real kind, for he had known this company from his boyhood. We, who were so closely associated with Lord Leven, and who were so intimate with him, could appreciate to the fullest extent his high character and many excellent qualities, and I may say for myself, and I am sure also for the gentlemen who are sitting beside me, that as the years rolled onward our friendship with our late colleague grew and increased. We present you to-day my friend Mr. Ernest Haliburton Cunard as a candidate for the vacant seat at our board. I need hardly tell you that Mr. Cunard bears a name honoured among the pioneers of steam navigation; he is happily possessed of large experience in connection with affairs somewhat similar to our own, and will, I have no doubt, be an admirable representative of the shareholders when you elect him to-day. Referring to the report itself, and to the financial history of the year, I suppose I should hardly be wrong in saying that by far the most interesting point in the report is the dividend which we pay. The amount of the dividend and the bonus is, as you are aware, identical with the dividend and bonus we have paid during several years past, and we pay this dividend after putting aside for the purpose of a sinking fund the considerable sum of £461,097, but I should like to remind you again, as I am sure I have done on former occasions, that the prosperity of the company is due in a great measure to the safe navigation of your fleet, a fleet of which you are the sole underwriters, and which cost originally upwards of 8¼ millions sterling, and which I suppose could hardly be replaced for that amount in the present day. As you are aware, the value of the fleet in our accounts has been handsomely written down, and now stands at the by no means great figure of £3,612,231. During the past year we sold something like 25,000 tons of our old vessels, which stood at a nominal cost in our books, and during the present year we have acquired 57,000 tons at a cost of £1,163,623. I need hardly say that the dual operation necessarily adds considerably to the book cost of your fleet, but notwithstanding that, if we allow for the cash reserves which you are aware that we possess, you will find that the value in our books of your important fleet works out at a figure somewhat under £6 per ton. (Applause.) That shows you that in that respect your capital account now stands in a most sound position, and as regards your profit, which is equal to 9 per cent. over the whole range of your stock, if the profit is not equal to that of a prosperous brewery or of a great banker, it is at all events on a par with the profit earned in enterprises similar to our own. I turn now to look at the figures of our traffic as shown in the report. They may, when we come to analyse them, be considered both favourable and unfavourable. Our freight revenue last year amounted to £1,521,309, which shows a deficiency of something like £67,000 on the revenue of the previous year, but if, on the other hand, we allow for a difference in the nature and extent of our business with the Government, in regard to our transport service and other transactions of a similar kind, we shall find that the net deficiency as compared with last year, amounts only to £37,000. I need hardly say that our earnings would have been much greater, and should have been much greater undoubtedly, but for certain adverse circumstances which have affected our business, and also affected the business of other companies engaged in the Eastern trade. Prominent amongst these adverse circumstances, I need scarcely say is the war in rates to India, which has prevailed during the last 18 months, and which I am sorry to say continues up to the present time. I explained at our last meeting the genesis of this unfortunate dispute, and I have merely to repeat that it arose entirely because our German opponents resisted our right to load at Antwerp, which was in no sense a German port, to Calcutta and to Bombay, which are in every sense British ports, and they hoped I presume, by rushing into a desperate conflict, to assure to themselves a permanent monopoly of that trade. Well, gentlemen, I have no desire, and no intention, of criticising our opponents' tactics, but I could have understood them better if, instead of attempting to load our ships in Antwerp, we had attempted to load them at Hamburg or at Bremen. Hostilities would in that case have been perfectly natural. While I do not criticise our opponents, I have no intention whatever of claiming any monopoly of virtue for ourselves. There is no doubt that the P. and O. Company may be said to live in a glass house, their affairs are known to all the world, and every movement of theirs is closely scanned by their competitors, and by the trade in which they are engaged in general; and I can safely say that it has never been charged against us in our relations with our competitors, that we have ever pursued a grasping or an unreasonable policy. (Hear, hear.) On the contrary, we have lived, and live at the present moment, on amicable terms with all concerned except in regard to this unfortunate German dispute, but it is a dispute in which it was impossible for us to yield the principle for which we contend. For what is the crux of the matter so far as the company is concerned? We cannot load our ships from the Far East to the Port of London alone; the conditions of trade have changed so as to make that absolutely impossible. Our Liverpool and Glasgow competitors and friends are in a totally different position; they bring their ships to London, and they discharge them here, they discharge them again in Liverpool, and they discharge them in Glasgow, but we can only carry cargo to a port of the Continent where the Continental trade is greatly on the increase. That port is Antwerp, and last year we carried and discharged 70,000 tons of cargo, which was necessary in order to assist in filling our vessels; and we claim, and insist, that we must be free to load our ships where we discharge them, on reasonable terms and to a reasonable extent. I need scarcely say that many efforts have been made during the past 12 months to bring about a *modus vivendi* in this unfortunate quarrel, not only by us, but by the other British lines, which are interested, and which have suffered grievously with us in consequence of the confusion which has been caused, but I am glad to state that not one of those lines has shown for a moment any sentiment of weakness in regard to the rights of the question at issue. A few days ago I would have said that this matter was settled, and that an agreement had been positively arranged, but I regret to say that there is still some rift within the lute, although I trust it is not of a very serious character, and the war of rates still continues. I believe that negotiations are still pending, and that with patience and common-sense on both sides, which I trust will not be wanting, we shall be able very shortly to arrive at an equitable and an honourable peace—(hear, hear)—but although my hopes lie in that direction, I am bound to say that I do not believe that we shall see any immediate improvement in the outward trade to India for some little time. When a great trade such as this has lapsed, owing to circumstances, into a state of chaos, it requires always some time to bring it round to anything like a fixed equilibrium. The tonnage of the world is somewhat too plentiful, and ships seem to spring up on every hand to compete for trade wherever it is to be found. Then there is another curious factor in the case, and that is that the Indian Government and their associated railways do not give too much encouragement to lines such as ours, which run ships whether full or empty, but are always ready to patronise cheaper and slower vessels which are from time to time put on the berth against us, and this policy, of which I do not complain, and which I do not even criticise, has undoubtedly encouraged the German competition. Although no Government cargo has been loaded in German vessels, yet it has been extensively loaded in the ships which are worked in concert and alliance with our German opponents, and to that extent the German opposition has been indirectly encouraged. As I say, I make no complaint or criticism on the subject: I merely state the broad actual facts of the case in order to show you that certain difficulties have to be met in connection with an important branch of your trade. Now turn to another quarter of the world. I am glad to say that our China trade—the trade between London and China—has been, upon the whole, satisfactory, though not by any means so brilliant as it was in the previous year, for I find that we have had to do more work, and to run more voyages, in order to earn the same amount of money, but, on the whole, it has been satisfactory. If I turn to Australia again, I find that there appears to be an opening of a better state of things than has existed for some years, but here again, so far as the mail steamers are concerned, there is unfortunately a little fly in the ointment of the apothecary, because the mail steamers, depending as they do principally in regard to freight upon the conveyance of valuable refrigerated cargo, have seen the rates on refrigerated produce, especially butter, reduced by 50 per cent. in comparison with what they were before through the action of what is familiarly known as an American combine—which combine, so far as I know, has done no particular good to themselves by their policy—and the two British mail companies have in consequence lost in actual freight between £90,000 and £100,000 between them on butter alone. The state of things in regard to this trade is such that we felt it was necessary to make a movement of a forward character, and we have now inaugurated a service of cargo vessels by which we hope to supplement the earnings of our mail steamers. But at this moment, when, I may say, the interests of the mail lines are, to use a nautical phrase, somewhat in the doldrums, it certainly would appear to be an inopportune moment to inaugurate a new mail service of a novel and important character, such as has been advertised in the Press now for some months past. This scheme appears to be of a highly ambitious character. It is promoted apparently by a syndicate of eminent shipbuilders, who are doubtless ready and willing to build a fleet at a cost of something like four millions sterling, and are, I presume, ready to carry out the operation not altogether and exclusively from philanthropic motives. It will not be the first time in the history of the Australian colonies that an outsider has rushed into a mail contract which an experienced company like the P. and O. Company declined to entertain, and history tells us

that the result was followed by serious disaster. The project to which I am now referring will, if established, require a revenue, including what will be necessary for the purposes of depreciation and insurance, of, I should think, a million sterling, and speaking as a practical man who is engaged in connection with affairs of this kind, I say it is absolutely impossible to surmise where a revenue of this kind is to be obtained under the conditions specified in the Australian trade, unless the existing mail companies are to dissolve like the baseless fabric of a vision, or crumble like the Walls of Jericho, but we do not live in the age of miracles, and threatened enterprises have the knack of living for a long time. (Hear, hear.) It might perhaps be supposed in reference to this scheme, that there is great and unexplored wealth in the passenger traffic with the Australian colonies. I will tell you how that stands so far as this company is concerned. I believe it will not be denied that during the last twelve months the P. and O. Company owned the finest ships running in the Australian trade. These vessels had some 13,000 passenger berths available for first and second-class passengers during the year, and not more than one-third of that accommodation was filled by Australian passengers throughout the whole year, and we should indeed be in a very bad way if we had not had some aid from our India and China connection. It is perfectly true that we do not carry emigrants, but everybody knows that emigration to Australia is of a most restricted character at present, and so long as those great lone lands of Canada and America are waiting for increased population, and so long, moreover, as the political condition of the Australian colonies remains what it is, I believe emigration to Australia will not be of a great character. (Hear, hear.) I suppose I am justified in making these observations in reference to an enterprise which it is said is to compete with the P. and O. Company, but it may be said that I am prejudiced. I am certainly prejudiced against a speculation which would only bring confusion and loss to all concerned. (Hear, hear.) With reference to our passenger traffic generally, I am indeed glad to say, and to point out to you, that while the total received under that head amounted to £1,087,406, it shows an increase over the earnings of last year of £102,719. I am happy to say, too, that this augmentation in our traffic is spread more or less over all our lines, and is not confined to one particular trade more than another, but I think credit may be taken in some measure for the improvement in our business in this respect by the steady improvement of our fleet and service which the board are always working to attain; and I think also it is due in a very considerable measure, in fact, in a large measure, to the liberal principle on which we now deal with the system of return tickets, which is dealt with in a spirit of broad liberality which I believe is highly appreciated by the public at large. I have only one word to say with regard to our expenditure, which exceeds the expenditure of last year by £100,000 in round figures, and that is that this difference is owing to various causes. In the first place, because we are using larger and more costly vessels in carrying out our mail service; secondly, because we have had to place several of these vessels on stations in the Far East at a considerable cost—and in old times, I may say, in parenthesis, that that charge of placing ships on station was always and quite legitimately, debited to capital account, but it has ceased to be so dealt with for many years past. And again, perhaps, the acceleration of our mail service is answerable for the greater part of our increased expenditure. I know there are simple people sitting, we will say, for instance, in Government offices who easily imagine that an acceleration of 24 hours in the length and breadth of a mail service such as ours is quite an easy and an inexpensive affair. I have no doubt any man at his desk can show that that is an indisputable fact, but we burned 67,000 tons of coal more last year than we did the previous year. A great deal of that expenditure is due to the increased acceleration of our mail service, and the increased tonnage of our mail steamers. Not only have we spent largely in coal, but in Suez Canal dues and in other charges. In Suez Canal dues, for instance, the excess is—I forget the exact amount—but it is something considerable, notwithstanding the fact that the Suez Canal dues were reduced by 75 centimes per ton at the beginning of this year. Speaking of the mail service, the report reminds you that we recently sent in a tender for a new contract. Here, again, I believe it is sometimes supposed that a mail contract is a sort of *bonne bouche*, and that it ensures a certain profit under all circumstances. It is impossible to conceive a greater delusion. A mail contract, taken for a term of years, is a great speculation, for who can tell what the price of coal will be tomorrow or next day, or five or six years hence; who can tell what the other hundreds of conditions which apply to the working of a service of this kind will be a few years hence? But this question of the acceptance of our tender or its rejection is still on the knees of the gods, and is hovering about somewhere between Simla and St. Martin's-le-Grand, and I am precluded from giving you those particulars of our proposal, which I otherwise hoped to have been able to have done, but I will say in one word that the proposals which we have made to the Government are not only of a public spirited kind, but they are of an optimistic character, and I am not sure that, looking at what is happening now—and we know that prices of every description are mounting up, prices of material and of fuel and of everything necessary for our purposes—we have not made too optimistic a proposal in our desire to meet the requirements of the public. Well, gentlemen, in framing our tenders we have always acted under an acute sense of responsibility towards the public as well as to our shareholders, and I believe it is to this guiding principle in dealing with a great public question we owe the fact that the company has stood possessed of these important contracts for more than half a century. (Hear, hear.) You will probably expect me to say some words with regard to the new departure announced in the report in reference to officers and cadets. It has been our conviction, ever since this company existed, that the handy-man, the handy-sailor, the handy officer is better trained on board a sailing ship than on board a steam vessel, and we have acted on this policy, and are acting upon it at the present moment, but the facts are unfortunately against it as a policy for the future, for sailing ships are so rapidly disappearing that we cannot depend upon the old sources of supply to appoint our officers. Of course, we consider very frequently what would be the best thing to do under the circumstances. We might, I suppose, have started a training ship of our own. I believe the company many years ago had one or two vessels of that kind, which would have been an admirable school for the future officers of the company, though financially somewhat disastrous. I believe that the plan which we have hit upon is, upon the whole, likely to prove a judicious and liberal one without being too costly. I shall be greatly disappointed if it does not prove to be the means of training a race of officers and commanders of a character equal to those we have at present. (Hear, hear.) We shall be very strict in spending your money on the education of the young men in the manner in which we contemplate doing, and we shall be very strict in the selection of our candidates, for we have no intention of reverting to the days of Peter Simple and adopting the fools of the family into the mercantile marine. (Applause.) Now I think I have touched upon all the leading features in the report which are of any interest. It may not be considered, perhaps, that the year which has passed over our heads has been one of unalloyed prosperity, but certainly we have no reason to be discontented with the general results, and I can assure you that the report reveals the fact of much hard work on the part of our service, in which all our officers afloat and ashore have worked exceedingly well. (Hear, hear.) We do not adopt in this company any formal vote of thanks to our commanders, our officers, our agents, and all those who serve under our banner, but for that reason it is more necessary that I should place on record the board's sense of the zeal and devotion which is at all times exhibited in your service. I suppose there is no doubt that in these days of telegraphic communication the success of the company depends mainly on your headquarters' staff, and the staff will always be recruited from the fittest amongst those who have shown by their work abroad that they are the most fit for promotion. I should not like to close my remarks on that point without saying that we lose the valuable service of an old officer in this company, Mr. Kendall one of our general managers, a *persona gratissima* in the company—(hear, hear)—and I may say equally well known outside the company. (Hear, hear.) He has retired full of years—although, I am sorry to say, he is younger than I am—and full of honour. (Applause.) We have many men whom we would like to promote, and I most sincerely wish it were possible that promotion in our service might be much more rapid than it actually is, but on looking back 30 years, I cannot recall, and I am sure no one else can recall, half-a-dozen cases of men who have left our service voluntarily to seek their fortune elsewhere. I believe such a record speaks well for the service, and it also speaks volumes for the loyalty and attachment of those who have once eaten the bread and salt of the company. Now, gentlemen, having kept you for an undue length of time, I beg to propose: "That the report and statement of accounts now read, which have been circulated amongst the proprietors, be adopted." (Applause.)

Mr. Samuel Steuart Gladstone: I have much pleasure in seconding the proposition.

The resolution was carried unanimously.

The Chairman: I propose: "That a dividend for the half-year ending September 30 last of 2½ per cent. on the preference stock and a dividend of 6½ per cent. with a bonus of 3 per cent. on the deferred stock, as recommended in the report, be now declared, and that payment of the same be made, less income-tax, on and after December 18."

Major-General Sir Owen Tudor Burne, G.C.I.E., K.C.S.I., seconded the resolution, and it was carried unanimously.

The Chairman: I have great pleasure in proposing "That Ernest Haliburton Cunard be elected a director of this company."

Mr. William Adamson, C.M.G., seconded the resolution, and it was carried unanimously.

On the motion of Mr. George Grogan, seconded by Mr. S. B. Seaman, Mr. William Francis Courthope was re-elected an auditor, and on the motion of Mr. Arthur Peake, seconded by Mr. F. O. Stevens, Mr. Frederick Augustus White was also re-elected an auditor.

The Chairman: That concludes the business of the meeting.

Mr. W. J. Prim: I have great pleasure in proposing a vote of thanks to the chairman and directors, and the staff both afloat and ashore. I am sure after the number of years the company has been carried on so successfully, there is every prospect of a continuance of this prosperity. I think that everything has been done that could possibly have been done, with regard to the present difficulties, not only as to contracts, but as to our German opponents. (Hear, hear.)

Mr. Arthur Peake: I second the resolution.

The resolution was carried unanimously.

The Chairman: I thank you very much on behalf of my colleagues and myself for this renewal of your confidence in us as regards the management of your affairs. I really feel that we almost deserve it. (Applause.) We should like to be able to

guarantee a profit every year. I should particularly like to be able to tell you that there are no difficulties at all in the way, that we have a pleasant, happy monopoly, or something of that kind, and that you need never be under any anxiety as to getting 10 or 12 per cent. I am sorry to say, however, it is impossible to adopt that course. I have frankly told you some of the disadvantages under which we labour, but at the same time those disadvantages are of a nature that have hitherto been overcome, and I sincerely trust and hope that they will be even more successfully overcome in the future. I have made so many speeches here myself, that I was saying, before I entered the board room, that I wished that my speech could be taken as read, like the report, and if you were really to do me a kindness you would say that in future I should not be expected to make a speech, but simply to propose the resolutions and ask you to hold up your hands in favour of them. (Laughter and applause.)

The proceedings then terminated.

WILLIAMS DEACON'S BANK, LIMITED.

An extraordinary general meeting of Williams Deacon's Bank, Limited, was held, on the 10th inst., in the board room of the bank, Moseley-street, Manchester, to consider and, if thought fit, approve a resolution of consent to the increase of the capital of the company, in accordance with the resolution of the board passed on November 22, 1906, and set out below, declaring that the sum of £30, part of the nominal amount of the new shares, shall not be capable of being called up except in the event of, and for the purposes of the company being wound up.

The resolution to which reference is made was that subject to the consent of a general meeting, the capital of the company be increased to £7,812,500 by the issue of 31,250 new shares of £50 each, and that the sum of £30, part of the nominal amount of each such share, shall not be capable of being called up except in the event of, and for the purposes of, the company being wound up. That the said new shares be issued as shares ranking *pari passu* with the existing capital, provided that they shall not confer the right to participate in any dividend or bonus declared in respect of the year ending December 31, 1906.

Colonel Sir C. M. Royds, C.B., chairman of Williams Deacon's Bank, presided, and there was a large attendance of shareholders.

The Chairman, in moving the resolution, said: "We have invited you here to-day so that we may give you fuller information than was possible in a circular respecting the important step your directors have taken in acquiring the business of the Sheffield and Rotherham Joint Stock Banking Company, Limited, and also that we may submit for your approval a resolution authorising the creation of further capital to enable us to complete the purchase. In the circular calling the meeting, which you will all have received, we told you we had important business interests in certain districts of Yorkshire and Derbyshire. The steady growth of these interests, both in volume and in value, led us some time ago to feel that, to secure to the bank and to the friends of the bank, the full advantage of this connection, it was necessary the bank should be directly represented in the district of which Sheffield may be regarded as the industrial centre. We accordingly very carefully considered how such direct representation could best be attained. In these days of keen competition, when every town and village is already provided pretty fully with banking facilities, the getting together of a remunerative business by the establishment of new branches is a very slow and expensive process, and we naturally hesitated to adopt that course. The alternative was to look about for an opportunity of acquiring the business of a sound and well-established bank in the district we wished to cover, and we felt it was a matter for congratulation when circumstances brought us into friendly touch with the Sheffield and Rotherham Bank. We put our views before the board of that bank, and invited them to consider the question of amalgamation. I am glad to say that, after receiving their careful consideration, the suggestion commended itself to these gentlemen, and they agreed with us in believing that an amalgamation of the two banks would be to the advantage of the shareholders of both. Having happily reached this stage, it was necessary before proceeding further that each bank should be entirely satisfied as to the soundness of the other's business. We, of course, afforded our friends the amplest evidence of the soundness and strength of this institution, and, in turn, the executive of the Sheffield and Rotherham Bank were able to satisfy our general managers and their assistants after an exhaustive examination of the advances, investments, and affairs generally, that the business of the Sheffield and Rotherham Bank is on a sound and satisfactory basis.

This all-important point having been satisfactorily settled, we had to look for a fair basis of negotiation. This basis was readily found, owing to the fortunate coincidence that in the case of both banks the nominal value of the share is £50, the amount paid up on each is £8, and the rate of dividend 15 per cent. Under these circumstances the negotiations, so far as these related to the terms to the shareholders, presented, you will see, no greater difficulty than the exchange of one share of the Sheffield and Rotherham Bank for one share of this bank. It is confidently believed that this arrangement will be considered fair and satisfactory by the shareholders of both banks, and that few, if any, of the shareholders of the Sheffield and Rotherham Bank will be unwilling to accept the shares of this bank in exchange for their present holdings. In the amalgamation of two banks there are, of course, many points of varying importance which have to be considered, and with the goodwill of our friends we have had no difficulty in satisfactorily dealing with all of these. There is, for instance, as you will be glad to know, a strong local regard entertained for the Sheffield and Rotherham Bank by its shareholders and customers. We, of course, are very anxious that this good feeling shall be continued to the bank under its new conditions, and, with this view, we have arranged that its present directors shall act as a local advisory board, and that two of their number should also join the board of this bank. We have also secured the services of Mr. Brammall, the able and long-esteemed manager, and two leading officers of the bank, for a term of years under a mutually satisfactory arrangement; we also take over the whole of the general staff upon their present conditions of service. We shall also retain for some years, at any rate, the name of the Sheffield and Rotherham Bank in the title of each office in the district.

You will have observed in the copy of their balance-sheet which accompanied our circular that the Sheffield and Rotherham Bank, which was formed in the same year as this bank—1830—has a capital of £250,000 and a reserve fund of £246,000. Its deposit and other balances exceed £2,000,000. Its chief office is in Sheffield, where it has an important connection, and it has a large and valuable business at Rotherham and has ten branches and sub-branches in other places within easy reach of both Manchester and Sheffield. Several of these branches come very near to our own border. You will probably be inclined to think that Manchester is as closely associated as Sheffield is with such Derbyshire towns as Buxton and Bakewell. However that may be, it will be satisfactory to you to feel that, by the nearness to Manchester of these and several of the other offices, the business of the Sheffield and Rotherham Bank is a convenient and easily directed extension of our present system. You will have noticed that the resolution, which I shall presently submit to you, provides for the increase of the paid-up capital of the bank by only £250,000, and the reason for this is that it is proposed to provide the remaining £6,000 of capital of the Sheffield and Rotherham Bank in another way. The reserve fund of the Sheffield and Rotherham Bank stands, as I have said, at £246,000. From this we propose to transfer to our own reserve fund such an amount as will at least maintain the ratio of 65 per cent. which our present reserve fund bears to our present capital. Part of the fund will also be utilised to provide for the £6,000 capital, to which I have just referred, and the balance will be added to the rest reserve of the bank. We take over the business as from June 30 last, and the actual transfer will be made as soon as the legal formalities have been completed. This, however, cannot be done by the end of the year, and it has therefore been arranged that the dividend on the shares of the Sheffield and Rotherham Bank for the current half-year will be paid to its shareholders by the liquidators of that bank. The new shares of this bank, to be exchanged for shares of the Sheffield and Rotherham Bank, will, of course, carry dividend as from January 1, 1907. I trust I have been able to satisfy you that the step we have taken is in the best interests of the bank, and I shall now be glad to answer any questions before putting the resolution to the meeting. I am pleased to inform you that the shareholders of the Sheffield and Rotherham Bank have this day passed resolutions for amalgamation.

Mr. G. H. Caddum seconded the resolution, which was carried unanimously.

SHEFFIELD AND ROTHERHAM JOINT STOCK BANKING COMPANY, LIMITED.

An extraordinary general meeting of shareholders in the Sheffield and Rotherham Bank was held in Sheffield, on the 10th inst., to consider the desirability of amalgamating with the Williams Deacon's Bank, Limited, of London and Manchester. Mr. B. C. Wood presided, and there was a crowded attendance of the shareholders. The Chairman dwelt upon the advantages that would accrue to the shareholders on the Sheffield and Rotherham Company by joining a bank of such high standing, respectability, and strong financial position as that of Williams Deacon's. They had, he said, made the most careful investigation into the affairs of that bank, and were entirely satisfied that it would be to their interests to join them. They would then be able to accept safe business, which from time to time they had in the past reluctantly been debarred to refuse owing to their lack of capital. Another very important point was that they would have the Manchester Bank as partners instead of competitors, for the latter had determined to enter into this district if the amalgamation scheme fell through, as they had already large interests in the locality. A resolution in favour of amalgamation was moved by Mr. Wood, and seconded by Mr. W. A. Milner. Mr. J. H. Brammall, manager of the Sheffield Bank, gave further information of the position of both organisations with a view of showing how much it would be to their advantage to amalgamate.

The resolution was carried with one dissentient.

MANILA RAILWAY COMPANY.

The nineteenth annual general meeting of the Manila Railway Company, Limited, was held, on Friday, December 7, at Winchester House, Old Broad Street, E.C., Mr C. J. Cater Scott, chairman of the company, presiding.

The Secretary (Mr. J. Mackenzie) read the notice convening the meeting and the report of the auditors.

The Chairman apologised for the delay which had occurred in holding the meeting, but stated that if the directors had called

the shareholders together at the ordinary period, the position would have been extremely awkward. He would either have had to say that he could not tell them anything at all about the proposed settlement with the United States Government and the plan of reconstruction, or to tell them a half-story. Now, however, everything could be quite frankly disclosed. By the plan of reconstruction proposed all the interests in the company would be placed on a sound and permanent footing. As regarded the working of the railway the company did not do badly in 1905. The number of passengers carried, 1,449,000, was only exceeded in 1903, after which there was some readjustment in the tariff rates in order to meet the altered conditions of exchange. As a result of that they had had some loss of passengers, but he thought he was right in saying that they earned more money. Of goods they conveyed 233,502 tons in 1905, being by far the largest quantity they had ever dealt with. The gross earnings for the year were $1,694,820, and the expenditure was $723,040. The maintenance of this very low ratio of working expenses to receipts was, he thought, most creditable to Mr. Higgins, their general manager. The line, too, had been well maintained. The results of the working of the Cabanatuan and the Antipolo extensions had been most satisfactory for new and undeveloped lines, confirming Mr. Higgins's estimates. From these results, in fact, he thought they might look with confidence to the new and larger extensions which the American Company were going to construct under the proposed arrangements, and he believed that the new extensions would add very considerable value to the securities which he hoped they would agree to accept in the American company. After commenting on the net result of the past year's working, and mentioning that there was little hope of improvement under the old Spanish concession and the existing condition of things, he strongly urged them to accept the settlement now offered. In conclusion he moved "that the report of the directors and statement of accounts for the year ended December 31, 1905, be and the same are hereby approved."

Admiral Sir Cyprian A. G. Bridge, G.C.B., seconded the motion, which was at once carried unanimously without discussion; and the retiring director, Sir Cyprian Bridge, and the auditors, Messrs Deloitte, Plender, Griffiths, and Co., were subsequentiy re-elected.

An extraordinary general meeting of the shareholders followed, to consider and, if thought fit, pass a resolution approving and adopting the proposed plan of reconstruction and authorising and directing the board "on behalf of the company to execute and do all agreements, instruments, and things requisite or desirable for carrying the said plan of reconstruction into effect, including the execution in favour of the Government of the United States of America, the Government of the Philippine Islands, and the Provinces and Municipalities thereof, of the stipulated waiver of claims and release necessary to give full effect to the new concession referred to in the said plan of reconstruction, and for distributing amongst the secured creditors and shareholders of the company, in accordance with the table of distribution therein set forth, the debenture bonds, preference and ordinary shares, and cash to be provided thereunder in that behalf by the Manila Railway Company (1906), Limited."

The Chairman, in proposing the resolution, referred to the outstanding questions between the company and the United States and to the great importance of arriving at an arrangement. He afterwards referred in detail to the settlement which had been arrived at, and pointed out the advantages which all interested in the undertaking might expect to derive from the arrangement. Under the existing conditions the amount required to meet the fixed charges fell short last year of £12,295, whereas under the new plan and conditions there would be a surplus over the fixed charges of £22,800. The position of the shareholders would be greatly improved by the proposal.

Admiral Sir Cyprian Bridge seconded the motion.

The resolution was, after some discussion, put to the meeting and carried unanimously; and a further resolution was afterwards passed making certain alterations in the articles of association, as set out in the notice calling the meeting.

The Chairman afterwards stated that the directors were most anxious to get through all the arrangements, if possible, before the end of this year, so that the new company might start on January 1 next on what he hoped would be a career of prosperity.

A meeting of the holders of the 6 per cent. debentures was held subsequently for the purpose of considering and, if thought fit, passing extraordinary resolutions to the following effect.—

1. That the plan of reconstruction submitted to the meeting, and initialled by the chairman for identification, be the same, is hereby approved and adopted

2. That in order to enable the said plan to be carried into effect, the 6 per cent. debenture-holders of the Manila Railway Company, Limited, agree to surrender to the company as when called upon their debentures and unpaid coupons, and will accept in exchange for, and satisfaction of, each debenture for £100 and the unpaid coupons appertaining thereto:—

First. £100 4 per cent. "B" debenture bonds of the Manila Railway Company (1906), Limited.

Secondly. £100 in 5 per cent. preference shares of £10 each in the last-named company.

Thirdly. £6 in cash.

3. That the company be and they are hereby authorised to execute or direct their proper officers to execute and present to the Secretary of War of the United States of America, as provided in the concession referred to in the said plan, a release and waiver of all claims against the United States, the Government of the Philippine Islands and the provinces and municipalities thereof, based on the terms of the concession granted to the company by the Spanish Government, and also all claims growing out of the use and actual occupancy of the lines of the company by the military authorities of the United States, and out of the damage to the said lines, accessories, and equipment, resulting during such use and actual occupancy, and especially all claim against the United States for $1,515,000 gold presented by the British Ambassador to the Department of State of the United States on behalf of the company, and that such release and waiver shall bind all the holders of the 6 per cent. debentures of the company.

A resolution having been passed requesting Mr. Scott to preside over the meeting,

The Chairman, after a lengthy explanatory speech, proposed the adoption of the resolutions.

Mr J. C. Le Marchant seconded. After some discussion the Chairman declared them carried "by the necessary majority."

DELAGOA BAY DEVELOPMENT CORPORATION.

The fourth ordinary general meeting of shareholders in the Delagoa Bay Development Corporation, Limited, was held at the Cannon Street Hotel, E.C., on Wednesday, Mr. H. K. Heyland (chairman of the company) presiding.

The Secretary (Mr. W. L. Castleden) having read the notice convening the meeting, and the auditors' report,

The Chairman moved the adoption of the report and accounts, and remarked that for the first time in the history of the company the accounts showed a profit instead of a loss in working the combined undertakings in Lourenco Marques. But after deducting debenture interest and home charges the nett loss was £5,857 14s. 11d. Taking the amount written off on account of the East African dredging venture, there was a total of £9,283 to be carried to the debit of profit and loss. After dealing with other matters he went on to say:—The report tells you that the new water supply from the river Umbeluzi was completed and handed over to the general manager on August 1st last. The consulting engineers, Messrs. Beesley, Son, and Nichols, have reported that the work has been carried out to their entire satisfaction. After allowing for the higher rate of exchange, which ruled during the construction of the works, the original estimate has been only slightly exceeded, and this is, of course, very satisfactory to the board and to the consulting and constructional engineers. I should like to say a few words in testimony to the zeal of the resident engineer, Mr. Gibbs. There have been many difficulties to overcome in the construction of the works, mainly due to malarial fever, which at times has been prevalent at the pumping station and along the line of main, which is about 18 miles in length. I need only say that he has conducted the work in a manner highly satisfactory to us. The corporation is now in a position to supply from three to four times the present demand. We have thus the satisfaction of knowing that, humanly speaking, everything has been done to put the company on a firm footing for the future—that is, so far as the water supply to the city and port of Laurenco Marques is concerned—and we need not have any anxiety as to the abundance of the supply for many years to come. It will, however, be necessary in the near future to increase the storage in the city, and the manager has already received instructions to prepare the necessary plans and estimates for an additional storage reservoir. The funds in hand will be sufficient to carry out a portion of this work, but for completion some further sum will probably be required. The sum of £5,017 1s. 4d. has been expended in improving the distribution service in the city, and if the demand increases considerably some further extensions of mains in the city may be necessary. There is no revenue at present from the Rapoza and Ressano Garcia lands. I hope that in the near future the former, in an excellent position in the city, will be made use of for the erection of dwelling houses. This matter is having the consideration of the board. We have told you in the report that Mr. Satchell had resigned his position as general manager. This enabled the board to combine the two positions of general manager and resident engineer, thus effecting a very considerable economy in the general administration expenses. I now come to a very important matter, to which we have briefly referred in the printed report, and that is the petition which we presented to the Portuguese authorities, with a view of obtaining alleviation of certain onerous conditions in the water contract. Some months back your directors, after careful investigation, found that the charges made for water supplied for Government and municipal purposes were too low, and much below those levied in some larger towns in South Africa, such as Johannesburg, Pretoria, and others. The directors, therefore, resolved to present a petition, mainly for an increase in those prices, not in virtue of any of the conditions of the contract, but simply and solely on equitable grounds. Those negotiations, initiated last March, are not yet completed, and I am, therefore, unable to give you any information on the matter. I can, however, assure you that the petition has been received by the authorities with the greatest sympathy, and with every possible consideration, and they are fully prepared to recognise, by any means within their power, the great services rendered by the corporation to the city and port of Lourenco Marques. Knowing, as I do, and I may say somewhat intimately, the character of the Portuguese nation, I am satisfied, as far as I humanly can be, that they will grant us some measure of relief, and thus assist us in placing the corporation in a more satisfactory financial position. I am sorry to inform you that your directors have been unable to move any further in the matter of a house drainage system in the city of Lourenco Marques. All I can say is, that the corporation is ready now, as it always has been, to co-operate with the Portuguese authorities, and do everything in their power to place the city on a satisfactory sanitary footing. It goes without saying that any improvement of this kind must be, of course, to our advantage. You will expect me to say something with regard to the prospects of the current year. Well, I

can say very little indeed. We have been, and are really at the present time, more or less in a transition state, but I can say that under the conditions of the new water supply we have every reason to anticipate that our expectations of improved revenue will be realised, but not until we have had one entire year of working with the new water supply is it possible to foresee with any accuracy what our normal returns are likely to be. The latest reports as to the current year's working are encouraging, and the directors, therefore, trust that with anything like a normal increase in trade still further progress will be shown in the dividend earning elements of the corporation's undertakings. We have called your attention in the report to certain items of expenditure which, with the debit of the profit and loss account, we hope to submit proposals for dealing with some time next year. I now beg to move:—"That the report and accounts be received and adopted."

Mr. W. Bryson Butler seconded the motion, which was put and carried after some discussion.

In reply to a question for information with regard to the retirement of Mr. Henderson from the board,

The Chairman said that if it were the wish of the shareholders a meeting would be called within six months.

The retiring directors, Dr. B. F. Cabral and Mr. Frank Gotto, were re-elected, the auditors (Messrs. C. F. Kemp, Sons and Co.) reappointed, and the proceedings terminated with a vote of thanks to the chairman and directors.

CAPE COPPER COMPANY.

The nineteenth ordinary general meeting of the Cape Copper Company, Limited, was held, on Wednesday, at the Cannon Street Hotel, E.C., Mr. John E. Champney presiding.

The Secretary (Mr. P. J. Franks) read the notice convening the meeting and the auditors' report.

The Chairman, in moving the adoption of the report and accounts, congratulated the shareholders on the results of a very successful year's work, in which the company had earned the very considerable profit of £343,384, being £79,822 in excess of the profits in the previous year. It was, in fact, a little more than £12,000 in excess of the previous highest profit, made in the year 1899. (Applause.) This profit was earned, too, notwithstanding the heavy fall of ground which took place in the old part of the mine in the month of December of last year, which caused considerable interruption to the working and some increased costs. It would be observed from the recent mining reports that the company was now resuming its normal rate of output. He went on to say:—The increased receipts amount to £84,190, of which £74,818 is owing to the increased price received for our copper ores and metal, both from Cape and Tilt Cove, and £5,196 extra for interest. Receipts from compensation suspense account and other small items, less the small decrease on the profit earned on the railway, make up the balance. Adverting to two or three items in the balance-sheet, I would point out that the sundry creditors show an increase of £22,495, caused by the higher prices of purchased ores. The cash balances and amount on deposit show a total of £335,443, being an increase of £165,012 compared with the previous year. The value of the stocks of copper ores and metal is £102,143, a decrease of £6,183 in the present year. I must tell you, however, that the quantity of copper in stock has decreased by some 900 tons, the higher prices at which ores have been purchased accounting for the small difference in value. Our debtors have decreased by £23,905, being now £52,925 as against £76,830 in 1904-5. The returns for the year under review from the Ookiep mine were 15,031 tons, being a decrease of 4,215 tons of ore, representing 705 tons of fine copper, mainly due, as I have already explained, to the fall of ground. The returns from the Nababeep mine, owing to the lower assay of the ore extracted, also show a small decrease of 172 tons of fine copper, being 2,697 tons in 1904-5 and 2,525 tons in 1905-6. I have several times in past years called attention to the conservative nature of the estimates of our reserves, and this past year gives a rather striking illustration of this, for, although we have obtained from Ookiep 15,031 nett tons of ore, the estimates of reserves are identical at the end of the year with the beginning. The Nababeep reserves have increased by 10,000 tons—whereas the output during the year has been 53,151 tons—and now amount to 160,000 tons. (Applause.) It will be observed in the statement of accounts that the amount of £57,554 has been earned at Tilt Cove, of which our moiety was £28,777, being a substantial addition to our receipts. The success which has attended our operations in Newfoundland has emboldened us to use increased energy in searching for other mines, so that when Ookiep fails us—and may the time be far distant—we shall have other strings to our bow. (Applause.) With this object in view, we sent some time ago to America an agent in whose judgment we had confidence, to examine and report upon any likely mines which might be brought to his notice. We are at present doing some exploratory work in three places, and should the results justify it we shall take further expert advice. The preliminary work upon these properties is not sufficiently developed for me to speak with any certainty about them, but they appear to promise favourably. We have also been in negotiation about a mine in India, brought to our notice by Messrs. John Taylor and Sons. Here I expect we shall do some work before coming to a decision as to its merits.

Mr. Edmund A. Pontifex seconded the resolution, which was carried unanimously.

A resolution was then passed approving of an alteration in the articles of association fixing the remuneration of the directors.

CHAMPION REEF GOLD MINING COMPANY OF INDIA.

The eighteenth ordinary general meeting of the Champion Reef Gold Mining Company of India, Limited, was held on Wednesday at the Cannon Street Hotel, E.C., Mr John Taylor, M.Inst.C.E., the chairman of the company, presiding.

In moving the adoption of the report and accounts, the chairman feelingly alluded to the death of the late chairman, Sir Charles Tennant. During the past year, he went on to say, the production of bar gold was 177,641 ozs., which sold for £678,706. After deducting royalty and adding the amounts received from interest, rents, &c., the total income for the year was £653,565. The working expenses were £305,956, so that the balance of income over expenditure was £347,609. With the balance brought forward and £567 dividend on their shares in the Kolar Mines Power Station, Limited, they had a total of £349,844, out of which two interim dividends of 9d. per share each had been paid, absorbing £156,000, and appropriations amounting together to £112,113 had been made, leaving a balance of profit of £81,731. They now proposed the distribution of a third dividend of 9d. per share, leaving £1,731 to be carried forward. The shareholders would thus have received 2s. 3d. per share in dividends, representing 90 per cent upon the share of 2s. 6d. The further decrease in the cost of milling and cyaniding treatment was very satisfactory. The saving was largely owing to the concentration of the reduction plants, and it would have been still greater if they had not been obliged to run some of the machinery under steam for a few weeks. The mining costs this year of £195,400 showed a decrease of £5,071 as compared with the figures of last year. This must also be regarded as very satisfactory in view of the much greater extent of ground developed in the mine during the period. The temporary stoppage of a portion of the Cauvery electrical power, owing to the exceptional drought in the past season, did not cause any material interference with the company's operations, although inconvenience and some expense were occasioned by the necessity of having to resort to steam power. The adoption of electrical power had been of immense benefit to the mines, and their company would participate in the further power which would become available as soon as the additional installation which was now in hand was completed. The shareholders had no doubt read with interest and, he trusted, with approval the paragraphs in the directors' report with reference to the company's acquisition of an option over certain mining property in the district of Dharwar, in the Bombay Presidency, to which so much attention was now being given. The terms upon which they could secure the option appeared to be very reasonable in view of the results already obtained by the companies who were exploiting the district. The amount of work done in the mine was highly satisfactory, although unfortunately the ore developed had fallen in average value considerably below that in past years. Although good values had been shown at certain points, yet, on the whole, no change of a permanently favourable character had so far occurred. Their superintendent estimated the reserves at the very satisfactory figure of 383,000 tons, showing an actual increase on the previous estimate of more than 4,000 tons, notwithstanding all that had been taken away. Until the average width and grade of ore improved, he was afraid that they could not look for an increase in the returns of gold.

Mr. Edgar Taylor seconded the motion, and said it would be evident to the shareholders that valuable discoveries of ore were made in the mine during the year under review, but that the most advanced workings now in progress were not disclosing a reef either so wide, or so good a grade on the average, as they had in the past history of the mine been accustomed to. The grade, or gold contents, was the one essential factor which the devices of man could not control, and it had been the endeavour of the executive to minimise the effects of what was believed to be a temporary impoverishment of the lode, by more rapid development, and in this way the directors thought that they might claim to have been successful, as shown by the maintenance of the reserves.

After some discussion the resolution of the chairman was put to the meeting and carried unanimously.

DAGGAFONTEIN GOLD MINING COMPANY.

The fifth ordinary general meeting of the Daggafontein Gold Mining Company, Limited, was held on Wednesday at 3, Gracechurch Street, E.C., Mr. J. C. A. Henderson (chairman of the company) presiding.

The Secretary (Mr. W. L. Castleden) having read the notice convening the meeting and the auditor's report,

The Chairman said: Gentlemen,—There is very little to say regarding the accounts, but you will be glad to note that we have succeeded in getting the income and expenditure nearer one another, the loss for the last financial year being £[illegible], against £1,000 odd for the previous year. The profits received in Johannesburg amount to £80 for the last financial year, as against only £30 in 1905. With these exceptions I do not think there is anything in the accounts which calls for any special comment. With regard to the development of the property, which after all is the thing which concerns you most, you will have seen from the consulting engineer's report that during the financial year the total footage drilled in boreholes Nos. 5 and 6 was 3,862 ft. The results may be considered eminently satisfactory. The reef in No. 5 borehole gave 31 dwts. 6 grs., and in No. 6 the value was 11 dwts. 9 grs. The reef was proved in the former hole at 1,946 ft. and in the latter at 3,606 ft. In No. 5 bore-

hole the Kimberley reef was cut, the assay of which over 2.5 ins. ran 1 oz. 11 dwts. 6 grs. The present depth indicates variation in the formation betwen this borehole and No. 6. You will also have seen in the engineer's report that a record has been created in Rand boring experience in boring to this depth with a crown giving a 2-in. core. You will observe that the engineer's theory has been established by the cutting of the reef in No. 6 borehole, the reef averaging 11.35 dwts over 23¾ ins, the richest section being at the bottom portion, which assayed 1 oz 8 dwts over 6 ins. As you will have seen from the directors' report, in order to assist in the location of the shaft, it has been decided to utilise the time before operations can commence in sinking another borehole, which will be No. 7. Many factors have to be taken into consideration in determining the location of the shaft, such as water, access to railway, nature of ground, &c., as well as the question of the reef. It is most important that we be quite sure of our position in order that we may avoid the risk of putting down a shaft in a wrong spot. If the borehole strikes the reef satisfactorily, additional knowledge will have been gained by putting it down. This course has been deemed advisable in view of the local disturbed nature of the ground to ensure security, and is worth the expense. We have in view a site which from the contour of the ground justified its selection for either borehole or shaft sinking, as it is within reasonable distance of water, and has a sufficient slope to satisy all requirements for a lumping purpose, and there would be ample room for the hoisting gear and all the surface works; this position would be included wherever the mynpacht is ultimately chosen. The question of the choice of mynpacht is a matter of some importance and is much affected by a decision of the new Gold Law and how it is to be administered. Taking everything into consideration, our engineer is of opinion we shall do well to choose the site of No. 7 borehole at a spot a quarter of a mile north of the Daggafontein Brewery grounds. I do not think there is any necessity for me to go into these technical matters. Plans for the laying out of the mine are now under consideration, and this will take some time, as naturally the whole future of the company depends upon the wisdom with which we commence actual operations. The Chairman concluded by moving the adoption of the report and accounts.

Mr. W. Bryson Butler: I beg to second the motion. After Mr. Henderson's very lucid statement about our future plans, it is not necessary for me to add anything.

The motion was then put and carried unanimously.

The retiring directors and auditors were then re-elected unanimously.

HENDERSON'S TRANSVAAL ESTATES, LIMITED.

The ordinary general meeting of this company was held yesterday under the presidency of Lord Oranmore and Browne.

In moving the adoption of the report, the Chairman explained that he had recently been approached by a group of large shareholders in the company to know whether he would accept a nomination to the board, as it was desired to have upon it someone who might hold a neutral position in connection with the unfortunate disagreement which had occurred between its members. He had accepted the invitation, and had been elected to fill the post of chairman at this meeting, in order that he might, to the best of his ability, hold the balance between the contending parties on this particular issue. With regard to the accounts, the issued capital remained the same as it was last year, with the exception of the 718 shares issued in exchange for the 718 Henderson's Consolidated Corporation shares. The number of shares which they held in that corporation was now exactly equivalent to the number of shares which had been issued as the purchase consideration. By the terms of the agreement for the purchase of these shares the proportion was five of this company's shares for eight of the Henderson Consolidated Corporation shares.

After going in detail through the remaining items of the balance-sheet, he observed that the income earned during the year amounted to £47,700, and deducting the outgoings there remained the sum of £34,720 at the credit of profit and loss account, compared with £15,898 for the previous year, bringing up the credit balance to £122,124. Under the circumstances some shareholders might ask why they did not recommend a dividend. There were two answers to that question, first, that in the present transition state of the Government of the Transvaal, and the uncertainty as to the effect which the new Constitution would have upon conditions there, especially in the immediate future; and, secondly, that the depletion of the cash resources by the amount necessary to pay a dividend would be a financial mistake.

Mr. W. Bryson Butler, the managing director, in seconding the adoption of the report, replied to some questions which had been put to him by shareholders by letter. There had been, he said, a loss of £450 on the realisations of a small parcel of shares which they had not thought it advisable to keep. The London expenditure was only commensurate with the interests of the company. He was inclined to think that the shareholders did not recognise the magnitude of these interests. He proceeded to give a lengthy account of the work accomplished in the year under review, and said that he hoped the time would soon come when the Daggafontein Gold Mining Company, in which they had a large interest, would be allowed by the Government to locate its position, and so put an end to the long prospecting work. He had great hopes as to the future of the Delagoa Bay Company. With regard to the sale of the Consolidated South Rand Mines Deep shares, they had realised by the transaction over £60,000, and they had the right to repurchase at any time within the next five years 80,000 of these shares at practically the same price at which they had sold them. He had thought that all the members of the board would be unanimous as to the wisdom of having a strong cash position.

A lengthy discussion followed, in which the wisdom of the board's policy was freely discussed, after which Lord Oranmore and Browne and Mr. G. Lawson Johnston were reappointed to the board, and the nomination of Messrs. Preen and Carrick, who were nominated by shareholders, was negatived by a large majority.

The auditors were also re-elected, and the meeting terminated with a vote of thanks to the chairman.

LONDON AND RIVER PLATE BANK.

The forty-fourth ordinary meeting of the London and River Plate Bank, Limited, took place on Tuesday at River Plate House, Finsbury Circus, E.C., Mr. Thomas S. Richardson (the chairman of the company) presiding.

Mr. George R. Hutchinson (sub-manager and secretary) read the notice calling the meeting and the auditors' report.

In moving the adoption of the report and accounts, the chairman dwelt upon the successful year the bank had enjoyed; upon the great increase in its business, upon the prosperity of Argentina, and upon the need for increasing the capital of the bank. After analysing the balance-sheet and commenting upon the large growth in the deposits he went on to say:—The next item in the profit and loss account is the interim dividend paid, £72,000, and then there is the balance carried down of £262,000. The balance brought forward last year was £44,000, and the gross profit is *pro tanto* so much larger than it would have been on account of the £37,000 put on the other side—it is now £560,000. That leaves a balance brought down of £262,000. The report states that the balance available, after making ample allowance for bad and doubtful debts, and deducting £60,000 rebate of interest on bills not due, amounts to £262,000, including £44,000 brought forward. The directors recommend the following distribution:—To pay 12 per cent., £108,000, payable on the 14th inst., making, with £72,000, the interim dividend paid in June last, a distribution of 20 per cent. for the year on the paid-up capital of the bank, free of income-tax. (Applause.) We put to reserve fund £100,000, to pension and benevolent fund £10,000. As the bank gets older those in its service also get older, and every year we have to look forward to some of our clerks retiring, either through age, or through illness. The older the bank gets the greater number of its servants require to benefit by the pension fund. I hope, therefore, you will heartily agree with us in adding that £10,000 to the fund. (Applause.) We shall then carry forward again a little more than last year, namely £44,000. With these remarks, I won't detain you any longer. I won't say anything about the future of the bank. You know I am always sanguine, and always optimistic. I believed in the bank when it was at a very low ebb, when it was in trouble, and now I believe in it when it is at the full tide. (Applause.)

Mr. Essex E. Reade seconded the resolution, which, on being put to the meeting, was carried unanimously.

The dividend of 12 per cent., making a total distribution for the year of 20 per cent., was also agreed to.

The election of Mr. Kenneth Mathieson to a seat on the board was confirmed, and the retiring directors, Messrs J. G. Griffiths, Essex E. Reade, and B. D. Tabor, were re-elected.

The auditors, Messrs Deloitte, Plender, Griffiths, and Co., were also re-appointed.

A series of resolutions were agreed to, making certain alterations in the articles of association, and increasing the directors' remuneration to £8,000 per annum.

Votes of thanks were passed to the chairman, directors, and staff, and the meeting separated.

Lloyds Bank.—The balance-sheet for November shows liabilities consisting of current and deposit accounts £64,220,103, and bills accepted or endorsed £4,270,467, and assets of cash in hand and at Bank of England £10,020,658, cash at call and short notice £4,945,918, bills of exchange £8,803,279, Consols and other investments £12,342,934, and advances to customers and other securities £33,128,680.

Australasian Gold Mining Company.—The total expenditure in the 12 months to June 30 came to £527, whilst the receipts from tributors' royalty, rents, and transfer fees equalled £1,008, showing a small profit of £481. Recently the tributing company applied for a reduction of the royalty to 7½ per cent., apparently owing to the results won not being considered satisfactory. This was not granted, and a meeting of the shareholders of the tributing company has been called to decide whether the lease should be continued or abandoned.

Australian Shale Syndicate.—The income in the year 1905 was only £447 from the sale of shale and transfer fees, and as the expenditure amounted to £1,893, there was a loss of £1,446. Allowing for the previous credit of £80 the nett debit was £1,366, which is deducted from the redemption policies, reducing this account to £860, shown in the balance-sheet as a credit carried forward. There are 10,000 £1 unissued shares, and the directors propose to increase the capital by 15,000 shares; also to create an issue of first mortgage debenture stock for £25,000.

AFRICAN LAKES CORPORATION, LIMITED.

The accounts just issued bring the history of this company down to December 31, 1905, and are consequently of little value as a guide to the present position. Trouble in navigation owing to the lowness of the rivers is again complained of as entailing considerable addition to the expense of transport and causing detention of cargo in transit. In addition to this there was a heavy falling off in trade at several of the outlying stations in North-Eastern Rhodesia, while the growing of cotton has so far proved more or less a failure owing partly to drought and partly to lack of practical experience. Such a combination of adverse circumstances had a bad effect on the revenue, and trading profits fell off by no less than £7,872 to £14,258, and as a much smaller sum of £525 was brought in the total revenue, with £15 from transfer fees thrown in, was £9,540 down at £14,798. General charges, after allowing for £500 fees surrendered by the directors, took £844 less at £5,844, leaving a balance of £8,954 so the African staff, which a year ago got £1,500 to divide, but has to do without a bonus this time, and after paying a dividend of 5 per cent., compared with 10 per cent., £1,142 is carried to the new account. Liabilities to sundry creditors have increased by £24,734 to £98,347, and bills payable come to £8,296 more at £19,335, against which sundry debtors have risen by £11,987 to £75,111, and bills receivable by £5,595 is £23,818, but stocks, land, buildings, steamboats, and other properties in Africa are £12,234 down at £197,118. Cash is £22,075 higher at £32,210, and the company also holds investments valued at £5,250. With regard to the outlook the directors, of course, are hopeful, and talk of an improved yield of cotton during the current year, in spite of the continued drought and the fact that the acreage is now about half that of 1905. Tobacco is also being experimented with, and rubber growing is likewise receiving attention, the estate at Chombe, near Lake Nyasa, being regarded as a valuable asset.

ADELAIDE ELECTRIC SUPPLY CO., LIMITED.

During the twelve months ended August 31 this company added the equivalent of 12,002 8 c.p. lamps to its system, making a total connected of 75,204 lamps, on which the gross profits amounted to £9,506 compared with £6,643 and £4,828 for the two preceding years. Adding £555 from interest and transfer fees, and deducting £881 for head office charges and £57 for loss on the Port Adelaide undertaking, the nett balance was £9,124, and with £173 brought forward the disposable balance came to £9,297. Of this £500 was written off cost of issue of 5,000 preference shares and £1,000 was allowed for depreciation, and after paying the preference dividend the ordinary shares received 2½ per cent., leaving £792 to be carried to the new account. Capital expenditure for the year was £17,321, part of which was to enable Port Adelaide and the intervening suburbs to be supplied from the Adelaide station, with consequent increased economy and efficiency. The total outlay on this account to date is £188,922, and as £205,245 has been received from the shares issued, the company has a good cash balance of £20,599, of which £16,500 is at present lent at short notice. Sundry creditors amount to £3,650 and exceed debtors by £826, but stores are valued at £2,722, and for a new company the position seems fairly promising.

INGALL, PARSONS, CLIVE AND CO., LIMITED.

The struggle to pull this company round has not been marked with any appreciable success, and the modest improvements of the two preceding years has given place to a drop of no less than £2,027 to £10,286 in trading profits for the twelve months ended September 30. At the same time the income from interest on investments and transfer fees fell to £148, so that the total income was £2,356 lower at £10,434, but further debentures were paid off during the year, resulting in a smaller charge for interest, and after providing for depreciation, &c., the nett balance came to £2,194 compared with £3,936. Adding £685, or £364 less brought in, the total available was £2,106 down at £2,879, and the directors are only able to pay half the dividend on the 10 per cent. preference shares against 7½ per cent. a year ago by reducing the sum carried forward to £157. Outlay on freehold properties amounted to £514, making a total of £23,318, and neither on this nor on goodwill, valued at £51,052, of which £21,860 is represented by deferred shares, has it ever been considered necessary to make any provision for depreciation. The sinking fund on leasehold properties, however, has been increased by £393 to £2,908, and the nett result of the changes in plant was a reduction of £745 to £23,517. Sundry creditors are down £156 to £8,056, against an increase of £2,325 to £41,108 in sundry debtors, after allowing for a reserve of £4,431, but stocks show a decrease of £2,997 at £51,755, and in addition to a reduction of £1,010 to £10,148 in cash the company has had to dispose of all but £25 of its investments.

PAINE AND CO., LIMITED.

In the year to May 31 this company's gross sales were £20,305, and after providing all expenditure the nett balance is £4,339 a result which the directors consider satisfactory because of the losses occasioned by the fire in October, 1905. Debenture interest and preference dividend require £1,739, and £120 is applied to the debenture redemption fund, leaving enough to pay a dividend of 10 per cent. on the ordinary shares with a trifling balance over. The business is a comparatively small one, the share capital being only £42,000, while about £38,000 is owing on debentures and mortgages. The freehold and leasehold properties and goodwill are valued at £53,480 and the plant and rolling stock at £11,259. No reserves are possessed apart from £1,000 on book debts, rents and loans, and the debenture redemption fund of £200. Trading accounts, however, are well in favour of the company, and there is cash of £3,379 apart from stocks of £6,112.

The SUBSCRIPTION LIST will CLOSE on or before WEDNESDAY, the 19th instant.

STATE OF SAN PAULO

(Republic of the United States of Brazil).

ISSUE OF 2,000,000 FIVE PER CENT. EXCHEQUER BONDS TO BEARER, AT £94 PER CENT.

In BONDS of £1,000, £500 and £100.

Principal and Interest payable in sterling in London, at the Counting House of Messrs. J. Henry Schroder & Co.

Part of £3,000,000, the remainder having been acquired by the National City Bank of New York, Capital and Interest of which are payable in American Gold Currency.

Redeemable at par by four equal annual drawings, first repayment being due on the 1st December, 1908, or earlier by purchase in the market at any price below par, and accrued interest, such purchases to be made as and when funds become available out of the collection of the surtax mentioned below.

Payment of principal and interest are specially secured by the hypothecation of the gold surtax of 3 frcs. per bag of coffee exported from the State, provided for in Article 29 of the Law No. 984, dated 29th December, 1905. This surtax is to be paid over weekly to Messrs. J. Henry Schroder & Co.'s Agents at Santos until an amount sufficient for the service of the Loan has been provided as hereinafter mentioned.

Payment of principal and interest are furthermore secured by the general guarantee of the State, subject to the rights of the existing outstanding external Loans.

Messrs. J. HENRY SCHRODER & Co., offer for public subscription the above-named £2,000,000 Five per Cent. Exchequer Bonds.

The price of issue is £94 per cent., payable as follows:—

5 per cent. on application.
5 per cent. on allotment 3rd January, 1907.
15 per cent. on 1st February, 1907.
15 per cent. on 15th March, 1907
20 per cent. on 25th April, 1907.
34 per cent. on 31st May, 1907.

£94 per cent.

The instalments carry interest at the rate of 5 per cent. per annum from their due dates till 1st June next, and Scrip Certificates will be issued in due course in exchange for the Allotment Letter, and for the amount due on allotment with a Coupon of £0 14s. 5d. per £100 attached.

The Exchequer Bonds, with Coupons attached for six months' interest payable on 1st December and 1st June in each year, will be delivered in exchange for the fully-paid Scrip Certificates as soon as possible after payment of the last instalment.

The present Loan is made in virtue of the authority contained in Article 29 of Law No. 984 of the State of San Paulo, dated 29th December, 1905, for the purposes specified therein, and the outstanding £1,100,000 of Treasury Bills maturing in London on the 1st August, 1907, is to be repaid out of the proceeds thereof.

The above-mentioned surtax of frcs. 3 per bag of exported coffee is to be collected by the Government during the whole period in which this Loan is outstanding, and applied to the service of the Loan in the following manner:—The revenue thus collected is to be paid to Messrs. J. HENRY SCHRODER AND Co.'s Agents at Santos, free of all deductions, on the Monday of each week, commencing on 17th December, 1906, and continuing until a sufficient amount to meet the first year's interest has been received. The payments to Messrs. J. Henry Schroder & Co.'s Agents are to commence again on the 1st August, 1907, and continue until sufficient funds to meet the interest and redemption for the year 1908 have been accumulated. Thereafter the payments sufficient to meet the annual service of the Bonds are to commence on the 1st December in each year.

The exports of coffee from the State during the last five years have been as follows:—

1901.	1902.	1903.	1904.	1905.
9,668,000 bags*	8,682,000 bags.	8,919,000 bags.	6,556,000 bags.	7,476,000 bags.

* Abnormally large crop.

Had the surtax of 3 frcs. per bag been in force during these years, it would have produced Frcs. 121,293,000, or 25.25 equal to £4,803,700, or a yearly average of £960,750.

The revenue from the ordinary tax on coffee, not including the surtax, amounted to an average, at the rate of 15d. per milreis, of about £1,200,000 per annum during the last five years, and it has been specially stipulated in the contract with the State of San Paulo that this tax cannot be specially hypothecated for any purposes whatsoever before this Loan has been repaid.

The following particulars concerning the revenue of the State of San Paulo, as also the exports of coffee, have been obtained from the official Reports of the State, and the currency amounts have been converted into Sterling at the exchange of 15d. per milreis:—

Revenue from all sources

1901.	1902.	1903.	1904.	1905.
£3,786,875*	£2,353,125	£2,142,937	£2,348,750	Not yet ascertained.

* Abnormally large coffee crop.

The outstanding external Loans amount to about £3,984,000, the interest and redemption on all of which require annually about £294,960.

There is a further external Loan outstanding of £3,870,000, to which the Sorocabana Railway has been specially hypothecated. The amount of the interest and redemption of this Loan is taken out of the earnings of the railway.

Allottees will have the option of paying up in full on allotment, or at the date of any subsequent instalment, under discount at the rate of 5% per annum. Failure to pay any instalment when due renders all previous payments liable to forfeiture and the allotment to cancellation.

In case no allotment is made, the deposit will be returned forthwith. In case a smaller amount is allotted than that applied for, the difference will be applied towards the amount payable on allotment.

A copy of Article 29 of the Law authorising this Loan and creating the surtax of 3 francs per bag of exported coffee (Law 984, dated 29th December, 1905), and translation thereof, can be seen at the Offices of Messrs. Burcham & Co., 50, Old Broad Street, E.C.

Prospectuses and Forms of Application may be obtained at the Counting House of Messrs. J. HENRY SCHRODER & Co., 145, Leadenhall Street, E.C., and from Messrs. W. GREENWELL & Co., 2, Finch Lane, E.C.

REPORT OF THE DIRECTORS

To be presented at the First Annual General Meeting of the Company, to be held in Hall 201, Salisbury House, London Wall, London, E.C. at Noon on Friday, 21st December, 1906.

INCORPORATION.

The Company was incorporated on the 8th August, 1905, its chief objects being the acquisition and exploitation of mining properties in the Russian Empire. The Directors have pleasure in being able to report that two such properties have been acquired as going concerns and successfully launched as subsidiary undertakings, while other interests have been acquired which are expected to reach the stage of flotation early in the coming year. There are, in addition, several important propositions in hand which are still in course of development and investigation.

ORSK GOLDFIELDS, LIMITED.

This property, which is 16,000 acres in extent and situate in the Government of Orenburg, was examined on behalf of the Company by Messrs. John Taylor & Sons, and fully described at the Extraordinary General Meeting of Shareholders, which was held on the 6th March of the present year. It was formed, in accordance with the announcement then made, into a separate undertaking under the name of the Orsk Goldfields, Limited, with a nominal capital of £600,000 in 600,000 shares of £1 each, whereof 500,000 shares, credited as 15s. paid, were issued to this Company as consideration for the sale. Of the shares so issued, 249,000 were disposed of to the H. O. Siberian Exploration, Limited, on terms which resulted in the whole of the issued capital being fully paid up without recourse to the available funds of this Company. The Orsk Goldfields, Limited, which still has 100,000 of its shares in reserve, is in possession of a lease of the property, which may be converted into a purchase at any time during the currency of such lease, the amount paid as rent being deducted from the stipulated purchase price. The property is a going concern from which results of a very satisfactory character are already forthcoming. Good progress has been made during the past six months with the new works and the further development resolved upon by the Board of the Orsk Goldfields, Limited, and substantially improved returns may with confidence be anticipated at an early date. The property is, however, of such vast extent, and the known deposits are so numerous, that a considerable time must of necessity elapse before its value can be fully demonstrated.

TROITZK GOLDFIELDS, LIMITED.

Under an agreement entered into with the H. O. Siberian Exploration, Limited, at the time when the Company was founded, the Company acquired the right to purchase, also as a going concern, another property situate in the Kotchkar district of the Government of Orenburg. This property was likewise reported upon by Messrs. John Taylor and Sons, and negotiations extending over some months ensued, resulting in its eventual acquisition upon favourable terms. It was formed into a separate undertaking under the designation of the Troitzk Goldfields, Limited, also with a nominal capital of £600,000, in 600,000 shares of £1 each, whereof 500,000 shares, credited as 14s. paid, were issued to this Company as the consideration for the sale. In this case also arrangements were made with the H. O. Siberian Exploration, Limited, whereby they acquired 249,000 of the said shares on terms which admitted of the whole of the capital being fully paid up without recourse to the working capital of this Company. The purchase of the property is now complete, and the Troitzk Goldfields, which has likewise 100,000 shares in reserve, is in full possession, with every prospect of a highly prosperous career.

NEKRASOV GOLD.

The Company has acquired, and is now working for its own account, an extensive property situate in the District of Atchinsk, in the Government of Yenissei, which was lately reported upon by Mr. Hallett Winmill. The hope is entertained that arrangements may be sufficiently advanced to admit of this property being launched as a separate undertaking early in the coming year.

PAVLODAR COPPER.

The Company has acquired the right to investigate for a period of about three years a considerable number of coal and copper properties situate in the Pavlodar District of the Province of Semipalatinsk. Coupled with the right of investigation is an option to purchase upon favourable terms. After obtaining a preliminary report upon the property, the Directors sent out an expedition some months ago thoroughly to prospect and open up the promising lodes that were found to exist on three of these copper claims, situate some miles apart, and they are glad to report that the advices so far received with respect to these operations are very encouraging in their character.

CAUCASUS COPPER, LEAD AND ZINC.

An option has been acquired over an extensive copper, lead and zinc concern in the Caucasus, with respect to which it is intended to make an exhaustive investigation at the earliest possible date.

SUVUNDUK ALLUVIAL.

A perpetual lease on a royalty basis, terminable at the pleasure of the Company, has been acquired over a stretch of 20 miles on the Suvunduk River, which has been long known as one of the most prolific of auriferous alluvial streams in Russia. Arrangements have been made for a thorough survey of this proposition in the ensuing spring. Present indications lead to the anticipation of valuable results.

BUSINESS UNDER NEGOTIATION.

Besides the interests above enumerated, the Company has under examination and negotiation various propositions of importance which are actively engaging the attention of the Board at the present time. To the great regret of his colleagues and himself, the Managing Director will be unable to be present at the General Meetings of the Company now convened, owing to the urgent necessity for his presence in Russia in connection with some of these negotiations.

SUNDRY INVESTIGATIONS.

In the course of the period to which the accounts relate, various other options have been acquired. Some of these, upon investigation, the Directors have not considered it desirable to excercise, and a sum of £2,950 has been written off in connection therewith.

AGREEMENT WITH MANAGING DIRECTOR.

In order to secure to the Company for the term of ten years the benefit of Mr. Orkin's services, the Board are glad to be able to state that a new agreement has been concluded with him on mutually satisfactory terms.

CAPITAL AND RESERVE.

The whole of the capital of the Company has been issued, some part of it at premiums amounting in the aggregate to £40,340, which has been carried, less preliminary expenses, to a Reserve Fund.

INVESTMENTS.

It will be observed that, although the share investments of the Company in its subsidiary undertakings stand in the market at a substantial premium, they have been taken into the accounts now presented at par.

AMENDMENT OF ARTICLES.

The magnitude and character of the Company's business, already in hand and projected, appear to the Directors to justify and necessitate an increase in the funds available for the prosecution of its operations. Experience has likewise shown that the Articles of Association need amendment in some respects. They accordingly propose to submit to an Extraordinary General Meeting of Shareholders, to be held at the conclusion of the Annual General Meeting, the resolutions indicated below in which their conclusions are embodied.

ADDITIONAL DIRECTORS.

In view of the possibility of its becoming desirable to strengthen the Board, it is proposed to increase the maximum number of Directors from seven to nine. The number of Directors is, at present, five.

REMUNERATION OF DIRECTORS.

The existing Articles provide for the remuneration of Directors by a standing fee of £100 per annum, and a participation of 2½ per cent. in profits available for dividend. Since this latter provision is open to various interpretations and might conceivably lead to distributions of profits which it would be expedient in the corporate interests to conserve, the Directors feel that the position is one in which they ought not to be placed. They accordingly propose that the standing fee should be increased to £600 per annum, with an additional £150 per annum for the Chairman, and that their right to participate in profits should be expressly limited to the profits actually divided. In respect of their services from the incorporation of the Company to the present time, it is proposed that they should be paid the sum of £5,000 in lieu of the benefits accruing under the Articles as they stand.

INCREASE OF CAPITAL.

Since it is the policy of the Company to retain a majority holding in any undertaking launched under its auspices, and not to dispose of any larger portion of its interest in such undertakings than may be necessary to reimburse it in its outlays and provide the working capital required, it will be obvious to Shareholders that its business is one for which there should be no lack of available funds, in order that transactions may be carried through without recourse to extraneous assistance. It is accordingly proposed that the capital of the Company shall be increased from £100,000 to £135,000, whereof an issue of 16,000 shares, at a premium of £11 10s., shall be offered to Shareholders pro rata to their holdings. The H.O. Siberian Exploration, Limited, has agreed to guarantee this issue, if determined upon. In consideration of such guarantee, it is stipulated that the right shall be granted to the guarantors for a period of nine months to subscribe for 6,000 shares or any less number at £17 10s.; for eighteen months, 6,000 shares or any less number at £20; and for twenty-four months 7,000 shares or any less number at £25.

EXTRAORDINARY GENERAL MEETING.

Notice is herewith included, convening an Extra-ordinary General Meeting of the Company for the purpose of considering the above proposals, which the Directors commend to the approval of the Shareholders. A copy of the proposed agreement with the H. O. Siberian Exploration, Limited, guaranteeing the proposed new issue, can be inspected during the usual business hours at any time before the meeting at the Offices of the Company's Solicitors, Messrs. Morley, Shirreff and Company, 53, Gresham House, Old Broad-street, London, E.C.

AUDITORS.

The Directors have not exercised their right to fix the remuneration of the Auditors for the period since the formation of the Company, which must accordingly be fixed by the Meeting.

The retiring Auditors are Messrs. Deloitte, Plender, Griffiths and Co., who offer themselves for re-election.

By Order of the Board,

ERNEST LESSER, Secretary.

11th December, 1906.

FRANCIS J. DORMER, Chairman.
HEYMAN ORKIN, Managing Director.

In accordance with the Companies Act, 1900, we certify that all our requirements as Auditors have been complied with.

We report that we have audited the above Balance-Sheet and Account with the books and vouchers of the Company, and, in our opinion, such Balance-Sheet is properly drawn up so as to exhibit a true and correct view of the state of the Company's affairs at 30th November, 1906, as shown by the books of the Company.

5, London Wall Buildings, Finsbury Circus, E.C.,
11th December, 1906.

DELOITTE, PLENDER, GRIFFITHS AND CO.,
Auditors, Chartered Accountants.

This Prospectus has been duly filed with the Registrar of Joint Stock Companies.

The SUBSCRIPTION LIST will CLOSE this day (SATURDAY), the 15th December, 1906.

THE FAIRFIELD SHIPBUILDING & ENGINEERING COMPANY, LIMITED.

(Incorporated under the Companies Acts, 1862 to 1886.)

Authorised and Issued Capital - - - - £500,000

IN

25,000 ORDINARY SHARES OF £10 EACH.
25,000 £6 PER CENT. CUMULATIVE PREFERENCE SHARES OF £10 EACH.

The Company has also issued 4½ per cent. First Mortgage Debenture Stock for £250,000, all of which is now outstanding.

The Company also issued in the year 1897 £100.000 5 per cent Second Mortgage Debenture Stock, of which there is now outstanding Stock to the amount of £80,000. The first proceeds of the present issue will be applied in redemption of this outstanding Stock, so that the Stock of the present issue shall rank next to the First Mortgage Debenture Stock. Notice of the repayment of the existing Second Mortgage Debenture Stock has been given to the Holders, and also to the Trustees for such Stockholders, and has been accepted by the latter. Provision will be made for payment to such Trustees of the outstanding balance of £80,000 and premium and interest to date, out of the first proceeds of the present issue, to be held by them until the 31st December, 1906, and to be then applied by them in repayment to such Holders in terms of the notice given to them.

Issue of £250,000 5 per Cent. "A" Mortgage Debenture Stock at par, payable as follows:

On Application	10 per cent.
On Allotment	10 „
On 10th January, 1907	40 „
On 11th February, 1907	40 „
	100 per cent.

Payment may be made in full on or after allotment under discount at the rate of 3 per cent. per annum.

The "A" Mortgage Debenture Stock will be issued in multiples of £1, and will be registered in the books of the Company. Interest for each half-year ending 30th June and 31st December will be payable on the 15th July and 15th January immediately following such dates, the first payment being made on 15th July, 1907. In the case of this first payment, interest on application-money will be calculated from the date of allotment, and on the balance from the actual date of each instalment.

The security for the "A" Mortgage Debenture Stock will consist of:—

(1) Subject to the 4½ per Cent. First Mortgage Debenture Stock, and to the terms of the Trust Deed, dated 12th, 13th, 14th and 19th December, 1889, and made between the Trustees therein named and the Company, securing the same, a specific charge on the land, buildings, and fixed machinery of the Company;

(2) A specific first charge on the present holding of the Company in the Share Capital of the Coventry Ordnance Works, Limited, hereinafter mentioned; the terms and conditions of such security being expressed in a Trust Deed to be executed by the Company in favour of Trustees for the "A" Mortgage Debenture Stockholders.

The "A" Mortgage Debenture Stock will be redeemable at par on the 31st day of December, 1956. To secure its redemption a Sinking Fund Policy, at a fixed annual premium, has been taken out with the Sun Life Assurance Society, covering the redemption of the "A" Mortgage Debenture Stock in the year 1956 and the Trust Deed will contain a covenant by the Company for the due payment of the premiums on this Policy.

TRUSTEES FOR THE "A" MORTGAGE DEBENTURE STOCKHOLDERS.

George Strachan, Esq., 34 Leadenhall street, London, E.C.

PROSPECTUS.

The Fairfield Shipbuilding and Engineering Company, Limited, was constituted in the year 1889, to take over the well-known Fairfield Works, Govan, Glasgow, one of the largest and best equipped in Great Britain, for the construction of the highest class of Warships and Vessels for the Mercantile Marine.

Large sums have been expended during the past few years out of profits on new machines, modern driving plant, extensions and improvements on the Works generally. The Company recently acquired a large holding in the Coventry Ordnance Works, Limited, which will enable it to complete, equip, and fit out Warships with armament of the largest dimensions.

The proceeds of the present issue of Debenture Stock will be applied as follows:—

To redeem the existing balance of £80,000 Second Debenture Stock.

Towards recouping the moneys already expended in acquiring the above-mentioned interest in the Coventry Ordnance Works, Limited, and

To provide funds for extension of the operations and further expenditure at Fairfield Works.

The Company's heritable property, buildings, wet dock, machinery, &c., specifically charged as security in the Trust Deeds for the First and Second Mortgage Debenture Stockholders, are valued in the Books of the Company as at 30th June, 1906, after deduction for depreciation, at £567,482 2s 3d. The actual value, however, is considerably in excess of this figure, as it does not include the sum of about £90,000 that has been expended on the Works during the past few years out of profits. The above-mentioned holding in the Coventry Ordnance Works, Limited, cost the Company £187,500, at which sum it stands in the Company's Books.

The following Certificate of Messrs Price, Waterhouse & Co., London, and Messrs Grahams & Co., Glasgow, who are the Auditors to the Company, relates to the profits for the five years ending 30th June, 1906:—

4th October, 1906.

To the Directors of the Fairfield Shipbuilding and Engineering Co., Ltd., Govan, Glasgow.—Gentlemen,—We have audited the accounts of the Fairfield Shipbuilding and Engineering Company, Limited, since its incorporation as a public Company in the year 1889, and the following are the profits, as shown by the audited Accounts for the five years ending 30th June, 1906, before charging Depreciation and £11,250 for Interest on the First Mortgage Debenture Stock, viz.:—

Year ending 30th June,	1902	£161,811 12 11
Ditto	1903	158 581 1 10
Ditto	1904	155,792 8 6
Ditto	1905	103,469 11 5
Ditto	1906	170,307 1 8

or an average per annum of £149,992 7s 3d.

We are, Gentlemen, yours faithfully,
PRICE, WATERHOUSE & CO.
GRAHAMS & CO., C.A.

It will thus be seen that on the average profits the interest on the present issue of Debenture Stock will be covered many times over.

The Company has a Reserve Fund of £100,000 invested in the business.

At the time of the acquisition of the Company's property and Works in 1889, the Vendors received, as part of the purchase price, the above-mentioned £250,000 Ordinary Shares of the Company fully paid up, and also fully-paid First Mortgage Debenture Stock to the amount of £139,390.

The following Contracts have been entered into by the Company within a period of two years prior to the date of this Prospectus, not being Contracts entered into in the ordinary course of business carried on by the Company, viz.:—

Contract dated 1st October, 1906, between the Company and Messrs E. Roehrich & Co., relating to this Issue; and Policy dated 1st October, 1906, with the Sun Life Assurance Society, covering the repayment of £250,000 on the 31st day of December, 1956.

Copies of the Draft Trust Deed for this Debenture Stock, the Trust Deed securing the First Mortgage Debenture Stock, the Memorandum and Articles of Association of the Company, and the above Contract and Policy, the Balance-sheets and Auditors' Certificate above referred to, and the Auditors' last statutory report, may be inspected by intending applicants at the Offices of Messrs Lyne & Holman, 5 and 6 Great Winchester street, London, E.C., Solicitors to the Company, any day before the closing of the subscription list between 11 a.m. and 4 p.m.

No part of this Issue is underwritten, but certain Holders of the outstanding Second Mortgage Debenture Stock will be given a preference in regard to applications for the present Stock.

Applications will be made to the London and Glasgow Stock Exchanges for a settlement and an official quotation.

Applications on the Form accompanying the Prospectus should be filled up and sent to the Bank of Scotland, London or Glasgow; or Parr's Bank, Limited, 4 Bartholomew lane, London, E.C.; accompanied by a deposit of £10 per cent. upon the amount of the Debenture Stock applied for. Where no allotment is made the deposit will be returned in full by post. In case a smaller amount of Debenture Stock is allotted than is applied for, the excess deposit will be applied in or towards payment of the amount due on allotment. Failure to pay any instalment when due will render the allotment liable to cancellation and the previous payments to forfeiture.

Prospectuses and Forms of Application can be obtained at the Offices of the Company, or from the Bankers, Brokers, Solicitors, or Auditors.

The Investors' Review

EDITED BY A. J. WILSON AND SON.

Vol. XVIII.—No. 468. SATURDAY, DECEMBER 22, 1906. (Registered as a Newspaper.) Price 6d.
New Series.

PUBLISHER'S NOTICES.

The Investors' Review is a Subscription Journal, and will be delivered to subscribers in London by the first post, or sent to the country and abroad by the first mail, on Saturday Mornings on the following terms:—

One Year - £1 1s. Six Months - 11s. Three Months - 5s. 9d.

Short of Three months the Price is **6d.** per Copy *Inland*, and **6½d.** *Abroad, Post Free.*

Subscribers can change their address as often as they please, but notice of change must reach the Publishing Office not later than the First Post on Friday Morning.

For a fortnight before the Subscription expires the **Investors' Review** will be forwarded in a different coloured wrapper.

Cloth cases for binding the Half-Yearly Volumes price **1s. 6d.**, postage **4d.** extra. Bound Volumes **16s. 6d.**, or **17s. 3d.** post free.

Cheques and P.O. Drafts should be made payable to

CLEMENT WILSON,
"Investors' Review" Office,
Norfolk House, Norfolk Street,
London, W.C.

Investment Queries.

Questions about Public Securities will be answered each week in the **Investors' Review** on the following terms:—

For each question thus answered the charge will be **One Shilling.** Where more than One Question is put they should be numbered, and a copy kept. No Security is ever named in the Answers Printed.

Private Letters giving fuller answers can be had if desired The minimum charge for such letters is **Ten Shillings** each; but for that Three Questions will be answered. For all additions beyond three the charge will be **Half-a-Crown** per query.

Lists of Investments furnished by correspondents will be annotated, or new lists of suggested investments will be supplied on the same terms, viz.:—**10s.** for the First Three, and **2s. 6d.** for each Additional one. But no group of securities forming a trust calculated to yield a given income will be supplied or less than **One Pound.**

The charge for Wires about New Issues appearing on days that prevent timely criticism in the **Investors' Review** will also be **2s. 6d.**, plus a prepaid telegram form.

The Editors cannot undertake to return rejected communications.

Letters from correspondents must, in every case, be authenticated by the name and address of the writer.

The Editors desire it to be understood that a charge is made for the insertion of reports under the heading of Company Meetings, and they cannot accept responsibility or statements made therein.

The Investors' Review.

The Victoria Falls Power Company, Limited.

No copy of this prospectus reached us last week, and the utmost care seems to have been taken to keep it out of the hands of papers known to be critical towards the preposterous scheme it set forth. Our own experience in connection with this, as we believe, abortive attempt to get money out of the investing and speculative classes here is worth relating in illustration of the peculiar ideas as to the functions of the Press entertained by his Grace the Duke of Abercorn, the Most Hon. the Marquess of Winchester, and other high and mighty personages figuring on the "front page." These hereditary custodians of our morals and religion especially of our religion probably knew nothing about it, living, as they do, in the serenity of their feudal Olympia, but it is none the less the fact that one device after another was tried in order to prevent this Journal from exercising its right to say what it thought about this scheme. Early in the week the advertising agent of THE INVESTORS' REVIEW was asked to propose to us the writing and insertion of an article, "which would be paid for," favourable to the project. He replied that to make a proposition of that kind to his employers was more than his situation was worth. Then he was informed that THE INVESTORS' REVIEW was on the list for a page advertisement of the forthcoming prospectus, and when he went on Friday morning to see whether this was so, he was told to come back at 6.30 p.m. He went, and waited until seven o'clock, only to be informed then that the page was there all right, but to be given conditionally upon the publication of a favourable notice in the editorial columns of the paper. Naturally, he went away indignant, but we confess to a feeling of considerable amusement. The tactics were childish throughout. All that we could say about the venture without possessing a copy of the prospectus had been in type long before six o'clock on Friday evening, as we have to go to press early in order to try and catch those unholy nuisances, the too early trains. The hope of an advertisement to come did not colour what we had to say, and if an order had been given for twice the number of pages bestowed upon the *Statist*, it would not have altered what had been said by a syllable.

Such, however, appears to be the conception of the case with which the Press can be swayed and fooled entertained by the high personages named above, their colleagues and servants. They seem to imagine that every newspaper man's soul and conscience is at their call, that they can get an "option" over opinions for a few pounds paid or promised. That they should descend to the employment of tactics of this description is enough to warn everybody off their neighbourhood. A clean, straightforward enterprise does not require to have the way for its launching greased or paved in this fashion. But this project does not seem to us clean or straightforward in any sense. First of all, the company is registered in Southern Rhodesia, so as to avoid compliance with our company laws. The seven subscribers necessary to constitute it are all resident in Salisbury, Rhodesia. Then it is plain that the principal immediate purpose was to find money for the Chartered Company through the African Concessions Syndicate, of whose shares the said Chartered Com-

pany holds a majority. That syndicate is to have a million in fully-paid £1 ordinary shares of the Falls company, plus £120,000 in cash in payment for the various interests it possesses, and of these shares 400,000, together with £95,000 in cash, were to go to the Chartered Company, which, in addition, would have its proportion of whatever the Concessions Syndicate retained. Then 100,000 fully-paid shares were to be handed to the subscribers for the £625,000 five per cent. debentures, "if allotted," and a like number were to be handed over in payment for the patent rights relating to the system of hydraulic accumulation of energy. We have no doubt at all that the Chartered Company wants the money badly, for we may be quite sure that if it had been flourishing its report would have been issued before now. But, really, we cannot see that the acquisition of a further amount of waste paper, plus a small amount in cash, small in relation to the company's devouring necessities, would have helped it very much. It already possesses a considerable accumulation of waste paper assets, and, unless these ordinary shares could have been marketed, it would have been in a few weeks or months no better off than before. The thing wears an aspect of the last throw of the gambler.

For the rest, there does not appear to be any serious intention to carry out immediately or soon the electric project so much gabbled about. A map, indeed, accompanies the prospectus, with a broad black line drawn straight from the Victoria Falls to the Witwatersrand, much in the style in which the Emperor Nicholas I. of Russia is said to have indicated the route for the Petersburg-Moscow railway, but the prospectus itself does not lead us to infer that anything more is now contemplated than the erection of that steam power station on the Witwatersrand to compete with already existing sources of power. There is a good deal about Niagara and about the feasibility of the transmission of electricity over a distance of nearly 750 miles, but all that appears to be really aimed at is the erection of the steam power station. That is to be the job handed over to the Allgemeine Electricitäts Gesellschaft, and all the rest is rhetorical swansdown and goose feathers. This power station is in one place said to be contemplated to be of a capacity to generate 24,000 horse-power, but so far the only contract mentioned is that with the Consolidated Gold Fields of South Africa, a kind of hanger-on and back-stop for the Chartered Company, which speaks of the supply of a total amount of energy of nearly 10,000 horse-power for a period of ten years, dating from January 1, 1909. All the contracts, moreover, would seem to be provisional upon the sale of the capital offered to the public, which consists of £1,000,000 in ordinary shares—mostly for the benefit of the Chartered Company and its associates—plus £625,000 in preference shares and an equal amount in debentures. For all this the company acquires a preferential right to develop energy amounting to 250,000 electric horse-power by help of the Victoria Falls. A company, called the General Electric Power Company, of Driehook, on the Witwatersrand, with an "installed capacity" of 5,000 horse-power, is also apparently to be bought up as being a dependant of the Consolidated Gold Fields Company. By this acquisition the Victoria Falls Power Company is to be able "to sell power immediately on a profitable basis." Surely a narrow foundation this upon which to capitalise an adventure at a total of £6,000,000 including £3,000,000 of share capital and £3,000,000 of debentures! And where has this British South Africa Company the money with which to guarantee interest at the rate of 5 per cent. per annum on the paid up portion of the 6 per cent. cumulative preference shares during construction up to December 31, 1908? Even if the whole of these shares are not issued, the additional burden must be considerable for a company already borne to the earth by its railway guarantees, which are excessively burdensome. And, although a preferential, or, as the prospectus scribe puts it, a "preferent," right to develop electric energy to the extent of 250,000 horse-power is graciously accorded by the Chartered Company for 75 years to the African Concessions Company, all that is now vaguely foreshadowed is the erection of an installation of 32,000 horse-power at the Falls, and the engineers remark that even for this additional capital must be raised, but they none the less dangle the bait of 10 per cent. on the preference shares, whatever the amount may be to be issued for this purpose. No wonder the public has let the abortion severely alone. It was almost still-born, and of what life it had it was bereft by the *Daily Chronicle*, the *Pall Mall Gazette*, and The Investors' Review.

To show how "contracts" can be set out so as to tell nothing in Rhodesia, and for the sake of the future, when the Chartered Company's queer history has to be written, we cut the following from the prospectus. What has the German company undertaken to do? How much money is to be paid to it for its work? What monetary consideration induced Messrs. Lewis and Marks to cease their opposition, and "stand in in the—'Haw, haw, don't you know.'"

1. December 14, 1906, between The British South Africa Company of the one part and the African Concessions Syndicate, Limited, of the other part, being the lease for 75 years above referred to.

2. December 14, 1906, between the African Concessions Syndicate, Limited, of the one part and the Victoria Falls Power Company, Limited, of the other part, being the Purchase Agreement above referred to.

3. December 14, 1906, between the Consolidated Gold Fields of South Africa, Limited, of the one part and the African Concessions Syndicate, Limited, of the other part, being the Contract to take power above referred to, providing 20,000 fully-paid Ordinary Shares in this Company for the Consolidated Gold Fields of South Africa, Limited.

4. December 14, 1906, between the General Electric Power Company, Limited, of Johannesburg, of the one part and the African Concessions Syndicate, Limited, of the other part, being the Contract for the acquisition of the undertaking for £150,000 cash.

5. December 14, 1906, between the Victoria Falls Power Company, Limited, of the one part, the Vereeniging Estates Company, Limited, of the second part, and Messrs. Lewis and Marks of the third part, relating to facilities at Vereeniging above referred to, and providing 20,000 fully-paid Ordinary Shares in this Company for the Estates Company.

6. December 14, 1906, between the Allgemeine Elektricitäts Gesellschaft of the one part and the Victoria Falls Power Company, Limited, of the other part, being the Construction Contract above referred to.

7. December 14, 1906, between the British South Africa Company and the African Concessions Syndicate, Limited, of the one part and Martin Luebeck, on behalf of the several Banks and Financial Institutions, being the conditional Agreement for subscribing the £625,000 Debentures.

Economic and Financial Notes and Correspondence.

Underground Electric Railways Company of London, Ltd.

The future alone can decide whether the stupendous railway works for which this undertaking has made itself responsible are to bring profits to its promoters, but we cannot withhold our admiration for the pluck and energy which the Americans have displayed in pouring so much money into the transit and traffic problem of London. It is unnecessary to recapitulate the circumstances under which the Underground Company was brought into existence, but it may perhaps be well to again briefly point out that it is responsible for the electrification of the District Railway and the construction of the Baker Street and Waterloo, Great Northern, Piccadilly, and Brompton and Charing Cross, Euston, and Hampstead railways. The company also holds a controlling interest in the London United Tramways, which is spreading a network of lines throughout the suburbs of London, partly to act as feeders to the tube railways which run through its heart. The Baker Street and Waterloo Railway was opened in March last, and the electrification of the District has now been completed for quite a long time, and it is certainly rather disappointing to find that neither enterprise has quite fulfilled expectations. So far as the old District lines are concerned, the results have no doubt been adversely affected by the

failures and uncertainty which characterised the new train services when first introduced, and although the trains are now running with normal regularity the traffic has not yet fully recovered from the effects of the early failures.

The Baker Street and Waterloo line, however, is undoubtedly making progress, although its traffic must expand much faster if the enterprise is to become a paying one within the proximate future. Its uncompleted condition is no doubt a serious drawback, and when the construction to Paddington is finished, we shall expect to witness a great accession of traffic to the line. The extension to the Elephant and Castle was opened on August 5, and the directors hope that the system will be completed and opened to the Great Central Station in February next and to Edgware Road in May, to be followed to Paddington on some subsequent date. The Great Northern, Piccadilly, and Brompton line has been at the service of the public just a week, and it would be obviously premature to make any reference to its probable achievements. All that can be said is that it serves some of the most populous routes and points in London, and provides the inhabitants of the northern half with better transit facilities than they have ever enjoyed before. At the same time, it would not be wise to shut our eyes to the fact that the construction of the tube made away with an immense amount of money, something like £8,000,000, and, as we estimated when dealing with the company's separate accounts in July last, the railway can hardly pay with a gross traffic of less than £600,000 a year.

Then, as to the Charing Cross, Euston, and Hampstead line. The laying of the permanent way has been completed, and the erection of all the stations is proceeding satisfactorily. The building of the rolling stock is well advanced, and so much of it has already been delivered that there is now no practical risk of any delay with regard to car equipment. In fact, the whole work of this railway is making such good progress that the directors state with confidence that it will be opened for public traffic in June next. All the work which the company undertook will then be completed, and, given time, there is reason to hope that those who have found the money will receive a due reward. Until the whole of the lines are finished and working in unison, it is, perhaps, impossible to judge of their ultimate standing. Each line cannot be judged on its individual merits, but must be regarded as part of a concrete whole, each section of which serves to help and bring business to the other.

We are a little disappointed with the operations of the London United Tramways, and rather fear that before the controlling interest passed to the Underground Electric Company there was an absence of prudence and foresight in the financing of the undertaking. With such important commitments as the company had on hand, a proper policy would have been the strengthening of the finances by putting large sums to reserves, but, instead of that, the directors very unwisely strove after the payment of high dividends on the ordinary shares. Reference is made in the report to the death of Mr. Charles Yerkes just about a year ago, but he will be ably succeeded in the chairmanship by Sir Edgar Speyer, and it is, of course, quite well known that Sir George Gibb, formerly general manager of the North-Eastern Railway, has been elected a director and deputy chairman of the board and managing director. Sir George Gibb is one of the best assets the company possesses. It may be remarked in passing that the giant power house at Chelsea has maintained a supply of current with absolutely unfailing regularity, and to the entire satisfaction of the users.

We may now turn to the balance-sheet, and naturally expect to find some big figures. About the profit-sharing notes of £7,000,000, we had our say last year, and need not go over the ground again beyond just intimating that their redemption is due in eighteen months' time, on June 1, 1908. One-half of the authorised share capital of £5,000,000 has been paid up, and the debentures issued amount to £775,000. Loans secured on stocks and shares and on Parliamentary deposits amount to £1,454,198, and £588,475 is owing to sundry creditors. A small depreciation reserve against the Chelsea power house amounts to £15,935, and the final item on the debit side is the nett amount realised to date on sale of stocks and shares, and cash received on account of construction contracts £3,033,664. This money is no doubt in part the proceeds of the sale of Baker Street and Waterloo, Charing Cross, Euston, and Hampstead, and Great Northern, Piccadilly, and Brompton debenture stocks, and also ordinary shares of the last-named company. Cost of railway construction to date, after deducting income from investments and from the Chelsea power house, is the great sum of £11,210,454, an increase on the year of approximately £3,000,000. The power house itself has cost £1,264,959, investments in stocks and shares at cost appear at £2,651,110, and Parliamentary deposits have been made to the amount of £309,751. Only £159,456 is owing by sundry debtors, and the cash balance is further reduced to the small amount of £91,542. The discount on issue of profit-sharing notes, amounting to £280,000, will have to be written off some day from profits. The aggregate of the balance-sheet is now £15,907,273 against £13,651,354 twelve months ago, and in two years the total has increased by over five million pounds.

RHODESIA RAILWAYS.

The directors of this loss-making enterprise have determined to alter the date of its financial years, in order to bring these into line with those of its struggling ally, the Mashonaland Railway Company. So from now onwards the accounts will be presented for each half-year ending March 31 and September 30, instead of, as hitherto, April 30 and October 31. It is not to be hoped that much more urgent reforms are dreamed of, in particular the giving of information up to date, not the stale and well-nigh worthless data always presented. For the accounts now issued are dated April and September, 1905, so are 15 months old, though one can form a shrewd idea of what they would be like were the directors to issue the statement for the subsequent twelve months. The tables of earnings given in the report itself are actually brought down to September 30 last, covering the three half-years from March, 1905, and a painful show they make. In the first six months to September, 1905, the gross revenue was £304,919, the expenditure £166,032 and the nett revenue £138,887; in the following period these were, respectively, £305,599, £166,779 and £138,820, the change in each being so insignificant as hardly to be worth mentioning. There was a slight advance in the earnings, but as the expenses were greater the profit fell away. In the six months, however, ending September 30, 1906, the change is remarkable, for gross receipts dropped to £230,552 at the same time that the expenditure jumped to £172,426. The nett revenue accordingly shrank by £74,694 to £64,126. This is what happened when the company had to rely mainly upon the normal traffic. In former years the earnings were swollen indirectly out of capital, money spent in conveying either its own construction goods or permanent way material for the Mashonaland Railway. The directors admit that the fall in the revenue and the increase in the ratio of expenditure which was 72.8 per cent. against 54.5 was due to the discontinuance of such traffic, which had passed over the lines during the previous ten months. So from these later figures one can form a tolerably just idea of how returns will look when the company relies upon the ordinary traffic coming to it from a sparsely populated region, the resources of which are still undeveloped and where the scope for increasing the goods traffic is extremely limited, especially now that so many "Chartered" hartlings have been ruined. As past losses have been hidden by this kind of business it has been impossible to discover what the exact financial position of the company was at any specified date, even

had the accounts been set out with clearness and without unnecessary complications.

An analysis of the traffic is given for the eleven months covered by the accounts, namely, from October 31, 1904, to September 30, 1905. In this period the miles open increased by 76 to 1,297, while the train miles run decreased from 746,034 to 683,336, but allowance must be made for the fact that the period is one month short of the year with which the figures are compared. Gross revenue was some £15,500 higher at £478,718 and the expenditure £59,000 less, so nett receipts advanced from £106,841 to £181,192. While 2,000 less passengers were carried 21,400 more tons of goods and minerals were conveyed, and though nearly 9,000 tons less construction material was transported over the lines the revenue from this actually rose from £66,729 to £87,639. It is acknowledged that the increase in the gross revenue was due chiefly to the carriage of material for the construction of the line from Kalomo to the Broken Hill mine, whilst the increase in revenue is attributed to the fact that almost all of it was hauled in full train loads over the 581 miles from Salisbury to the Victoria Falls, earning 38s. gross per ton against smaller quantities conveyed and 24s. per ton in the preceding year. For the year ending September 30 last the approximate figures are:—gross earnings £542,151, expenditure £339,205 and nett earnings £202,946, but the length of line increased to 1,390 miles and during half of the period construction material continued to be hauled. The drop in the passenger traffic may be due to the ing of the visit of the British Association to the allrious Victoria Falls and the excursionists it rought. The curiosity lately aroused by the much-trumpeted scheme for generating electric power at these same Falls may attract a few more tourists, and induce them to take advantage of the company's "reduced rates for combined tours by land and sea," but this will not make up for the losses it will have to show now that earnings are less swelled by capital outlays.

According to the intricate accounts presented, the annual loss is growing at a pace formidable enough. For the half-year ending April 30, 1905, it reached £100,591 and increased the deficit to £736,818. For the five months to the end of the following September the deficit was smaller, only £42,466, so the aggregate loss at that date reached £779,284. What is it now? The round million? But even this prodigious total is subject to increase by any amount which may be found to be payable to the Government of the Bechuanaland Protectorate under the contract dated 3rd of August, 1894. How much the company actually owes the Chartered Company the accounts may not clearly disclose, but in the balance-sheet, dated April 30, the indebtedness on loan and other accounts appeared at £275,544, and in the balance-sheet for the subsequent half-year it was £251,072. Cash at the latter date was only £8,840, and the balance of borrowing powers is merely £47,377. Moneys spent on capital account were not so heavy as in preceding half-years, for in the six months to April 30 the outlay was £257,763, and in the subsequent five months only £65,961, but the unexpended cash resources have now to be eked out with a very sparing hand. Meanwhile the rush to insolvency is made at express speed.

Siberian Proprietary Mines.

We have looked in vain in this first report of the directors of the Siberian Proprietary Mines for some tangible justification for a Siberian boom. This parent company claims to have earned a profit of £422,657, a huge sum, but consisting of paper only, shares taken as purchase consideration for the sale of properties to subsidiaries. Thus no dividend is paid, as the paper has not been transmogrified into solid cash. In the profit and loss account the following explanatory note appears:—"In arriving at the above profit the company's holdings in Orsk Goldfields, Limited, and Troitzk Goldfields, Limited, respectively, have been valued at par." The Orsk company was formed with a nominal capital of £600,000 in £1 shares, of which 500,000, credited with 15s. paid, were issued to the parent as consideration for the sale. All with the exception of 1,000 were disposed of to the H. O. Siberian Exploration, Limited, "on terms which resulted in the whole of the issued capital being fully paid up without recourse to the available funds of this company." Under an agreement with the same company the Siberian Proprietary acquired another property, eventually floated as the Troitzk Goldfields, also with a nominal capital of £600,000 in £1 shares. Of these, half a million shares, credited as 14s. paid, were handed over to the vendor company as the purchase price, whereupon the H. O. Siberian Exploration acquired 249,000 shares on terms precisely similar to those mentioned in the case of the Orsk Goldfields. Thus there has been much in and out business between these various concerns, and the intermediary profits have necessitated huge capitals. Other income during the period from the date of incorporation, August 8, 1905, to November 30, consisted of £726 from interest and £96 from registration fees, making a total credit of £423,479. Expenditure was only £6,382, so the nett profit was £417,097, subject to directors' commission and income-tax. This is represented by the 251,000 Orsk shares and 251,000 Troitzk shares taken in the balance-sheet at par, the remaining assets being loans against security £14,844, cash £33,755, investigation and prospecting account £5,976, and sundry debtors £173, aggregate £423,479. It is rather astonishing to learn, in face of the "profit" displayed, that the directors propose to increase the capital from £100,000 to £135,000, of which 16,000 shares are to be offered, *pro rata*, to the shareholders at a premium of £11 10s., that is, at £12 10s. apiece. The issue is guaranteed by the H. O. Siberian Exploration, for the right for a period of nine months to subscribe for 6,000 shares, or less, at £17 10s.; for a like number at £20 for 18 months, and for 7,000 shares for two years at £25. Will the price ever reach these heights? No one can tell. Many things may happen meantime; the present wild inflation may burst long before then. Other companies will be floated from time to time, and moments will not be wasted before they are offered to the public, for in a boom minutes are precious. The Proprietary has acquired, for instance, and is working on its own account, a property in the district of Atchinsk, and the hope is entertained that arrangements may be sufficiently advanced to form this into a separate company early in the new year. It possesses a right, also, to investigate for three years a large number of coal and copper properties situate in the Pavlodar district of the Province of Semipalatinsk. After obtaining a preliminary report upon the property the directors sent out an expedition some months ago thoroughly to prospect and open up the lodes on three of the copper claims, and they report that the operations are encouraging. An option has been acquired over an extensive lead and zinc concern in the Caucasus, with respect to which it is intended to make an exhaustive investigation at the earliest date. A perpetual lease on a royalty basis, terminable at the company's pleasure, has been taken over a stretch of 20 miles on the Suvunduk River, and arrangements have been made for a survey in the coming spring. In addition to these, other propositions are being examined. So before long this company may promote dozens of subsidiaries, and make colossal promoting profits, but it is to be hoped prudence will prevail, and that the directors will not be tempted to launch merely wild-cat schemes for the sake of an immediate sensational "profit."

Mashonaland Railway Company.

As usual, neither the report nor the accounts of this bantling of the Chartered Company are of much use to anyone, for we get no collated information nearer to date than September, 1905. True, the directors give the traffic figures for the year to September 30,

1900, but these are approximate only. The completest returns we get are those for 1904-05, now corrected and adjusted, so they are fifteen months behind. Gross revenue amounted to £212,787, the expenditure was £140,174, and the nett receipts came to £79,573. The approximate figures for the subsequent year show a substantial improvement all round, being £270,752, £148,782, and £121,970 respectively, while the ratio of expenditure was cut down from 65.88 per cent. to 54.95, which is all very fine and large. Compared with 1903-04 though, the business showed a decline under all the important heads, in passengers, goods, and live stock; and had it not been for a saving of £33,082 in expenses, there would have been a heavy fall in the nett revenue, instead of an increase of £18,180. This is not promising, especially as the entire traffic is still ludicrously tiny when we remember that the system sprawls over 1100 miles. But, as already stated, the year 1905-06 was better, if we can rely upon the estimates being as close as possible to the actual returns. The reductions in goods rates came into operation on October 1, 1905, and it has yet to be ascertained what the effect will be. A new line has been built from Kalomo to the Broken Hill mines; this was finished in June, and opened for public traffic on September 1 last; whilst another line, 12 miles long, to the Eldorado mine, was declared ready on July 12, and the materials, &c., for these extensions no doubt bulged out the traffic receipts. It is impossible to say whether or not any of these lines will become self-supporting; the probabilities seem rather against it, at any rate, for some time to come.

In March, 1905, a formal agreement was made with the Rhodesia Railways, providing for the working of the line from Beira to the Victoria Falls as one system. Since then it was found that some of the provisions operated unfairly to both companies, so the directors agreed that it was mutually advantageous to postpone the nuptials. The accounts presented cover the two half-years ending March 31, 1905, and September 30 of the same year, in which period, of course, the debit has considerably increased, after making the heavy provisions for nett revenue charges, &c. The total loss for the first half was £69,075, to be added to by charges for rolling stock which had not at that date been ascertained. This made the aggregate loss £340,669. In the second half there was an increase in the debenture debt of £1,788,409, out of a total of £2,560,000 issued in March, 1905, making the grand total existing at the end of September £5,050,409, allowing for £3,591 payments in arrear. Nett loss for the second portion of the year was £41,557, so the deficiency stood at £382,226 fifteen months ago. What is it now? And how many years will it take to wipe it out? The accounts have been prepared and audited, it must be remembered, on the judgment of Mr. Justice Warrington upon the construction of the working agreement between the company, the Beira Railway Company, and the Beira Junction Railway. But this judgment has since been reversed by the Court of Appeal. The directors have, however, decided to take the question to a higher tribunal, but should the Lords uphold the Court of Appeal then the accounts will have to be adjusted accordingly. It is a woeful show as it stands, but the money is all spent prodigally in the interests of Chartered "Imperialistic" dreams, and it may be well that some fools appear to be willing to stand the loss.

SINGER AND CO., LIMITED.

The annual meeting of this well-known cycle company will be held on Friday next, and we begin to wonder if the directors will be able to advance any adequate excuse for the miserable display made for the twelve months ended August 31 last. The past year has been an exceptionally good one for the cycle and motor-car industry, and it at least seems strange that a company such as this, which at one time was capitalised in such a monstrous way, should be unable to share the general prosperity. After a perusal of the report just issued, shareholders may well despair of any good ever coming out of the business again. One of the vendors who, we believe, holds the debentures, or most of them, gets anything out of the past year's profits, and year by year goes past without the preference or ordinary shareholders receiving a penny of return on their frightfully attenuated capital. When the company was formed some ten years ago it was overwhelmed with a share capital of £600,000 being a debenture debt of £200,000, but the inevitable scaling down to get rid of the promoters' booty has taken place within the last few years, and no less than £475,000 of the share capital has disappeared together with £40,000 of the debentures. Even now the goodwill of £146,749 is in excess of the share capital, meaning that the assets would not pay back even the debenture debt should anything still more serious happen, and it perhaps need hardly be said that nothing in the shape of reserves exists. We gather from the report that business in the cycle department was again progressive during the period under review, the number of machines sold having largely increased with attendant bigger profits, and the directors say that everything points to still greater sales for the present season. Unfortunately the experience in the motor department seems to have been quite the reverse and the results have not met the expectations of the directors. Shareholders, however, are cheered with the statement that since the accounts were closed a new and popular design of Singer car has been produced, for which large orders have been received. This may point to an improved profit display for the current year, but we must conclude from the directorial language that the motor operations last year really resulted in a loss. What else can we infer from the statement that "the development of the motor-car section has involved further expenditure, part of which has been added to the amount charged against this department in last year's balance-sheet." Preliminary outlay on the motor department brought forward was £8,800, but the expenditure in the past year was £10,143, making a total of £18,943. Whether this will eventually be added to the goodwill account and called establishment charges cannot be said, but it is a purely intangible item, and ought to be written off out of profits. Not only so, but additional capital of at least £20,000 must be provided for the motor business, and this the directors propose to arrange for in connection with the Singer Motor Company, which was registered in 1903 with a nominal capital of £1,000, of which 57 shares, all held by Singer and Co. or its nominees, have been issued. Other items in the balance-sheet do not need much description, but it may just be pointed out that sundry creditors amount to £16,169, while debtors reach £31,330, cash is £6,452, investments of a good class are valued at £10,595, and the stock-in-trade represents a value of £32,549. The debit to profit and loss brought forward was £4,960, and after deducting a surplus of £1,620 available from the past year's revenue the deficiency is brought down to £3,340. Said revenue reached a sum of £13,557 or about £2,000 more than last year, and after providing directors' fees £600, trustees' fees £21, depreciation £3,316 and interest on debentures £8,000 a balance of £1,620, as just mentioned, is left.

THE MOTOR 'BUS AMALGAMATION.

We fear the position of a large number of motor 'bus companies is already desperate, and if we mistake not the symptoms, their future careers will be marked either by amalgamation or liquidation. Even the former expedient can hardly save some from ultimate break-up, but a community of interests may stave off the evil day for others. We do not apply these remarks to any particular company, or even companies. Here and there an enterprise might be doing extremely well, and for all outsiders know to the contrary, the London and District Motor 'Bus Company, the Motor 'Bus Company, and the London and Provincial Motor 'Bus and Traction Company—very little originality

ingenuity is displayed in choosing titles—which it is proposed to amalgamate with the London Motor Omnibus Company (Vanguard) may be earning highly satisfactory profits. Shareholders, however, are entitled to be sceptical in the absence of even a hint concerning the achievements of these concerns. In a general way all came out of the same stable, and all are blessed with a slice of deferred capital in 1s. shares. They work together in a friendly way, or rather that was the original intention, but up to the present the idea has not been given much effect to in practice. Not only that, but the conditions of running motor 'buses in London have recently somewhat changed—*i.e.*, the police are declining to license those machines which seem likely to suddenly asphyxiate pedestrians—and the directors consider that the rights of the respective concerns will be better and more effectively assured by a combination of interests in a larger and more influential undertaking than is possible under existing circumstances. Fusion having been agreed to in principle by some of the largest shareholders, Mr. W. B. Peat, president of the Institute of Chartered Accountants, and Mr. J. S. Harwood Banner, M.P., a past president, were asked to prepare a scheme. The result of their labours is worth setting out in full. Here is the proposal:—

Name of Old Company.	Share Capital issued in Old Companies.			Debentures and Shares to be Allotted.			
				To Pref. Shareholders.	To Ordinary Shareholders.		To Def. Shareholders.
	Pref. Shares of £5 Each.	Ord. Shares of £1 Each.	Def. Shares of 1s. Each.	6 % Debs. on Deb. Stock.	7 % Non-Cum. Pref. Shares.	Ord. Shares.	Ord. Shares.
	£	£	£	£	£	£	£
Lon. Motor 'Bus ..	200,000	100,000	60,000	200,000	145,000	59,500	90,000
London and District Motor 'Bus	—	70,000	100,000	—	70,000	17,500	21,000
Motor 'Bus	—	150,000	100,000	—	150,000	37,500	45,000
London and Provincial Motor 'Bus	—	100,000	100,000	—	100,000	25,000	30,000
	200,000	420,000	360,000	200,000	465,000	139,500	186,000

Just note, first of all, that the scheme involves an increase in capital of no less than £352,500, partly because holders of 360,000 deferred shares of 1s. each, mere promoters' profit, are to be given £186,000 in ordinary shares. Surely independent shareholders of the London Motor Omnibus Company are not going to permit this thing to be thrust upon them without a full and complete statement of the present position and profits, if any, of the other companies. Why is all necessary information withheld? The preference shareholders of the Vanguard Company may be all right, because they get debentures in exchange, but why should the ordinary proprietors be asked to share their position with the deferred holders, who quite likely will never get a penny of dividend, and will not be hardly done by if they do not? Nothing really substantial is ever given in exchange for these deferred shares. The thing stands self-condemned, and we doubt if further space should be devoted to it. It should, however, be useful in the future to have on record the fact that the authorised share capital of the new company is to be £1,000,000, in equal amounts of 7 per cent. non-cumulative—a point worth noting—preference shares and ordinary shares of £1 each, besides £250,000 6 per cent. debentures. The first issue will be £200,000 in debentures and £790,500 in shares, 465,000 being preference and 325,500 ordinary. London Motor Omnibus ordinary shareholders are to receive for each £1, 29s. in new preference shares and about 12s. in new ordinary shares, while for each £1 of ordinary capital in the other companies will be exchanged the same amount of new preference capital and 5s. in new ordinary shares. The great difference in the treatment of the London Motor Omnibus and the other companies' shareholders itself rouses suspicion, and it should be borne in mind that under the plan the first year's working of the smaller companies will be buried in oblivion.

Sir Felix Schuster's Suggestions.

The paper read by the Governor of the Union of London and Smiths Bank before members of the Institute of Bankers on Wednesday last was a statesmanlike production. No fanciful schemes were formulated; all was prudent, and except on the matter of increasing the bank-note circulation in times of stress we find nothing which is not pertinent to the dominant banking question of the hour. We therefore trust that some practicable result will follow Sir Felix Schuster's pronouncement. Our banking machinery is admirable from some points of view, but from others it looks muddled, haphazard, and whatever precautions can be taken with a view to strengthening bank reserves would be something gained in stability, a check applied to the invariable tendency of dealers in credit to extend their facilities until they consume instead of create capital. Sir Samuel Montagu was of opinion that an issue of £10,000,000 in £1 or £2 notes, called Treasury notes, or bank-notes, should be made under the management of the Bank of England or the Mint, and that £10,000,000 of gold should be bought by means of these notes and stored at the Bank of England as gold reserves of the Government, only to be used in great emergencies. We do not want the Government to intervene further in banking affairs and consider that our cheque circulation alone requires a much larger gold reserve kept perfectly clear of ear-marking against notes or other entanglements, available at all times. This said, we reprint here the summary of Sir Felix's proposals, which are surely attainable with goodwill and harmony in the banking community. Especially noteworthy is his proposal that the Government Savings Banks ought to contribute proportionately with the other banks to the additional gold reserve. That suggestion opens up a long vista of perplexing questions, and the more we study the operation of State savings banks the less enamoured are we of that method of accumulating capital kept idle or utilised merely to further Government extravagance, if utilised at all. We should be inclined also to go a little further than Sir Felix, and really do not see any insuperable obstacle to the accumulation of a bullion reserve equal to 5 per cent. of bank liabilities on deposits. It is pleasant to see that the bankers appear to be coming into line in supporting the proposed reform in the weekly account of the Bank of England. We have for many years held that it should be asked to separate bankers' balances from its "other" or private deposits, so that the Money market might have a weekly indication of the resources of the banks held in the custody of the bankers' bank. Possibly the Bank of England may object to this separation as tending to reveal the comparative smallness of its private business, but there can be no insuperable objection to a step of the kind, because everybody knows that the Bank does not lay itself out to compete for small customers against the other joint-stock banks. If this change were made, and if all joint-stock banks were obliged to make up their monthly exhibits on the same day, a great step would be taken towards ensuring conservatism in the conduct of banking business. About averages, weekly or monthly, we are not so sure.

1. The monthly publication of averages by all the banks.

2. The publication by the Bank of England of the bankers' balances in the aggregate, but separately from its other liabilities, either weekly or monthly, as may be decided upon; if monthly averages only, then an annual return also.

3. The formation of a second reserve on the following lines:—

(*a*) Each bank to contribute a certain percentage of its liabilities on current account repayable on demand, according to its average figures for the preceding year. He did not think it would be excessive to ask each bank to contribute gradually, and by slow degrees, an amount equivalent to about 2 per cent., or, say, 1 per cent. of the total liabilities on current and deposit account.

(*b*) The Government Savings Banks, whose liabilities are, if not technically on demand, practically so, to contribute an equal proportion, which would amount to £4,000,000. This would be only a very small contribution, considering that banks keep about 15 per cent. or more in reserve against such liabilities.

(*c*) A small permanent committee, to be formed of representatives of the bankers, to act with the Bank of England; without

the committee's sanction the special reserve should never be used, and such sanction should be given only under circumstances of exceptional emergency. Such a committee would form a nucleus of a general consultative committee with the Bank of England, the want of which has been long felt.

(*d*) The Bank of England to be given the power of increasing its note isue against securities, after the Bank rate has reached a certain level, to an extent equivalent to a given proportion of the special gold reserve, say, ¼ or ⅓, and subject to certain stipulations and the payment of duty to the Government, the power not to be used unless a very high rate of interest had been attained, and only to meet an internal demand; against an external drain of gold this provision would be no safeguard, but it would give the Bank additional power of meeting pressure for accommodation under special circumstances. The action should not be automatic, but open to the discretion of the directors.

National Bank of Scotland, Limited.

In several respects the report of this large Scotch bank for the year ended November 1 last suggests conditions similar to those exhibited by the Commercial Bank whose balance-sheet was discussed in these columns last week. Profits are again down, but only by £1,104 to £220,090. This, however, makes a reduction of £10,146 in two years, but the directors still pay an "ordinary" dividend of 15 per cent. and a bonus of 5 per cent., making 20 per cent. for the year. This takes £200,000. Then £5,000 is set aside in reduction of the cost of real estate, an amount which does not prevent the total owned property in Scotland and London from figuring for £22,000 more at £552,000. A further £5,000 is set aside to officers' pension fund as against £10,000 in the previous year, and £20,000 is placed to "investment account" as against nothing. Altogether the writings off this year amount to £30,000 against £20,000 in the previous year, but the increase was clearly not provided by profits, and we find the balance of £39,752 brought in reduced to £29,842 carried out, a reduction of £9,911. Coming to the balance-sheet, there are several suggestive changes to be noted. Capital and reserve both stand as before, the reserve of £1,030,000 being £30,000 more than the paid-up capital, but the note circulation has gone down by £23,000 to about £869,000. Deposits, however, have risen £719,000 to £14,853,000, against a reduction a year back of £929,000. Acceptances, on the other hand, have fallen off about £60,000 to £650,000. These changes do not indicate much, but when we come to the assets there are one or two notable movements. Gold and silver coin, notes of other banks and cash with the Bank of England and other London bankers is about £26,000 down at £1,370,000, and we should really like to know how much of this conglomerate is in sovereigns, but no Scotch bank will reveal that secret until compelled. There is further a decrease of £39,280 in British Government securities (Consols therein taken at 85), but the entry "loans at call and short notice in London, cheques on other banks, on hand, or *in transitu*"—another unsatisfactory mixture—shows an advance of £959,000 in round figures at £3,229,000, and that is not pleasant to see. There was a slight advance also in the previous year, so that in two years £1,078,000 appears to have been added to the amount of this bank's Scotch money afloat on the London market. Loans on railway stocks and other securities for short periods—contango money, in other words—is an item, however, which has fallen off £193,000 to £2,855,000, but it is still formidable enough. This is against an increase of £52,000 a year ago, and the change so far as it goes is in the right direction. Bills discounted are down about £122,000, against an increase of £152,000 shown in the preceding year to £1,911,000, while "advances on cash credit and current accounts" have risen by £247,000 to £5,071,000, as against a decline of £740,000 in the previous year, and there is a decrease of £109,000 in the investments described as "Bank of England, Metropolitan Board of Works, the bank's own stock (£2,925 at par) and other stocks and investments," the total being now £2,094,000 as against £2,203,000 or thereby. What these minor changes portend it is impossible to say without knowing more about the business of the bank, but it is not comforting to see so much money floating about on the London market, and the heavy increase in the amount on call and short notice requires looking to. So do the Stock Exchange advances. Have they led to bad debts and locks up? Is the bank losing money by the realisation of securities and is it compelled to sell some things in order to feed a market now profoundly distressed by a long continued and dangerous abuse of credit facilities? Or is it forcing its clients to sell? What is its holding in Consols and other British Government stocks?

Is This a Practicable Suggestion?—No. 4.

Appended are some other notes on the extension of advice question. Several letters received are too long to print, but will be answered privately. What we have decided upon will be set forth in detail next week:—

SIRS,—Judging from the correspondence in recent issues of the INVESTORS' REVIEW, there appear to be two very different wants amongst the writers which will be rather difficult to reconcile in the way proposed in the article, "Is this a practical suggestion?" Some desire you to take full charge of their investments, and fully recognise that honest and trustworthy advice such as they require is expensive. Others, however, would be satisfied with a more definite indication of your opinion on the various companies whose reports and balance-sheets are dealt with; in other words, although you unflinchingly expose reckless finance and warn your readers against the more notorious offenders, your general attitude towards the average company is that of a judge summing up evidence for or against a certain standard of excellence, the readers occupying the position of jury, whereas in the "Answers to Correspondents" you act the part of foreman of the jury delivering a verdict which may be immediately acted upon.

Personally, I should be sorry if that attitude were changed, and should have thought your system of investment queries sufficient for the requirements of the first-mentioned class, if followed up by letters of advice from you as to when to sell or buy, or containing information of importance peculiar to certain stocks or shares. Those desiring such information could deposit a certain amount with you from which the expenses of obtaining the information and forwarding the letters could be deducted. Your warnings, however, though most necessary to the smaller investors, would, as "Anon" points out, be quite beyond their reach. Taking the more usual amounts provided for by your trusts, viz., about £2,000 with incomes of £70 up to £110, you will readily see that £5 or £10 per annum would constitute a rather stiff rate of insurance, and though on paper the realisation of some of the securities would yield more than that amount as profit, yet the cost of reinvestment—stamps, brokers' fees, jobbers' differences—would reduce it considerably.

As regards the second class, the information now supplied might be better applied by your readers if, in the half-yearly index, different types could be adopted to represent different classes of securities as sound investments, fair investments, speculative investments, speculations (as the Cosmopolitan Mine, or some of Taylor's gold mines in the first stage), and gambling counters pure and simple, with some mark or letter to denote condition as improving, declining, or standing still. There is little doubt but that many of the gamblers in shares think they are taking the "long view" as well as yourselves. But their "long view" is of certain possibilities only, utterly ignoring other possibilities, as that a vein of quartz may contain payable gold, though it may not, whilst your "long view" is rather of the probabilities. It would, of course, be necessary to show to which issue of the company the type referred. For instance, some time ago you recommended Cuban issues; the Cuban Central Railway preference shares might then be considered a promising speculative investment, the ordinary shares being a promising speculation. Afterwards the payment of a dividend on the ordinary shares might seem to warrant their being considered as a good speculative investment, yet the events of the present year show that these shares still remain in the speculative stage only, not having really entered the realm of investments. As this result is due to extraneous causes, and not to financial mismanagement, the adoption of some system as above indicated would enable the subscribers to read your comments from your own point of view—not from an imaginary standpoint of their own, and thus possibly reduce misunderstanding of your remarks.

Kindly note my appreciation of the present method of showing the "Week's Price Movements," which, in my opinion, is so far as investors are concerned much superior to that previously in use. But in the case of dividend paying stocks, there is a gradual increase in value due to the accumulation of dividend, and then a fall of 2 or 3 points when quoted ex-div. It might be an additional advantage if these natural fluctuations could be eliminated or indicated, say, by the fall or rise being enclosed within brackets.

In one of your "Answers to Correspondents" a week or two ago you remarked that he could hardly expect you "to foresee a falling off in the value of the ore in the mines Nos. 1 and 2 and the failure to pay dividends in No. 3." Doubtless many of your readers do consider the columns devoted to "Mining News and Notes" as dealt with by a mining expert, like Mr.

Curle, of the *Economist*, though for some considerable time now I have regarded them rather as looking upon the financial aspect of the mines and the character of the persons connected with them. Having tried to work out a few problems of ore reserves from the development particulars supplied by directors to shareholders, I feel that it would require a considerable staff and much expenditure of money to arrive at conclusions in respect of all the mines commented upon in those columns.

I hope my remarks will not be considered as mere carping criticism. They are prompted by the evident desire you manifest to increase the usefulness of the Investors' Review, and the hope that its honest and valuable advice may be rendered as free from misapprehension as possible. It is so true that the eyes see only according to the knowledge of the owner that you doubtless know how often the individual bestows blame on others for results for which he alone is really responsible. Kindly excuse long letter on account of the motives.

Yours respectfully,

John H. A.

Sirs,—I am favourably disposed towards the suggested new departure as outlined in last two issues of Review. The correspondent who first suggested the scheme goes on the lines I named to you years ago, but which you could not then entertain.

I now think it would be better to have two departments—one for those who simply require an oversight of investments already made, and another for those with continual supplies of fresh money to invest, and who are on the lookout for bargains. Many, of course, require both, and could subscribe to both the departments.

Wishing you continued prosperity,

"Nopir."

Dear Sirs,—With reference to your note in No. 465, page 672, of The Investors' Review, regarding a suggestion of a subscriber to inaugurate a more active scheme of advising your clients, I would suggest the following ideas, which I hope may be of some practical use:—

I do not believe that the "trusts" you proposed for investvestments in certain classes of securities were of much practical value, as the result of the dividends-calculation is, under circumstances (and was in fact, sometimes) greatly modified by the up and down of the quotations, so that say, after a year, the actual balance of such an investment trust is surely not the one provided.

I think it would be very useful, if you could not only answer questions of your subscribers, as you do now, but, on application, first give advice and then watch, say, for a year's time, single shares or other securities. For instance, I would propose to you five or ten securities, you would give me your opinion about each one of them, and then I would ask you to watch that and that and that share for one year. I would pay a fee of 10s. or £1 for each security a year, and would renew this subscription for every following year. Instead of writing private letters you could easily issue a circular, to be sent together with The Investors' Review, in which you give your notes to all your clients, and substitute the name initials and a figure (say A.T.P. 15, A.T.P. 16, &c.) for the name of the securities. Apart from this circular, of course, proposals of favourable investments are always very valuable to your clients, but these would have to be sent by private letters only, on special application, according to the conditions mentioned on the first page of The Investors' Review.

As a very faithful friend of your Journal,

I am, yours truly,

Axel Preyer.

December 12, 1906.

American Business Notes.

By reducing their loans last week $17,000,000, the Associated Banks also brought their liabilities on deposits down $15,120,000. Even so, they were not able to wipe out the heavy deficiency in the legal reserve shown a week back. Then the shortage was upwards of $5,000,000, but at the end of last week it was down to $1,699,000, against a surplus of $3,961,000 in the same week of last year. That is not much help, and, as money continues to range between 10 and 40 per cent., we cannot see how the position is to be improved. All the currency or credit released at the beginning of the year by dividend payments will be but as a drop in the ocean to a market into which fresh demands for capital and for the means to sustain the diseased speculation are pouring every day. The latest detailed return of these Associated Banks for which we have figures is dated December 8, and it shows that 25 banks out of 54 were then in their reserves below the legal minimum of 25 per cent. of the liabilities on deposits. Among the banks thus betraying more or less distress was the City National, the biggest of them all, and the leading bank of the Standard Oil group. That seems to us to be an ominous fact.

Not less so is the capital demands of the various railways. We mentioned last week that the Northern Pacific was coming for $100,000,000. That was the first news, but the statement now is that only $95,000,000 will be issued at par to the present holders to the extent of 60 per cent. of their holdings. And now the long heralded stock issues of the Chicago, Milwaukee, and St. Paul Railroad are announced. They amount to $66,327,000 in preferred stock and $33,184,000 in common stock, all to be allotted at par to existing shareholders, the preferred subscribing up to 50 per cent. and the common to 25 per cent. of present holdings. This method of issuing capital may ensure subscriptions, because of the heavy bonuses granted with the price, but it is all the same a shamefully dishonest abuse of privilege, and betrays a perfectly immoral disregard of the true interests of the corporations thus battened on. Leaving that aside, the outstanding fact is that within little more than a week demands have been made upon the resources of the New York market by three of the over-mastering railway corporations for an amount of new capital nothing short of £51,000,000. How can any market stand up against requirements of this description? It is bound to collapse, gold or no gold, crops or no crops, combines or no combines. No imaginable emission of paper money can save it. So urgent is the Milwaukee Company's need of cash that $10,000,000 has to be paid in on the new stocks on the 31st inst. The New York Central, though, is to anticipate its January interest payments by a like amount, so that's all right.

Until the votes are counted we cannot be certain that the men in possession of the New York and Mutual Life of the United States insurance companies have triumphed; but we never for a moment believed that they meant to be defeated. According to Reuter, the votes sent in number about 800,000, of which 500,000 are credited to the New York Life Company, that being the concern which has most systematically cultivated the small insurant. How many of these votes are cast for the policyholders' committee is not yet known. Its legal adviser, Mr. Untermeyer, thinks that his party will win by comparatively small majorities, but we do not believe that, knowing, as we do, something of the methods by which votes have been obtained to support the financiers who have grabbed the management of the property belonging to the victimised policyholders. And even if victory were temporarily to be secured by the policyholders, they could not hope to retain their position against powerful interests in New York for more than a year. Therefore we hold that people abroad, in this country and everywhere else, should refuse henceforth to take out policies in these alien offices, over whose management they can never secure any effectual control. Much better stick to home offices, even second-rate ones, than go so far afield to be stripped. The existing policyholders in these alien companies should hold on, because it is not to the interest of the men who sway the millions gathered up from premium payers to injure their prospects. The profits accruing on these policies will never be as great as the delusive promises made by agents held out, but there should be no loss on the principal amount insured.

A Bill has been introduced in the United States Senate designed to liberate the funds of the Treasury so that they may be available for the wants of the Money market. It proposes that Customs receipts, as well as the proceeds of the internal taxation, may be deposited with the national banks, these banks paying a tax on or interest for the money, and it also authorises the Secretary of the Treasury to transfer public money from the Treasury to the banks apparently at discretion. Mr. Shaw, it is added, like some of his predecessors has sometimes done this without legal sanction, but now the irregularity is to be made legal should this law pass. It appears to be a step in

the right direction, because whatever the recklessness of American speculators and their banks, it is unquestionably true that the accumulation of money in the Government Treasury is often so great as to cause serious inconvenience to legitimate users of credit.

Passing Events.

The victory of the Beira Railway debenture holders' committee in the Court of Appeal last month was followed by a renewed effort on the part of the committee to get this unsatisfactory dispute settled amicably. Unfortunately, however, the Chartered Company is determined to do nothing of the kind, and the seventh interim report of the committee states that a writ has been served in a new action commenced by the Mashonaland Company against the Beira Company and the committee asking for the ratification of the working agreement. Why this action should have been taken, in view of the committee's suggestion that it should be allowed to co-operate with the Beira directors in negotiating a fresh working agreement with the Mashonaland Company, is far from clear. At the same time, it is not in the least surprising. The autocrats of the Chartered Company have throughout shown their disregard of all interests but their own, and, having failed to force their will upon the debenture holders, are prepared to spend on lawyers the money which should have gone towards paying interest obligations. As this litigation is forced on the committee, a call is made of the balance of the contributions promised, and supporters who have not yet contributed are appealed to for subscriptions to the extent of 10s. per cent. on the first debentures and 5s. per cent. on the seconds.

Mr. J. B. Robinson has sent to the Press a lengthy reply to the correspondence published by the Witwatersrand Native Labour Association, of which we gave the purport last week. Instead of throwing dust in the eyes of the public, as was evidently designed, the correspondence made clearer the disadvantages the industry suffers from granting to a monopoly the sole right to recruit for natives. Mr. Robinson reminds us — what any intelligent and unbiassed observer could see for himself—that when politics became an important factor the recruiting of natives in Portuguese East Africa fell off to an alarming extent, especially when the Liberals threatened to repatriate the Chinese, but when the Ordinance was passed by the late Government the supply bounded up in a phenomenal manner. The Robinson group had to contend against the disadvantage that certain favoured groups were receiving preferential treatment in the allotment of natives, and this is no secret to the impartial-minded. "Under these circumstances, I may fairly ask: Is it right that a monopoly which has exercised in the past such a prejudicial effect should be allowed to continue?" It is not right, but there are some people who will support any wrong, no matter how they personally suffer, if they imagine they can gain something by gambling. "I feel convinced," says Mr. Robinson, "that, by allowing others to recruit native labour for the mines, a healthy competition will be created, and, at the same time, a good impression will be made upon the minds of the natives themselves, who would be disposed to seek work at the mines when they found the labour market was free." What effective answer can be given to this?

For many a year past the directors of Jungle companies have been bewailing the high rates charged by the Gold Coast railways, and have argued that if only these could be reduced it would make a wonderful difference to the industry, for it might enable many mines working at a loss, or just making ends meet, to earn profits. Personally, we never felt hopeful that such reduction would make much difference to the prospects of the larger number of the mines, simply because we cannot believe that the ore exists in what is called permanent quantities, but only in patches, poor for the most part. However, at the annual meeting of the Ashanti Goldfields Corporation, the chairman was able to announce the receipt of mail advices giving particulars of a revision of rates on the part of the Gold Coast railways. The *Financial Times* says it has seen a copy of this document, and it sets forth in the following table the scale of charges formerly in force in contrast with those now ruling:—

Old Rates. Per Ton per Mile.	s.	d.	New Rates
Class 1.			
1 mile to 50 miles	2	6	Dynamite, gelatine, &c., formerly under Class 1, now Class 2.
51 miles to 100 miles	2	3	
101 miles to 150 miles	2	0	
Class 2.			
1 mile to 50 miles	2	0	Cyandide machinery, plant and steam fittings, formerly under Class 2, now Class 3.
51 miles to 100 miles	1	8	
101 miles to 150 miles	1	3	
Class 3.			
1 mile to 50 miles	1	3	Bricks, fire bricks, fire clay, lime, rails and permanent way, formerly under Class 3, now Class 4.
51 miles to 100 miles	1	0	
101 miles to 150 miles	0	9	
Class 4.			
1 mile to 50 miles	0	7½	
51 miles to 100 miles	0	6	
101 miles to 150 miles	0	6	

Thus a reduction has been effected by a change in the classification of the goods, and probably that will enable the companies to make appreciable savings in various directions. It now remains to be seen what the "happy" effects will be.

A propos of the keen hunger for gold throughout the world, especially in the civilised world, and the present grave monetary position which is the outcome of it, a recent communication from the Sydney correspondent of *The Tribune* is interesting. The year's exports of gold from Australia, he says, have been a prominent feature of the year's trade. The fact that the Commonwealth will probably export £17,000,000 in gold during the current year without depleting Australian gold stocks should exert a healthy influence on Australian finance as viewed from a British capitalist's standpoint. "It has been argued that we are shipping too much gold, as an increase of £25,000,000 in the year's exports should alone more than redeem our obligations at the Antipodes. As the Commonwealth will produce £15,000,000 worth of gold, however, and add £2,000,000 to her specie stock by gold imports, stocks will be ample for the requirements of the Australian banking and trading community. If, therefore, we have sent, or shall send, £10,000,000 more to London than the circumstances seemed to have warranted, the movement has been fully justified. The current 6 per cent. London bank rate has been largely responsible for the heavy deportation of Australian gold, which during the past nine months has been £6,811,133 larger than at a corresponding period last year." The mention of all these millions of gold in times like the present should raise the hopes of the famished under ordinary circumstances. But circumstances are not ordinary, unfortunately, and these millions are as unsatisfying as crumbs to the desperately starving.

We have received from Mr. W. E. Wimpenny, of Huddersfield, a clever adaptation of the "slide rule" for the use of stockbrokers and all others interested in calculating the yield from investments. Results are shown in pounds, shillings, and pence, so the veriest tyro can manipulate the rule. On the reverse side the rule is arranged to show the amounts that must be set aside to replace capital lost by redemption, or, if purchase price is below redemption, the amount that will accrue each year. This latter is, however, not of much interest to the ordinary investor, as he is, of course, unable to anticipate in his income any increase that may accrue at some future date. Other calculations can be made, and altogether this neat, compact rule, or sliding calculator, should be useful, and do away with the necessity of having a number of tables at hand to work by.

No subject is of greater importance to us as the leading commercial nation of the world than that stated in the present Lord Chancellor's letter to the *Times*, published on October 14, 1905. It is the question of the position of merchant ships in time of war. As

Lord Loreburn, better known as Sir Robert Reid, then pointed out, it would be the easiest thing possible for an enemy possessed of a few gunboats and cruisers to disorganise our whole foreign trade in time of war. The mere dread of capture by the enemy would impel merchants everywhere to transfer their cargoes to ships sailing under foreign flags. Mr. F. W. Hirst has therefore done well to reprint this letter, and to write an interesting and valuable preface thereto. The pamphlet has been issued by Messrs. Macmillan and Company at the price of 1s., and ought to be studied by M.P.'s and all others interested in the welfare of mankind, let alone that of the people of the United Kingdom. As Mr. Hirst points out, the policy of destroying your enemy by destroying his commerce has long lost its efficacy, and the mere fact which he emphasises, that our marine insurance companies are interested in the mercantile navies of the entire world, ought to stimulate our politicians to bring about agreement among the nations that all property not contraband should be left untouched during hostilities. What contraband is may still be an unsettled question, but the subject ought to be taken in hand at the next Hague Conference, and a thoroughly humane set of rules drawn up. We are quite sure that civilisation has progressed sufficiently to cause every country solicitous for its own safety to be ready to fall in with whatever the Conference may agree upon. We of all countries ought to be zealous in removing the obstacles to harmony.

Japanese trade continues to grow and to settle down to its natural lines of expansion. The returns for October, for example, show that the exports exceeded imports in value by about £1,870,000, but for the ten months there is still an excess of nearly £2,000,000 in the value of imports over exports. The figures for the longer period, however, are still affected by the aftermath of war, and we are quite sure that as the months slip past the exports of Japan will continue to outweigh the imports. We might not consider this a profitable state of affairs for Japan if it were too prolonged, and if the excess grew to be formidable, but in her present circumstances, with so much of her debt held abroad, it is the healthiest thing that could happen. A noticeable fact in connection with the figures is the rapid expansion of Japanese shipping, and the decline in the shipping of other nations, but here again the figures are blurred altogether by the necessities of the war, and we can only be sure of one point—that Japanese shipping is making rapid strides. Another point is the remarkable reduction in the excess of exports of gold over imports. In the first ten months of the current year ended October 31, the excess of imports, mostly of gold, but also of silver, amounted to £2,545,000, whereas in October last the excess of exports came to about £276,000. It is quite possible that Japan may continue to lose her precious metals, although with the enormous balances of the Government held abroad, there should be no embarrassing drain.

The circular to shareholders in the International Bank of London, inviting them to subscribe, *pro rata*, a sum of £5,000 to be devoted to the prosecution of the directors is distressing reading. It is signed by Sir Raymond West, Messrs. C. E. Keyser, F. Hue Williams, and Alfred S. Marks, and among other things it tells us that of the total loss of £400,000, the whole of the shareholders' capital, about £150,000 is due to bad debts which had been taken into the balance-sheet at a fictitious value. Another £200,000 was money lost in connection with the North German Pitwood Company. The committee also says that in the four years ending with 1903 dividends were paid out of capital, and the opinion is expressed that £60,000, the amount of these dividends, could be recovered from the directors. Complaint is also made about the attitude taken up by the bankers, Messrs. Glynn, Mills, Currie and Co., who are not creditors in the ordinary sense, they having, moved apparently by a public-spirited deside to avert disaster, undertaken to finance the bank at a critical moment. They did this, however, under a guarantee of £275,000, and the committee contends that the bankers have no right to stand between the shareholders and justice. We hope the money will be subscribed, although it is more than ever our opinion that the business of getting to the bottom of this disgusting episode in City finance is the affair of the Public Prosecutor.

An official intimation has been sent round to the Press stating that a provisional agreement has been entered into by the Victoria Falls Power Company to buy the property of the Rand Central Electric Works, Limited. Everything is more or less "provisional" with this Victoria Falls project, but it may be interesting to state that the price to be provisionally paid is to be fixed at £350,000, half in preference shares and half in debentures, a mode of payment which must be agreeable to the Victoria Falls Company, seeing that the public has not come forward to give it any money. Apparently, too, the Rand Central Electric Company retains its cash assets amounting to about £130,000. As its total capital is only £300,000, the price would be high if it were a real one, particularly as the capacity of the existing plant is stated to be only about 4,000 horse-power. But why a profitable business of that kind should be handed over to a monster of capital inflation like the Victoria Falls Company is more than we can understand, unless the object be to bind the mines down by yet one more deadly monopoly and to demonstrate the fervour of "Chartered" Imperialism and "loyalty" by providing a fat job for the German electric company.

Some circulars have reached us, issued by Mr. A. L. Normandy of Sydenham, relating to the proposed new articles of association for Ind, Coope and Co. We have had no communication with Mr. Normandy, but the mere persual of these circulars drives us to the conclusion that he and his fellow-shareholders appear to have a very real grievance against the present management. There may be some explanation of the extraordinary stipulations he describes, and possibly he does not tell all the story, but, as it stands, we are amazed that any body of shareholders should tamely submit, or should be if we had not become hardened to exhibitions of the kind. Mr. Normandy says that the new articles of association lately registered empower the directors to make three of their number directors for life, to give a pension of £1,000 per annum for ten years from January, 1902, and afterwards of £500 for life to Mr. Murray Ind, now chairman of the board, to raise the directors' fees by £1,500 per annum to £4,500, to create more managing directors and other officials and to pension them. Mr. Murray Ind will apparently enjoy his fees as a director in addition to the pension, and his colleagues, Messrs. C. W. Matthews and A. W. Ruggles-Brise, are to be made directors for life. If this is so, we sympathise with Mr. Normandy, and trust that his fellow "A" and "B" preference shareholders will respond to his appeal for a little money to enable him to test the validity of these new articles.

The Channel Tunnel project would appear to be at last fairly launched, and we are very glad to hear it. At a time when it was fashionable to decry the enterprise we stood up for it, and have always believed that the execution of such a work, even if not directly remunerative, would have a most beneficial influence upon the amity now existing between England and France, let alone between us and other Continental nations. In saying this we are not speaking in any hostility to the Tunnel Ferry project, because we believe there is ample room for both, and shall hope to live to see both in full working order. According to a communication received, the Channel Tunnel Bill before Parliament will seek powers to execute preliminary works up to the three-mile limit. Then a new company is to be registered hereafter for the purpose of carrying the entire work to completion in conjunction with the Compagnie du Chemin de Fer Sous-Marin entre la France et l'Angleterre and the Compagnie du Chemin de Fer du Nord. It is estimated that the entire scheme will cost £16,000,000, and that is

probably a moderate figure, as two tunnels are to be constructed side by side, 30 miles in length, 24 of which will be under the sea. Statistics are offered to illustrate the expectations of traffic, but we need not go into these now. All we have to do is to give the project a hearty welcome. Half the capital is to be found in France.

Five Indian tea companies issue an interim report at this time of year giving the results for the past season, and all are so far favourable that they show substantial increases over the 1905 season. The Jhanzie Tea Association tops the list with an advance of 395,708 lbs. at 1,326,800 lbs., and it is satisfactory to note that this gain has not been obtained at the expense of quality, as the sale price for 612,518 lbs. to November 30 was 9.23d. against 368,601 lbs. sold for 9.58d. at the corresponding date last year. All three estates of the Majuli Company produced more, with the result that the total crop amounted to 1,527,000 lbs., or an increase of 150,400 lbs., of which 897,368 lbs. have been sold at 8.56d., compared with 785,276 lbs. at 9d. The Moabund Company gathered an additional 84,432 lbs. at 1,729,600 lbs., and sold 1,072,762 lbs. at 9.30d., against 927,846 lbs. at 9.01d., while the Attaree Khat produced 31,191 lbs. more at 1,055,000 lbs., and disposed of 513,079 lbs. at 9.30d. against 441,548 lbs. at 9.50d.; and the Borelli Company, with an increase of 54,929 lbs. to 875,000 lbs. in the output, has sold 537,593 lbs. or 66,812 lbs. at a slight advance to 8.24d. per lb.

The general secretaries in Europe of the Rio de Janeiro Tramway, Light and Power Company have issued a circular giving the latest official statement of the progress made. From this shareholders learn that all the construction works both within the city of Rio and at the great water power station at Rio dos Lagos are proceeding rapidly and most satisfactorily, and that one set of transmission lines is completed from Rio dos Lagos to the power station in the outskirts of the city. The company expects to commence regular commercial distribution of current generated by water power about March 15, when it will operate all the city lighting, public and private, and such of the tramways as are electrically equipped by that date. In the meantime, the earnings are steadily increasing, the gross and nett earnings for October amounting respectively to $508,330 and $156,660 gold compared with $477,330 and $132,000 for the previous month, and it is estimated that for the complete year ending December 31 the gross revenue will be £1,200,000, and the nett £311,000. The rearrangement of the various franchises relating to the lighting and tramways, and all outstanding questions between the Government and the Corporation of Rio de Janeiro and the company have been satisfactorily settled, the right of entry for the transmission lines into the city having been confirmed and the company granted expropriation rights.

The most astonishing dividend so far declared by Rand companies is the final one of 50 per cent.—inclusive of a bonus of 25 per cent.—by the New Primrose, of the Barnato group. This compares with 20 per cent. paid in December of last year, and makes 70 per cent. for the year, or exactly twice that paid in 1905. It is a remarkable performance at a time when some companies are reducing their dividends, when many mines are being closed down, when all the bosses are weeping over the scarcity of black labour, and when the outlook, from their standpoint, is hopelessly dark. It is far and away the highest dividend ever paid by the New Primrose, and on the present price of the shares the yield is about 21½ per cent. Unfortunately, the mine has not a long life; it will probably be exhausted in six or seven years, and even should the 70 per cent. be maintained for that period the share is fully priced. But will it be kept up? We doubt the possibility of it. And the directors seem to doubt it by making 25 per cent. of it a bonus, implying the possibility that they may not be able to repeat it. But for many days before the dividend was declared the price of New Primrose shares kept mounting up when other shares were falling, on expectations, we were told, of higher dividends. So the market gamblers had unerring prevision of coming events. How did they acquire this pre-knowledge? Can the directors tell us?

According to the usual monthly table compiled by the *Australian Trading World*, there was a general upward tendency in the market values of Australasian mines during November. On December 10 the aggregate value of 34 representative mines was £34,230,254, and this compared with £33,656,129 on November 10, a nett appreciation of £574,125. Whilst 12 mines decreased in value in the four weeks to the extent of £725,187, 18 improved as much as £1,299,312. The following table gives the figures for the past six months:—

	£
Capital at market value June 12	32,932,186
,, ,, July 10	30,775,438
,, ,, August 11	32,353,975
,, ,, September 11 ..	33,604,812
,, ,, October 9	33,671,561
,, ,, November 10 ..	33,656,129
,, ,, December 10 ..	34,230,254

During the month Broken Hill Proprietary appreciated £420,000, Waihis £218,750, Kalgurlis £160,000, Broken Hill South Blocks £68,750, and Mount Morgan £62,500. Against these the largest losses were British Broken Hill £165,000, Oroya-Brownhill £196,875, Mount Lyell £132,500, and Mount Boppy £76,375.

A share that has suddenly emerged from obscurity in the past week or two, and has risen rapidly, is the South-West Africa. But it must not be confused with Transvaal gold mining companies, for it has nothing whatever in common with them. We believe the shares are held predominantly in Germany, and that the speculation comes almost exclusively from that quarter, which is probably not the highest recommendation. Allied with this company is the Otavi Company, in which the South-West Africa Company holds a 55 per cent. interest, and rumour has it that the Tsumeb Copper Mine, belonging to the Otavi, is opening up well. Has this report any direct connection with the rise in the price of copper and the boomlet in copper shares? It looks like it. If not, it is a remarkable coincidence. Any way, we hear that Otavi shares are shortly to be "introduced" on the market, a joy in store for us all. Who will introduce them? For most of them are tied up, and this is why, say the speculators, South-West Africa shares are extensively bought. The public at large know very little either about the South-West Africa or the Otavi shares, so they are obviously not the buyers. Another report says the A. Goerz group has acquired a large interest in the company, including the control of the bulk of the shares in the hands of the principal owners. Surely they are not the prime manipulators?

So rich is the Allgemeine Electricitäts-Gesellschaft that it might carry out the enterprise of monopoly in power supply to the Witwatersrand mines "off its own bat." Its balance-sheet of June 30 last seems to be the strongest thing of the kind we ever saw. Not only are its property and patents written down to nothing, but its balances with bankers amounted at that date to £1,714,000, and its stock in hand to £2,341,000. It also possessed over £517,000 in the shape of interests in other companies, and the capital upon which this is built is only £5,000,000, while there is a reserve fund of nearly £1,800,000, and the total debenture debt issued is only about £1,886,000. Why cannot it buy up the rival companies on the Witwatersrand with its own money, and dispense with the help of the Chartered Company purchased at such cost in waste paper?

Some excitement sprang up in the insurance share market in the middle of the week owing to a report that the Union Company is to be taken over by the Alliance. On the strength of the story Union shares jumped up £3. It is apparently held that because both these companies are managed by Welshmen with brains they are likely to draw together, and there were assertions made as to coming changes in the supreme management, which need not be noticed. As a matter of fact, it seems to be the Commercial Union that is going to take over the Union, and it may pay for the business by an issue

of debenture stock. In many other directions the terrible punishment inflicted by the San Francisco fire is beginning to tell upon the position of our old companies doing fire business. It is said, for instance, that the London Assurance Company lies helpless, with practically nobody coming to woo it on any terms. In another direction the Law Accident Company, it is said, is about to be absorbed by an office desirous to add accident business to its various functions, whilst as to the Law Union and Crown there is a talk of an issue of debentures to the amount of £400,000 to provide it with the capital necessary in the conduct of its business. That is the most distressing news of all in some respects, and we hope the facts may not prove to be quite so bad.

Some of the largest shareholders in the Illinois Car and Equipment Company having urged the directors to readjust the capital account so that the deficiency may not stand in the way of dividend payments steps are to be taken to that end. It is proposed to write off 25 per cent. from the par value of the share capital—that is to say $2½ from each $10 share—which would effect a reduction of $153,768, a sum which the directors consider amply sufficient to dispose of the deficiency. It appears that since the reduction of capital made in 1904 the revaluation of the properties referred to in a circular addressed to the proprietors in April last has created the deficiency mentioned in the accounts, and a meeting has been called for February 6 next in Jersey City to so amend the articles that dividends can be declared at any time that may be deemed advisable. Should the resolutions be carried by the necessary majority the directors will be able to declare an interim dividend, and as it is essential that the votes recorded should represent not less than 41,000 shares, unregistered shareholders should forthwith send in their certificates to be registered in their own names.

RHODESIAN MINING RETURNS.

Quite a remarkable advance is shown in the Rhodesian gold returns for November, for notwithstanding the shorter month, the output reached 48,503 ozs., an increase of 2,859 ozs. over October. In fact, it is the largest return ever made by the gold field, exceeding the previous best in July last by 18 ozs. In a way it is interesting, but shareholders will unfortunately find their pockets just as empty as they have always been.

The Right Hon. Sir James Fergusson, Bart., the deputy chairman of the Royal Mail Steam Packet Company, will sail from Southampton on Wednesday in the R.M.S.P. *Atrato* for the West Indies, to take part in the West Indian agricultural conference, which is being organised in Jamaica by Sir Daniel Morris, K.C.M.G., the Imperial Commissioner of Agriculture.

PUBLIC INCOME AND EXPENDITURE

The following are the receipts into and issues out of the Exchequer between April 1, 1906, and December 15, 1906:—

REVENUE AND OTHER RECEIPTS.

—	Estimate for the year 1906-1907.	Total Receipts into the Exchequer from April 1, 1906, to Dec. 15, 1906.	Total Receipts into the Exchequer from April 1, 1905, to Dec. 16, 1905.
Balances, April 1:	£	£	£
Bank of England	—	9,334,212	6,352,909
Bank of Ireland.....	—	1,117,275	1,077,369
		10,451,487	7,430,278
REVENUE.			
Customs	32,230,000	24,261,000	24,968,000
Excise	30,200,000	21,500,000	21,571,000
Estate, &c., Duties	13,200,000	10,573,000	9,205,000
Stamps.....	8,150,000	5,435,000	5,649,000
Land Tax and House Duty ..	2,650,000	380,000	430,000
Property and Income Tax....	31,500,000	6,542,000	6,298,000
Post Office	17,395,000	10,830,000	10,510,000
Telegraph Service	4,350,000	3,000,000	2,910,000
Crown Lands	480,000	390,000	340,000
Receipts from Suez Canal Shares and Sundry Loans..	1,100,000	682,070	679,205
Miscellaneous.....	1,500,000	1,247,369	955,395
*Revenue	142,755,000	84,840,439	83,515,600
Total, including balance.....		95,291,926	90,945,878
OTHER RECEIPTS.			
Repayment of Advances for Bullion		1,000,000	430,000
Under Telegraph Acts, 1892 to 1904		1,055,000	550,000
Under Uganda Railway Acts, 1896 to 1902		—	191,592
Under Naval Works Acts, 1895 to 1905.....		1,762,000	1,675,000

Treasury, December 18, 1906.

RAILWAY TRAFFIC RETURNS.

FOREIGN.

Alberta Railway and Irrigation.—Earnings for week ended December 17, $3,766, decrease $1,374.

Argentine North Eastern.—Traffic receipts for week ended November 16, £1,913, increase £472; aggregate from January 1, £79,645, increase £7,592.

Assam Bengal.—Traffic receipts for week ended November 17, Rs. 98,705, increase Rs. 14,982; aggregate from July 1, Rs. 18,26,005, increase Rs. 3,66,706.

Canadian Northern Railway.—Traffic receipts for week ending December 14, $121,400, increase $15,200; total from July 1, $3,626,800, increase $1,167,500.

Lucknow Bareilly Railway.—Traffic receipts for week ended November 17, Rs. 31,977, increase Rs. 3,333.

Quebec Central Railway.—Traffic receipts for the 2nd week of December, $9,900, increase $228; aggregate from January 1, $864,989, increase $108,988.

Rohilkund and Kumaon Railway.—Traffic receipts for week ended November 17, Rs. 19,664, increase Rs. 4,978.

White Pass and Yukon Railway.—Traffic receipts for the week ended November 7 amounted to $4,600.

ENGLISH.

Cleator and Workington unction.—Receipts for week ending December 8, £1,425, increase £150; aggregate from July 1, £28,693, increase £838.

Cockermouth and Keswick Railway.—Receipts for week ending December 15, £720, decrease £43; aggregate from July 1, £22,033, increase £260.

East London Railway.—Traffic receipts for September, £4,002, decrease £374.

East and West Yorkshire Union Railways.—Traffic receipts for the week ending December 15, £454, decrease £15; aggregate from July 1, £8,729, increase £226.

TRAMWAY AND OMNIBUS RECEIPTS.

HOME.

Bath Electric.—Traffic receipts for week ending December 12, £614, increase £3; aggregate from January 1, £40,953, increase £6,896.

Blessington and Poulaphouca.—Traffic receipts for week ending December 12, £8, increase £1; aggregate from July 1, £562, increase £48.

Bristol Tramways and Carriage.—Traffic receipts for week ending December 14, £4,543, increase £34; aggregate from July 1, £124,958, increase £5,207.

British Electric Traction.—Receipts of all the Associated Companies for the week ending December 14, £25,638, decrease £1,116; total increase from January 1, £118,099; 435¼ miles, against 440¼.

Burnley Corporation. — Traffic receipts for week ending December 15, £1,153, increase £92; aggregate from July 1, £29,142, increase £2,354.

Dublin and Blessington.—Traffic receipts for week ending December 12, £99, decrease £2; aggregate from July 1, £3,621, ncrease £216.

Dublin and Lucan.—Traffic receipts for week ending December 14, £93; aggregate from July 1, £2,983.

Dublin United.—Traffic receipts for week ending December 14, £4,617, increase £107; aggregate from July 1, £126,972, increase £6,264.

Edinburgh and District.—Traffic receipts for week ending December 15, £4,244, decrease £325; aggregate from January 1, 1906, £246,651, increase £5,019.

Hastings and District. — Traffic receipts for week ending December 13, £500.

Isle of Thanet.—Traffic receipts for week ending December 15, £217, decrease £3; aggregate from October 1, £3,316, increase £257.

London County Council.—Traffic receipts for week ending December 8, £25,650, increase £11,820; aggregate from April 1, £947,230, increase £412,738. Miles 113½, against 51.

London General Omnibus.—Traffic receipts for week ending December 15, £19,586, increase £162; aggregate from July 1, £543,800, decrease £6,453.

London Motor Omnibus (Vanguard).—Traffic receipts for week ending December 15, £4,313, increase £2,848.

London Road Car.—Traffic receipts for week ending December 15, £6,883, increase £221; aggregate from July 1, £188,010, increase £3,659.

London United.—Traffic receipts for week ending December 14, £4,914, increase £691; aggregate from January 1, £308,134, increase £27,154.

Rossendale Valley.—Traffic receipts for week ending December 14, £185, increase £11.

Yorkshire (West Riding) Electric.—Traffic receipts for week ending December 16, £866, increase £197; aggregate from January 1, £43,130.

FOREIGN.

Anglo-Argentine.—Traffic receipts for week ending December 16, £17,385, increase £2,981; aggregate from January 1, £705,894, increase £90,598.

Brazilian Street.—Traffic receipts for the month of January, Rs. 43,391, increase Rs. 303. Total receipts from August 1, 1903, Rs. 2,47,609, increase Rs. 3,737.

Brisbane.—Traffic receipts for month of October, 1906, £11,721, increase £1,371.

British Columbia Electric.—Nett earnings for Oct $[illegible], increase $13,169. Nett earnings, including income from investments, from July 1 to October 31, $[illegible], increase $[illegible].

Buenos Ayres and Belgrano.—Traffic receipts for the week ending December 9, £1,129, increase £[illegible]; aggregate from January 1, £179,532, increase £9,804.

Buenos Ayres Electric.—Traffic receipts for week ending November 3, £2,017, increase £338, aggregate from January 1, £60,712, increase £9,035.

Buenos Ayres Grand National and New Tramways.—Traffic receipts for month of November, £[illegible].

Calcutta.—Traffic receipts for week ending December [illegible], Rs. 51,432, increase Rs. 5,612; aggregate from July 1, Rs. 11,04,485, increase Rs. 67,891.

Cape Electric.—Traffic receipts for month of October, Cape Town, £11,276; Port Elizabeth, £[illegible].

Cartagena (Colombia).—Traffic receipts for September, £[illegible].

Carthagena and Herreries.—Traffic receipts for the month of November, £5,248, increase £[illegible]. Total from January 1, £47,021, increase £15,943.

Kalgoorlie Electric.—Traffic receipts for August, £5,[illegible]; aggregate from January 1, £34,8[illegible].

Lisbon Electric.—Traffic receipts for October (Milre[illegible] £121,[illegible].

Lombardy Road.—Traffic receipts for the month of Jul[illegible], increase £16; aggregate from January 1, £[illegible], increase £[illegible].

Madras Electric.—Traffic receipts for fortnight ended October 31, Rs. 14,961, increase Rs. 2,076; aggregate from January 1, Rs. 2,86,564, increase Rs. 33,552.

Twin City Rapid.—Traffic receipts for the month of October, $173,821, increase $52,840; aggregate from January 1, $[illegible], increase $787,590. Nett traffic receipts, $24[illegible], increase $10,442; aggregate from January 1, $2,513,773, increase $[illegible].

The Investors' Review.

The Week's Money Market.

Bank Rate 6 per cent. (Advanced from 5 per cent. on Friday, October 19.)

Norfolk House, Friday Evening.

Its position is most critical and unhappily one cannot see when or how an improvement is to be brought about. A point, however, has been reached where it becomes imperatively the duty of the men in control to look to its interests first and alone. Interdependent as all money markets now are, the disposition has been growing in recent years to take what may be called a world survey of credit and to act so that monetary interests in other centres of finance may not be unduly disturbed. Our leading bankers have lately therefore conducted business perhaps too much with their eyes on Berlin, Paris, and New York, sometimes glancing as far away as Bombay and Calcutta. In their anxiety to keep the credit machinery running easily they have allowed gold to be taken away by other countries to an extent which has brought us to the verge of a great credit overturn. The hope has been that by submitting to an excessive export demand for the metal other markets might be quieted down and the threatened crisis averted. It is no longer possible to pursue this waiting policy of denudation. The Bank of England reserve is too low in face of a world's crisis in credit, and gold continues to be withdrawn from it in excess of the new supplies of the metal coming in from the mines, in excess also of any contributions raked in or wrung from other markets, such as that of Paris. It has therefore become the duty of our bankers to look after the interests of their own market, come of others what may.

How critical the position is can hardly be understood until it be seen how we pull through. To make assertions about chances is therefore apt to be dangerous, and we must limit the remarks now to be made to what lies on the surface. We see money dear in New York, in Berlin and in Germany, and only superficially cheap in France. Banking credit is also extremely dear in India—so dear as to have led to such an expansion in the Indian currency as may compel the Simla Government to lock up more gold against silver released in India. We have continual reminders in the statistics of our own and other countries that trade has expanded in a remarkable degree this year, necessitating much larger amounts of banking money to finance it. At the same time that heavy crops are requiring more to move them in Egypt, in India, in the United States and Canada, in Australia and probably in South America we have been advancing money to foreign countries either through British corporations or directly in the form of loans to States in such amounts that an inconvenient power to draw away gold from us has been bestowed upon them. Add to this the effects of unbridled speculation in marketable securities of all kinds in the United States and Canada, as well as on most European bourses, and the equally patent insatiable clamour of joint-stock corporations of every description for more capital, and place alongside these symptoms the depreciated condition of many classes of securities in our own market, the impoverished state of the Bank of England reserve, the waterlogged condition of the securities market, and we have surely ground enough for urging prompt action upon those in whose control the safety of our money market rests.

Look at the Bank return for this week. It shows a decrease of £3,036,000 in the reserve, brought about by a nett export of £1,236,000 in gold and an absorption of another £1,567,000 in the internal circulation. In order to meet this drain the market has borrowed to the Bank and has already borrowed £5,842,000 on other securities. Part of this borrowing may be precautionary, brought about by fear lest we should have a 7 per cent. Bank rate imposed upon us, but all the credit thus created and much more will be needed to tide us over the end of the year, for even with £2,315,000 added this Bank week, the total of other deposits is still only £44,073,000, including an unknown amount of Japanese money. All the end of the year requirements have to be provided out of the balances thus got together, and meantime there is no certainty that a 6 per cent. Bank rate is going to stop exports of gold.

On Tuesday the Reichsbank raised its discount rate from 6 per cent. to 7 per cent. with an additional 1 per cent. for advances, and it was quite time. Compared with a year back the cash held by the Bank is down £5,552,000 and the note circulation up £3,636,000, so that altogether the Bank is £9,188,000 to the bad through distention of credit. We can consequently get no help from Germany and the figures of the Bank of France are equally unpleasant, so that any gold it may allow to be withdrawn for London can only be a matter of obliging accommodation, not the export of surplus cash. A year back the stock of gold in the Bank of France was £6,456,000 higher than it is now and the note circulation was £6,992,000 less, so that the position there is nearly £13,500,000 worse. It is unnecessary to repeat what we have already so often said about New York. There can be no easy money on Wall Street in January just because speculation and trade in the United States have spun ahead of any conceivable addition to the credit and currency resources of the country, ahead also of the realisable wealth.

All the more reason why our market must look to itself, and we are sorry that the Bank rate was not raised yesterday. When a rate has proved impotent to stop an excessive outflow of gold there is only one thing to be done—raise it. Our discount market begins to recognise this. It has been working close up to Bank rate all the week; January bills, in fact, have been taken to the Bank in larger and larger amounts because the open market would not always work even at Bank rate and latterly asked 6⅛ and 6¼ per cent. on thirty and ninety-day bills. Long usance rates have also stiffened, and these last two days some houses have been quoting 6 per cent., subject to an advance in the Bank rate for three months' bank bills. Business could not be done freely under 5 15/16 per cent., and 5 per cent. is by no means an excessive quotation for six months' paper.

All this time day to day money has been comparatively easy just because people who had balances kept them handy in view of higher rates to come, but seven-day money has crept up from 5 first to 5¼, and then to 5⅜ and 5⅝ per cent. Money into January is hardly to be got at 6 per cent., but the India Council has been lending and renewing for three weeks at that rate.

A change came over the market this afternoon, which illustrates its extreme sensitiveness. At first people talked of the Bank rate going to 7 per cent. to-day because of the large amount of gold withdrawn for Egypt. Then the views veered round until this afternoon some began to prophesy that we should have no 7 per cent. Bank rate at all. The heavy export order in gold for Egypt was said to have been suspended, postponed, or cancelled, and upwards of £600,000 went into the Bank from Paris, besides the £110,000 in bars bought last week and in from the refiners. Thus the day closes with £716,000 gold in and the market proceeded to act as if the worst were over, quoting long usances easier, sixes at 4 15/16 per cent., fours at 5⅜-7/8 per cent., and threes at 5 15/16-6 per cent. The big houses did not condescend to such figures, but they ruled. How the "gold to Egypt" failed to go, the strenuous financiers might tell.

Short loans, on the other hand, were in greater request, and bankers would not admit to less than 5¼ per cent. for seven-day money, while loans into the New Year could rarely be negotiated under 6 per cent. Call money, too, was in better request at 5 to 5½ per

To-morrow Treasury bills to the amount of £2,413,000 fall due, and will be met by the proceeds of renewals sold. Next Monday tenders for another £1,800,000 of expiring accommodation paper will be received. Presumably the Japanese will continue to be the only buyers. If it were not for them we doubt if the Exchequer could borrow under 4½ per cent., if at that. No calls of the slightest importance fall due next week. A large business in short bills was done to-day by the Bank of England at 6 per cent., and it also lent a little at 6½ per cent.

For Stock Exchange loans to be arranged on Monday the demand is likely to touch agony point with a good many people, and we do not expect to find any borrowers able to get supplies of credit much below 7 per cent. Very many borrowers will have to pay more, for the joint-stock banks, partly because of their nervousness, but more on account of the steadily increasing wants of commerce, are calling in balances from the Stock Exchange in all directions. This means an end of the year settlement of unusual difficulty.

SILVER.

Speculative buying and reports that the Indian Government was in the market caused prices for bars to improve to 32 3/16d. per oz. for cash and 32¼d. per oz. for future delivery. At these levels less support was forthcoming, and sellers had to let quotations back to 31 13/16d. and 32d. per oz. respectively before they were able to place their supplies, but a rally lifted the metal once more to the highest figures of the week, and final values were at or near the best. A keen demand for currency still exists in India, and applications for the Rs. 1,20,00,000 Council drafts offered on Wednesday were again heavy at Rs. 93,00,000 in bills and Rs. 9,08,00,000 in telegraphic transfers. Of these Rs. 10,84,000 were allotted in bills and Rs. 1,09,16,000 in transfers, tenders at 1s. 4 3-32d. and 1s. 4 5-32d. per rupee respectively receiving about 11 per cent. Special sales in transfers since Wednesday have amounted to Rs. 39,70,000 at 1s. 4 3/16d. Next week another Rs. 1,20,00,000 will be offered.

Stock Market Notes and Comments.

We have noted elsewhere the probable character of the Stock Exchange settlement begun to-day with the contangoing of Mines, and must still refrain from any lengthened notes upon the state of markets as a whole. There is still speculation going on, but it is being narrowed even in the quarters where most bridled, and prices have given way before the ominous aspect of the Money market. If it were not that the outlook in January is just as bad as it is now, or at any rate as little reassuring, we should be disposed to say that the time had arrived when many securities now depressed in price might be advantageously bought, but we dare not venture to say that as things are, because the risk of a world-wide financial overturn is greater now than we ever remember to have seen it these five-and-thirty years. We are not exaggerating in saying this, and still think that the only prudent advice we can tender to readers is to, wherever possible, act so as to do without borrowed money. Until the proudflesh of diseasedly inflated markets has been reduced we can have no stability in Stock Exchange prices.

The Week's Stock Markets.

Idle and apprehensive would be a fair description of the condition of the Stock Exchange during the past week. The monetary situation is again becoming acute, and added to the usual internal demands for gold at this time of year practically every foreign country shows a disposition to raid our stocks. Heavy

amounts have left the Bank of England this week, and although assistance in meeting the drain is promised by the Bank of France it is quite certain that withdrawals cannot go on at the present pace without forcing a further rise in the Bank rate. No change took place this week despite the fact that the German rate was raised to 7 per cent. on Tuesday, but the Bank directors deliberated long before coming to their decision, and it is said that the export of another million without any counterbalancing import would lead to a 7 per cent. rate. In these circumstances there has naturally been a disposition to curtail commitments open for the rise in some of the leading speculative counters, the gambling in which is not a little responsible for the present acute tension in the Money market, as it is certain that contangoes on Monday for the final settlements of the year will be exceedingly stiff. Bankers will be compelled to call in large sums of money from the Stock Exchange as well as from other credit dealers, and as practically the whole account will be financed by loans from the Bank of England continuation charges promise to be higher than they have been for a great number of years. Towards the close of the week the usual holiday feeling began to prevail in the House and business became virtually non-existent, but although a good many dealers will leave for the Christmas holidays with huge paper profits to their credit, they will probably return full of misgiving and anxiety lest something happen to upset the smooth running of the credit machine and produce such a demoralisation as has not been witnessed for a generation. Consols were a sinking market throughout the week, and the quotation for cash fell well below 86, the account price being maintained just above that figure. All other British Funds went back as well with particular weakness in Irish Land stock and India issues. Home County and Corporation stocks also inclined downwards, although movements have not been important, but the list of Colonial inscribed issues maintains a fairly steady tone.

Almost complete stagnation prevailed in the Foreign Bond market, and in the absence of support from the leading Continental centres the market became rather dull. Argentine and Brazilian issues showed fractional losses and weakness was again noticeable in the stocks of the Peruvian Corporation. Venezuelan, Guatemalan, Colombian and Honduras were fewer in the Central American division and Buenos Ayres Cedulas were also somewhat heavy. Most Japanese issues gave way a trifle in the course of the week, but Chinese bonds kept quite steady, and among European securities Russian 4 per cent. (1889), Egyptian Unified and Spanish sealed bonds were all somewhat better. The new Russian loan together with Turkish and Greek Monopoly ended a little easier.

The uncertain monetary outlook has had a very depressing effect on Home Railway stocks, and although business has shrunk to very small proportions quotations dwindled day by day until the declines in the aggregate reached substantial figures. Great Western ordinary stock and scrip both receded sharply, and North-Western, North-Eastern and Midland issues all fell about 30s., while the losses in South-Eastern ordinary and deferred, Great Eastern, Great Northern deferred and South-Western things were not far short of that amount. Underground issues were likewise heavy, Metropolitan falling 1½ and District 1, while the Assented Extension preference of the latter was marked down 4½. The most active stocks in the list, however, were those of the Scotch lines, which were sold freely from Glasgow owing, according to one report, to fears of further labour troubles, and, according to another, to liquidation by some of the Scotch banks. As the result of the pressure Caledonian ordinary and deferred were driven down from 30s. to £2, dragging North British deferred with them.

Manipulation by Wall Street caused the Yankee market to look strong at the opening last Saturday, but the bloom was soon rubbed off by sales from Berlin prompted by talk of an advance in the German Bank rate. The fact that the change was not made on Monday and the improvement in the New York Banks' statement had a temporary influence in hardening the market, but monetary conditions in Wall Street have been stringent all week, and dealers displayed a good deal of nervousness as to the effect of the continuous stream of new capital creations on an already overstrained position. The latest demand of this kind comes from the Chicago, Milwaukee and St. Paul, which has authorised the creation of $67,327,100 preferred and $33,183,740 common stock to be issued at par, of which $75,000,000 will be used for extending the line from Glenham, South Dakota to the Pacific Coast, and for building 500 miles of branches, and the balance is required for new equipment and other purposes. Shareholders are to be permitted to subscribe to the extent of 50 per cent. of their holdings for preferred and 25 per cent. for common stock, but the market did not like the calling up of $10,000,000 of the amount on the 31st. inst., and the price, which just before the announcement was made had been pushed up to the highest point touched since 1902, broke very sharply, the nett result being a moderate decline on the week. Efforts were made to bring about a rally by statements that Mr. Shaw was again coming to the help of the market and that the New York Central and several other companies had decided to anticipate as much as possible the payments on 1907 bonds due on January 1, a step which would release some $10,000,000. Notwithstanding these promises of assistance the utmost the "bulls" could do was to prevent prices from sliding away too rapidly, but in spite of the brake the majority of the movements at the close were decidedly adverse. In the case of Great Northern preferred, an apparent decline of $25 was partly accounted for by a deduction for the value of trustees' certificates for iron ore properties, but Northern Pacific were fully $20 down without any such allowance being made.

Another furious outburst of speculative activity in Canadian Pacific shares sent the price up to $208½ on Saturday, but even the audacity of the New York clique behind the gamble could not keep it at that for long. Profit-taking knocked a dollar or two off almost immediately, and a further relapse followed the publication of the traffic return as the market was disappointed with the decrease of $55,000, and in the end the quotation was below last week's level. Dealings in Grand Trunk stocks were insignificant, but they, too, were disposed to give way and the ordinary and third preference finished with fractional losses. The only other change worth noting in Colonial things was a recovery of 1 in Rhodesia Railways 4 per cent. first mortgage debentures, but amongst Indian Railways Madras issues were pushed up sharply.

Mexican issues were the most active in the Foreign Railway group, and the second preference of the old company especially was very strong on a rumour that the stock was to be put on a full dividend basis by reducing the rate payable on the first preference and giving the holders of that security ordinary stock to compensate them for the change. Mexican Central securities were hoisted on the expectation that the proposals for the purchase of the line by the Government would be accepted. Later in the week the "bears" got the upper hand again, but a fresh rally followed and the market closed firm, with a substantial gain in Mexican seconds. Argentine stocks have been dull and Buenos Ayres and Pacific, Buenos Ayres Western and Buenos Ayres and Pacific, Buenos Ayres Western and East Argentine all show big losses, while Argentine North-Eastern ordinary and ordinary debenture stocks, Cordoba Central income debentures and Entre Rios issues were likewise appreciably lower. Antofagasta preferred and deferred stocks were also heavy, together with United of Havana ordinary, San Paulo ordinary and Guayaquil and Quito second bonds.

Miscellaneous markets shared the general tendency and business became quiet in nearly all departments. Hudson's Bays receded steadily from 120 to 117, and although recovering slightly did not display real strength. Pekin Syndicates moved narrowly and finished lower despite a small improvement at the end.

and Shansi and Yangtse Valleys moved with the big security. Other Land shares were fairly good on the whole, and a further rise took place in stock of the Peel River Company, whose lands are to be taken over by the Government. Iron and Steel shares were inclined to shade off and Pease and Partners had rather a sharp drop. The shares of the Cargo Fleet Iron Company also became weak when the report came out showing rather poor trading results and a dividend payment derived from profits on sale of shares. Several Motor and Cycle companies' shares tended downwards, but Argylls were a fairly good market and Humbers hardened late. Steady buying of Coats' shares was the principal incident among Textile issues, and although nothing transpired to account for the purchases it is said that several thousand shares have been acquired within the past few days. Woolcombers ordinary dropped back to 2⅜ on profit-taking, but remained steady at the reduced figure and showed a tendency to recover again at the last. Meat shares and Catering issues generally kept steady, but there was a loss of ¼ in the ordinary shares of the Apollinaris Company. Associated Cements were dull, and although one or two Nitrate shares improved, this market on the whole is still flat. Russian Oil shares were inclined to give way. Brewery stocks were somewhat idle, and about the only thing to note was a rise of 20 in Guinness ordinary. A large number of Tea shares were marked up ½ or 1, but among Telegraphs Anglo "A" was somewhat unsteady. London General Omnibus stock was sold rather freely and lost 5.

The market is expecting discrimination by the banks against American securities, of which enormous masses are said to be on their way here to be carried on our Stock Exchange. There were one or two interesting items in to-day's markets, although they did very little.

Buying of Union Assurance shares continued, and the price went up to 25½. This is still, we hear, sensibly below what the purchase price may work out at. Rio Tinto shares were also bought so steadily by Paris against selling on this side that the price went up about £1. Kaffir shares were also in some request and firm, buyers being drawn in to some extent by the increased amounts distributed in dividends, and also by the comparative ease with which the account was carried over. Contangos ruled 8 to 10 per cent., quite moderate in the circumstances, and only new unintroduced things and out-of-the-way gambling counters could be charged upon pretty much what the lenders liked. The Paris market will be closed on Monday and Tuesday both next week and the week after.

TRAMWAYS AND OMNIBUS. Rise: Bombay Deb. 1, to 97-100, Brisbane 1/16, to 1 1/16-1 1/8, British Electric Traction 5 p.c. Deb 1, to 108-111, Calcutta 1st Deb. 1, to 104-107. **Fall:** British Columbia 5 p.c. Pref. 1, to 107-110, do Vancouver Debs 1, to 102-105.

Critical Index To New Investments.

ROLLS-ROYCE, LIMITED.

This company was formed as recently as March last, with a capital of £60,000, to take over the motor-car department of Royce, Limited, and the use of one of that concern's factories, but its guides are ambitious to secure a greater proportion of the demand for motors. Accordingly it has been decided to absorb the firm of C. S. Rolls and Co., which has acted as selling agents, as well as an intermediate company known as Rolls-Royce Distributing, Limited, and at the same time to increase the capacity of the works. The capital is therefore increased to £ [illegible] divided into 160,000 preferred ordinary shares of £1 each entitled to a 6 per cent. cumulative preference dividend and two-thirds of the remaining divisible profits, and 40,000 ordinary shares also of £1 each. Of these 17,012 preferred and 27,000 ordinary shares were issued in exchange for the original shares, 14,434 preferred and 12,000 ordinary shares to C. S. Rolls and Company and 1,000 ordinary shares to the Distributing Company, the ordinary shares in each case representing goodwill, and 100,000 preferred ordinary shares were offered for subscription. Applicants were expected to be satisfied with an estimate of profits based on calculations made by Mr. Royce from actual ex-

perience, "but paying due regard to the advantage of producing on a large scale and with works specially equipped with modern and special appliances." On this basis, the nett profits on the present output and estimated output of the new works are brought out at £59,635, or sufficient to pay over 25 per cent. on the preferred shares after allowing £5,000 for reserve and providing for other outgoings, and in order to prove the soundness of the calculation reference is made to the last published accounts of the Daimler Company. Four of the five directors are to be paid partly by salary and partly by commission, 15 per cent. of the nett profits over £10,000 being reserved for distribution amongst them.

Kallikote Raj Sterling Loan, 1906.

In October, 1903, an issue was made of £135,000 5 per cent. first mortgage debentures secured on certain estates of the Rajah of Kallikote and Atagada and redeemable by annual drawings extending over a period of 31 years from 1904. That issue was made for the purpose of paying off debts and liabilities and a further £77,500 in sterling 6 per cent. second mortgage debentures was offered this week for the same purpose. The new bonds will be redeemable at 105 per cent. in 20 years from May 1, 1935, and are secured by a second mortgage on the Rajah's ancestral estates, having an area of about 496 square miles and comprising the same number of villages. For the years 1904-5 and 1905-6 the average nett receipts were £19,414, of which £10,390 was required for the service of the first debentures, leaving £9,024 to meet the interest on the present issue, amounting to £4,650.

MINING NEWS AND NOTES.

*** *Frank and unbiassed answers are given to all questions relating to Mines. Address Editor Mining Section and enclose* One Shilling *for each question asked. No bucket shop circular or advertisement should ever be responded to without first consulting the* Investors' Review.

No one reasonably looked for any activity in the Kaffir Circus, after a twelvemonth of almost unrelieved depression, in the week preceding Christmas, which happened to coincide with a very short account, likewise with another outbreak of nervousness in the money market. Probably the monetary situation has had less influence than other conditions, sentimental or otherwise. Certainly, operators have not been encouraged to extend their commitments, but rather to lessen them as the holidays approached. So we may say again that no business has been done. With the probability of selling predominating, jobbers have tried their best to check it by marking prices a little lower from day to day, but the purchase of so small a lot as 50 to 100 shares has been enough to induce them to mark quotations higher. Several dividends have been declared in addition to those we enumerated last week, but they have proved no tonic to the market—have, indeed, been as unheeded as the weeping and wailing over the exaggerated, artificial scarcity of native labour. These dividends, with their amounts and yields, are given in the following table:—

	Div. Per Cent.	Issued Capitals.	Amount.	Approx. Yield. Per Cent.
Nigel	15	225,000	33,450	12
Apex	22½	150,000	33,750	7
City of Suburban (£4)	6½	1,300,000	85,000	15⅝
New Primrose	50	325,000	162,500	21½
Knight's	15	425,000	63,750	7⅞
New Rietfontein	15	612,000	91,800	11
Glencairn Main Reef	5	550,000	27,500	6½
Village Main Reef	20	400,000	80,000	10½
Knight's Deep	5	643,500	32,175	5½
Robinson Deep	17½	980,000	171 500	7⅞
Simmer and Jack Prop.	5	3,000,000	150,000	8
North Randfontein	10	450,000	45,000	6¾
Robinson Randfontein	10	600,000	60,000	10
Perges Randfontein	10	500,000	50,000	6⅔
South Randfontein	10	450,000	45,000	9⅞
Langlaagte Estate	10	470,000	47,000	8½
Witwatersrand Deep	27½	500,000	137 500	14½
Consolidated Main Reef	5	788,000	39,400	6¾
New Heriot	17½	115,000	20,125	9⅞
			£1,375,150	

* Calculated on the percentage per annum.

Four of the above are companies in the Barnato group—viz., the New Primrose, Knight's, New Rietfontein, and the Glencairn Main Reef. As we remark in "Passing Events" column, that of the New Primrose is remarkable, is far and away the best it has paid in one year, and is double that distributed in 1905. The Glencairn dividend is the first since 1898, when 25 per cent. was paid.

Rumours have been current during the week of adverse developments in the Cason Gold Mines, but these are denied from the head office at Johannesburg, the details sent thence showing that indications in the mine are, on the whole, rather promising.

As promised by the chairman at the annual meeting, an increased dividend is declared by the De Beers Company, and it exceeded general expectations. It is at the rate of 17s. 6d. per share, of which 2s. 6d. is a bonus, and though a few thought this possible, the majority looked for 15s. only. This explains the activity and rise in these shares during the week. Vaal Rivers, in the past day or two, have also smartly advanced, for some inexplicable reason.

Rhodesians have been consistently dull, with a tendency towards flatness, several of the prominent shares showing small losses on the week's movements.

There is nothing to say of the Jungle, nor has much trade been passing in the Australasian group, in which the most prominent share has been Kalgurli, which has been taken in hand again by speculators for the rise. The prices of most of the shares have not budged.

The boom in Siberians seems to be dying away; Indian shares are firm, and copper shares have, for a change, been off, mainly a reflex of the slump in the Yankee market.

Johannesburg Goldfields, Limited.—In their report for the year to June 30 the directors write sadly that the growth of the town of Johannesburg has not been in a direction favourable to that speedy development of the property which was at one time anticipated, and they doubt if any effective steps can be taken to bring about this result, which must necessarily be left to natural causes. Thus they seem content to wait for nature to undo the work done by man, to improve those economic conditions which are the effects of the policy of the mine magnates. Nature can do little towards amelioration if she be deliberately thwarted at every step by powerful and unscrupulous men, and it is less natural causes the directors of the Johannesburg Goldfields should wait for than honesty and rectitude on the part of the "bosses," who have so terrible a power to bring ruin and desolation. In the meantime, whilst adopting this Micawber-like attitude, the company's Johannesburg representative is closely watching developments, and is to keep the directors informed of anything likely to affect the property. A recent report upon the company's tree plantation shows that while many of the trees are fit to cut, there is, at present, no local market for the timber. "The economic conditions prevailing in the Transvaal render it difficult to handle the trees at a profit, and these, being practically of blue gum, are not very suitable for mining purposes." This is woeful, but if people cannot buy bread they cannot afford to buy wood, which will not feed the starving. These same trees are valued in the books at £16,308, but the directors confess that no reliable estimate of their cash value can be given. If there is no market for them they can have precious little value. Then the so-called share investments show an acknowledged depreciation on their cost price of about £17,000, but despite the existing depression the directors are confident this loss will "speedily disappear." Such optimism is most enviable. The deficiency now totals £20,508. Cash stands at only £1,055, debtors owe £2,614, and there are British and Colonial Government securities valued at £20,214, the greater part of which is on pledge at the bank for a loan of £20,071.

Zambesia Exploring Company.—It is a more distressing report than usual the directors issue for the past financial year, a further and a heavier loss following upon that of the previous year. An income of £13,793 is shown in the profit and loss account, but this includes £7,026 nett premium on the issue of 140,000 shares after deducting the expenses of their issue and the underwriting commission. This, of course, is not genuine revenue, but it is the retention of an old—and a bad—policy. Of this income, £5,608 is the "balance of interest account and estimated proportion of the profits of the firm of R. Williams and Company," so it looks as if a part of it has not actually been realised. The rest is made up of £711 profit on the sale of a farm and £447 from transfer and other fees. Outgoings of all kinds amount to £20,088, inclusive of £14,977 "balance of cost of shares written off, less balance of profit on realisation of shares." So the loss shown, despite the premium money, is £15,205, and compares with the loss of £8,334 in the previous year. Thus the credit in the balance-sheet is reduced from £28,439 to £13,144. Cash is only £445 against liabilities of £7,101, but debtors owe £36,003, and there are sundry shares and debentures of a book value of £387,412. Some worth £31,375 are pledged as security for a loan from the Bank of £6,000; other shares are held under option. This company is so closely allied to and bound up with the fortunes of the Tanganyika Concessions that the directors took firm £37,500 of the recent issue of debentures. It may be recalled that the Zambesi Company last year abandoned many of its claims in Southern Rhodesia, and we are now told that no work of any special character has been done in this region during the financial year. Prospects do not look very hopeful for early dividends.

Giant Mines of Rhodesia.—This is a subsidiary of the Enterprise Gold Mining and Estates Company, and it has already paid a dividend. Crushing operations commenced on December 15, 1905, and up to June last the plant treated 28,714 tons, yielding from all sources 14,056 ozs. for a working profit of £30,942. After deducting administration charges in London, income-tax, depreciation and other outgoings, the nett profit was £24,888 and the dividend 1s. 6d. per share absorbed £17,812, the balance being carried forward. The estimated tonnage developed to June 30, 1905, was 135,000 tons, of an average value of 12.3 dwts. per ton, while for the following twelve months 45,706 tons were developed, worth 13.7 dwts. per ton, making the total to date 180,706 tons. Of this quantity 28,714 tons were treated, leaving 151,992 tons developed at the end of June.

RAND DIVIDENDS.—The Johannesburg correspondent of the *Financial Times* cables under date December 20 as follows:—"The dividends declared by the Rand gold mining companies to date this year total £5,470,868. It is expected that the Meyer and Charlton will declare 30 per cent. and the New Heriot 20 per cent., while the West Rand Central and Champ D'Or may also make distributions. It is estimated that the aggregate dividends for the year will be £5,548,328, or an increase of £800,000 over 1905.

RANDFONTEIN ESTATES.—It is announced that at the forthcoming annual meeting to be held at Johannesburg the directors will recommend the distribution to shareholders, in such manner and form as may be determined at the said meeting, of a portion of its capital assets, consisting of certain 300,000 shares of the nominal value of £1 sterling each, being a portion of this company's share holdings in its subsidiaries, on the basis of one share for every 10 shares, fractional parts of the distributed shares being allowed for in cash at par. This is the second scrip dividend paid by this company, the first being in Porges Randfontein shares in 1896.

BULUWAYO SYNDICATE.—The results of the past year's working are far from brilliant, though it is a nice change to see a profit. Dividends and interest gave £2,692, and rents £365, total £3,057, a nett profit of £760 being shown after deduction of all expenditure. With this the directors are able to reduce the debit from £8,575 to £7,815. Only £360 is owing to creditors, whilst cash assets amount to £26,600.

PENHALONGA PROPRIETARY MINES.—In order to raise funds for the enlargement of the plant to double its present crushing capacity, the directors propose to increase the debenture issue to £199,350. This will provide £61,850, estimated to be sufficient for all needs. The issue is guaranteed for a commission of 5 per cent. by Messrs. Farrar Brothers, and the Anglo-French Matabeleland Company.

MOUNT LYELL MINING AND RAILWAY COMPANY.—Operations during the six months ending September 30 were restricted by the inclement weather, so the output was less than in the previous half-year. Notwithstanding this, the directors are able to make a good financial exhibit, thanks largely to the high price of the metal. Though a smaller quantity of material came from the Mount Lyell itself, the stoping operations in the North Mount Lyell produced 59,128 tons, a somewhat larger quantity than during the preceding period. Active development work was carried on in the mine, and again gave encouraging results, additional ore bodies being met with, whilst the areas of others were found considerably to exceed in ore contents the estimate previously formed. At the same time, the grade has been well maintained. These characteristics give hope for expecting that payable ore will be found at lower depths, and the result of operations at the 850 ft. level in particular are being awaited with interest. The alteration in the scheme of open-cutting in the Mount Lyell mine makes the reserves available by open-cut excavation on September 30 1,342,000 tons, the average of which is computed at 0.60 per cent. of copper, 1.92 ozs. of silver, and 0.044 ozs. of gold. At the same time, there will remain available by underground mining, below the No. 4 level, 2,614,000 tons, of an estimated average value of 0.52 per cent. of copper, 1.97 ozs. of silver, and 0.025 ozs. of gold. The last figure includes about 445,000 tons of pyrites, which will have to be left standing between Nos. 4 and 5 levels, as not being available for open-cutting on account of excessive overburden.. In the North Mount Lyell the position of the ore reserves is:—Available for open-cutting, 5,293 tons; available for underground mining in the main ore body, &c., 65,367 tons; in the new development, &c., 244,954 tons; and in the Lyell Tharsis, 6,547 tons, making a total of 322,161 tons. As against the quantity estimated to exist at the beginning of the half-year, this represents an accession of 189,000 tons in the half-year, less the amount extracted and smelted during the period. But the assay value to be placed against these reserves is lower than that given in previous estimates. Based on experience, and also taking into consideration the fact that a fairly large proportion of medium grade ore is available in addition to the richer ore characteristic of the main ore body and the new development, it is estimated that the average assay value of the ore reserves is:—Copper, 5.25 per cent.; silver, 1.50 ozs.; and gold, 0.005 ozs. During the half-year 199,391 tons of ore were broken, or 16,648 tons less than in the preceding half-year. The converters produced 4,491 tons of blister copper or 130 tons less, the metallic contents being:—Copper, 4,444 tons; silver, 329,183 ozs.; and gold, 10,746 ozs. Costs were somewhat higher per ton in all departments, chiefly owing to the weather. Sales of blister copper fetched, nett, £461,639, and the revenue from the railway was £17,737, total £479,376, yielding a working profit of £281,698. After adding £2,086 interest on investments, providing for administration expenses in Melbourne and London, depreciation, &c., the nett profit for the half-year came to £239,397, whilst the sum brought down was £414,289, making the huge aggregate of £653,687. A dividend of 1s. 3d. and a bonus of 1s. 3d. per share were paid in June, £25,000 is put to the reserve fund, and £5,000 to the insurance fund, leaving £473,687. The above dividends were on account of the previous half-year. For the second half the distributions were announced a few days prior to the meeting in Melbourne on November 30, aggregating 3s. 3d. per share, with the bonus, an increase of 9d. per share. In the six months £31,500 of the debentures were redeemed, leaving a balance of £45,220 still current. The average price realised for the copper was £85 9s. 4d. per ton, compared with £80 7s. 3d. for the previous period, but since the close of the half-year the price has risen much higher which probably accounts for the larger distribution the directors felt encouraged to make. The balance-sheet, it is almost needless to say, shows a strong financial position.

CHILLAGOE RAILWAY AND MINES.—This company proposes to construct a railway from the Chillagoe district, in Queensland, to the Etheridge goldfield, a distance of about 145 miles. In order to provide the funds for this, the directors intend to increase the capital from £350,000 to £700,000 by the creation of 700,000 new 10s. shares. The meeting to consider the scheme was convened in Melbourne on the 21st inst., and in all probability it will have been sanctioned. Doubtless such a railway is much needed to provide transport facilities for a region said to be very rich in all kinds of minerals. The cost of the railway is estimated at £400,000, upon which sum the Queensland Government has covenanted to pay the company an annual bonus of 2½ per cent. and all profits earned by the line in excess of the bonus. At present it is not anticipated that it will be necessary to issue more than 300,000 shares, it seems.

BIBIANI GOLD FIELDS.—The accounts to June 30 cover the first year's continuous working to the full capacity of the company's present milling plant. In the period 35,062 tons were crushed and 35,651 tons of tailings were evaluated, and bullion was recovered to the value of £115,027, equal to £3 1s. 8d. per ton. Interest and transfer fees gave £182 and the nett profit was £31,108. No dividend is paid, for the directors appropriate £25,120 in making special depreciations from the machinery, plant, development, and mine expenditure accounts, carrying forward £5,987. On the whole, the results are good, but unless they are greatly improved upon they do not promise high dividends. The ore reserves blocked out at the end of June were estimated at 110,474 tons, of an average value of 17.3 dwts. Working costs were very high, but reduction is promised. A good balance-sheet is shown.

BRILLANT CENTRAL.—Only 9,986 tons of stone were treated in the half-year to September 18 against 14,109 tons in the previous half, producing 4,872 ozs. worth £22,325, and for the first time for some years no dividend was paid, though these have been gradually dropping off in the last year or two. The past term has been one of exploration and development, and the opening out works have yielded but a small quantity of payable stone. The heavy amount of development has been responsible for the absence of profits. A discovery of payable ore in the 1,318 and 1,440 ft. levels gives probable value to an area of 7½ acres, and there is the reef in Kelly's Queen block yet to be found. Looking at indications generally an improvement in the position of the company is hoped for.

MYSORE WEST AND MYSORE WYNAAD GOLD COMPANY.—Sales of gold by the Mysore West in the year ending August 31 realised £19,705, and the income totalled £20,247. The nett profit was £7,349, and this is appropriated for the reduction of the development account. Available assets are well over the liabilities, but the report is somewhat melancholy. Returns fell off in the month of February, and since that have continued poor. This applies equally to the Mysore Wynaad Company, as both are working jointly the Tank Block property. This company's profit was £7,140, also written off development expenditure, leaving a balance of £614 to the debit of the account.

CARRINGTON'S LION P.C. MINING COMPANY.—For the half-year to September 3 the output was 3,104 tons for 1,891 ozs. of gold of a value of £5,954; concentrates and residues gave £134, total £6,089, an average of £1 19s. 2d. per ton. During the term two parcels of sulphide ore were shipped to Liverpool for experimental treatment at the smelters, and information as to the returns from these is expected to come at any moment. A quantity of copper ore is now being barged preparatory to treatment at the smelters. The balance-sheet shows a credit of £914, as against a debit of £109 at the commencement of the half-year.

PUSING LAMA TIN MINES.—Formed as recently as 1904 this Malay tin mining company has already met with considerable success, which must be attributed largely to the ruling high price for tin. In the year to June last the total sales of tin ore realised £71,818, the production being some 719 tons, averaging £99 18s. 3d. per ton. After deducting every item of expenditure, including depreciation, the nett profit was £[illegible], and the dividends paid aggregated 20 per cent. As a balance of £10,513 was left, the directors appropriate £[illegible] to write additional amounts off various assets, leaving £[illegible] to be carried forward. Cash in hand amounted to £[illegible], and there is an investment account of £3,000 represented by Consols at cost, and a further £3,000 has since been invested in the same security. On account of the current year five interim dividends have been paid, totalling 6s. per share, equal to 30 per cent. An additional 15 stamps are being added to the plant.

BONNAVISTA COPPER MINES.—A telegram from Mr. Herbert C. Marks, the general manager, says the development of the Tankardstown section is proceeding satisfactorily. All faces of ore in this section are maintained, the widths and values, the average assays of the faces being 4 per cent. In the Rosary section the reef in 20 fathom level north continues good. The lode has been picked up in new ground west of the old workings on the 38 fathom level. Average width is 4 ft., and average value 4.44 per cent.

Along with a wall calendar of a novel, if somewhat unconventional design, with a portrait of Sir Walter Scott, one of the founders of the company, the Edinburgh Life Assurance Company sends us a very handy desk blotter and diary for 1907.

Company Reports and Balance Sheets.

*** *The Editors will be much obliged to Secretaries of Joint Stock Companies if they would kindly forward copies of Reports and Balance-sheets direct to the Office of the* Investors' Review, *Norfolk House, Norfolk Street, W.C., so as to insure prompt notice in these columns.*

African Banking Corporation, Limited.

The gross profit of this bank for the half-year ended September 30 was £91,511. That is a decline against the corresponding half-year of £5,437, and as a shrinkage of £2,745 was then shown, the total drop within the last two years has amounted to over £8,000. This time, however, the sum brought forward was £7,095, against £2,954, so that the entire credit is not so very much worse at £98,606. Moreover, there was a saving in expenses of £551 at £68,840, and rebate on bills was also a trifle less at £9,069. Depreciation of furniture was allowed to the amount of £921, and, by passing over the staff guarantee and savings fund which twelve months back got £2,000, the balance of nett profit is brought out at £19,776 against £18,380. The directors, therefore, experience no difficulty in maintaining the dividend at the rate of 6 per cent. per annum, absorbing £12,000, and are able to increase the sum carried out from £6,380 to £7,776. The balance-sheet does not show quite such extensive movements as we have lately been accustomed to see in South African bank statements, and now that the inflation of business which immediately followed the close of the war has been followed by the inevitable reaction, the main items of the accounts may not appear so swollen. The bank's nett circulation shows a fair increase to £317,084, but the current and deposit accounts are £158,445 lower at £4,617,655. Drafts, acceptances, endorsements, and bills discounted appear at £454,166 against £480,249, and on the assets side the principal movement is in the bills of exchange purchased, which show a reduction of over £400,000 to £1,025,191. This decline permits an increase in the bills discounted, loans, and advances of £191,987 to £2,953,686, and the total cash balances are also moderately larger at £1,352,928, in spite of a reduction in the money at call and short notice of £55,000 to £170,000. Investments are just a trifle less at £405,341, while bank premises, furniture, &c., have been slightly increased to £150,833, the total of the items being £5,957,751 compared with £6,078,300.

National Bank of Australia, Limited.

This rather important bank increased its gross profits during the half-year ended September 30 last by £11,875 when compared with the corresponding period of 1905. The total is now returned at £109,438, but there is a small decline from £6,886 to £6,149 in the balance brought in, so that the entire credit is £115,586 compared with £104,449. Expenses were only £2,683 larger at £60,640, and note and income-taxes advanced £314 to £3,815, leaving £51,131 nett, an improvement of £8,140. First of all the directors double the contribution to reserve at £10,000, making it £140,000, and after providing the preference dividend at 5 per cent., the distribution on the ordinary shares is raised from 4 to 4½ per cent. per annum and the carry forward is slightly increased to £6,657. Notes and bills in circulation each show small increases to £230,944 and £668,260 respectively and the Government deposits, almost the whole of which bear interest, are substantially higher at £601,455. Other deposits not bearing interest are £2,606,785, an increase of £194,265, while those bearing interest have gone up by £324,552 to £3,869,307. Against these heavier liabilities the cash or liquid assets show an increase of £211,814 at a total of £3,290,307, although some of the constituent items show rather important movements either way. The coin, bullion and cash at bankers is up by £241,931 to £1,867,538, but the coined gold in transit shows a drop of £75,000 to £50,000. Investments £680,143 are less by £44,980, while bills and remittances in transit are nearly £100,000 larger at £600,109, indicating perhaps the larger business transacted. The notes and bills of other banks did not show much change, while the balances due from other banks are moderately less at £70,943. Bank premises at cost are something like £4,000 down at £445,974, and other real estate appears at £146,981. This shows a reduction of £69,978, but whether it means that the bank has been fortunate enough to get rid of some unproductive property we are unable to say. Bills discounted and other advances, £5,885,731, showing an increase of £506,852, complete the balance-sheet total of £9,768,993, last year's aggregate having been £9,124,172.

Newcastle Breweries, Limited.

Because it seems to us the most important in view of the considerable changes which are being effected by the 1904 Licensing Act in the position of brewery companies, we think it well to make reference to the auditors' report attached to the balance-sheet of this company before referring to the profits of the year. It says that depreciation at the same rates as in previous years has been written off the horses, carts, drays, and casks, while expenditure on other items such as plant at the Haymarket brewery extensions, &c., is written down at special rates, mostly over short periods of time. So far good, but the report proceeds to say that no special charge for depreciation has been made in respect of leases, tenancies, and licences of those houses originally acquired by the company on its incorporation nor for any difference between sums received for properties sold and the prices at which they were purchased or taken over at that time. Against this, however, the freehold and leasehold properties depreciation account now stands at £29,000, and there is a sum of £71,000 under the head of general reserve fund. In the case of leasehold properties acquired since the present undertaking was formed depreciation accounts have been opened for each property by which the expenditure thereon will disappear within the periods of the leases. The last part of the auditors' certificate is therefore as satisfactory as the first, but shareholders no doubt would like to have an assurance that the reserve and depreciation accounts mentioned are ample to cover the losses which the auditors' words imply. It may be noted that this general reserve is increased to £73,000 by a contribution from the past year's revenue, and the depreciation account is raised by £1,000 to £30,000. In addition, £760 is carried to the lost licence reserve account, making it £14,000, so that altogether the accumulations reach £117,000, in addition to the premium redemption account, raised to £26,500 by £1,500 now added. These accumulations must be accounted pretty substantial and may be ample for all purposes, but the company is a large one, and its property also stands at big figures. Property and goodwill, for example, have a balance-sheet value of £858,825, while special expenditure on new buildings and alterations to houses to be written off over a term of years appears at £177,549. The additions to this item last year were £16,693, and the proportion written off is £8,533. The Haymarket plant and machinery account has been reduced by £877 to £12,097, and the brewery extension account by £616 to £3,304. Sundry other assets were increased by £973 and lowered by £566, and the carts, horses, casks, &c., are valued at £5,140. Stocks form a pretty substantial item, £92,808, but debtors are distinctly small at £24,035 when compared with creditors of £111,757, including £47,170 due on secured loan. Investments in allied companies stand at £88,233. The cash at bankers and in hand is no more than £8,096, and there are two items on the asset side to be written off out of profits, the one called unexpired licences and compensation fund charge £6,562, and the other, investments depreciation account, £7,270. The gross profits for the year, including transfer fees, were £107,937 and the nett £71,273, the latter showing an increase of £14,391 compared with the previous twelve months, due to an improvement in trade and a reduction in the cost of hops. Unfortunately this additional profit has to meet two important deductions, a sum of £5,357 being payable for the first time to the compensation fund, while £7,270 has to be applied to eliminate the item of investments depreciation just mentioned, representing, apparently, the decline in market values during the period under review. After meeting debenture interest and directors' fees, and adding £6,157 brought in, the amount still for disposal is £36,003. The dividend of 6 per cent. on the preference shares takes £12,000, 6 per cent. is provided for the ordinary shares, the various appropriations to reserves already noted are made, and £6,743 is carried forward.

Huggins and Co., Limited.

After a glance over the balance-sheet and profit and loss account for the year to September 30 just submitted by this company shareholders will turn with a certain sense of relief to the auditors' certificate. Not that it is an entirely satisfactory statement from the shareholders' standpoint, but it reassures on one or two points where grave doubt hitherto existed, and to that extent is certainly comforting. It says, for example, that with regard to the debts due to the company, whether for goods, rent, or interest on advances all ascertained bad debts at the date of the balance-sheet have been written off, and in addition the directors have made provision for loss of loan principal, which in their judgment will occur hereafter, upon a basis which the auditors consider is fair and reasonable. When we look at the accounts and find that the loans to customers stand for the immense sum of £682,471, the importance of this certificate is immediately apparent. Book debts and rents receivable are comparatively trifling at £11,893, but all the same it is satisfactory to know that the item represents good value. It is further pointed out that no general reserve for bad and doubtful debts exists, but under the circumstances this need not cause immediate anxiety. A loss of £2,755 on the investments now standing at £45,805 has been adjusted by a book entry, the deficiency having been written off reserve fund. This was first increased by £794 by an appropriation from the 1905 profits, and its total at the date of the balance-sheet was £19,569. On the other side, we have a goodwill account of £287,199, and since the company manages to pay just 1 per cent. on the ordinary shares for the past year, the real value of this item needs no description. The freehold and leasehold estates, fixed and loose plant, &c., are down for £507,157, and although the total share and debenture capital is no less than £1,400,000, the directors have been driven to raise money by bank loan mortgages and the acceptance of deposits, total sums under these heads being £103,617. The profit on brewing for the past twelve months was £72,781 or £2,337 more than last year, and profit rental increased by £10 at £3,716, but interest on loans to customers and investments was less by £1,488 at £33,926, and transfer fees fell off £3 at £28. The entire revenue was therefore less than £1,000 larger at £110,452, and as the charge for maintenance and depreciation showed an increase of £1,441 at £13,252 and charges on trade rose by £3,370 to £41,435, the balance of nett profit showed the serious reduction of almost £4,000 at a total of £55,765. Directors' and trustees' fees were £2,800 or the same as before, and despite a saving in interest charges of £969 at a total of £24,230, the actual nett income is still about £3,000 worse at £28,735. There was also a severe decline to £1,604 in the balance brought

in, and the directors find themselves with only £30,330 to divide, a decrease of over £5,000. Therefore, after providing the preference dividend of 4½ per cent., it becomes necessary to reduce the distribution on the ordinary shares by 2 per cent. to 1, adding £2,000 to reserve, making it £21,569, and carrying forward the moderately larger sum of £2,340.

EDINBURGH UNITED BREWERIES, LIMITED.

In their report for the year ended October 31 the directors say that the sales were somewhat in excess of those for the previous twelve months, and the profit earned showed a satisfactory improvement due to the reduction in the cost of materials, and working expenses. During the second half of the year the business has steadily improved, it is said, and the prospects for the coming year are favourable. All this is very gratifying, but it does not say much for previous achievements since even now the revenue only provides the interest on the debentures, and six months' dividend on the preference shares, bringing the payment down to October 31, 1904, and leaving a couple of years still in arrear. All told the income was £17,021, from which the general charges took £2,147, depreciation £1,500, and the directors' fees, a certain sum waived, £450, leaving £12,923. With £1,683 brought in the disposable credit is £14,607, and after providing the payments indicated, the sum carried forward is £1,327, so that even to accomplish what the directors now propose it was necessary to draw on previous revenues to a moderate extent. In these circumstances it is useless to look for a very wonderful financial position, and the first thing to be noted in the balance-sheet is that the debenture debt of £199,600 is only £20,000 smaller than the issued share capital. The property account, after allowing an aggregate of £19,500 for depreciation, has a balance-sheet value of £316,138, and the reserve fund is only £10,000. Even that is working capital. Total sum due to sundry creditors is £11,872, and on the other side there are sundry debtors £4,032, trade debts £39,948, and investments and loans to customers £63,313. It would be nice to know that the last-named item represented realisable value, and could be converted into cash if need be, and shareholders should further note that while the directors talk of the profits showing satisfactory improvement the auditors say that the sums spent on upkeep of properties, plant, &c., and set aside for depreciation during the year were considerably less than the average amount for previous years. In addition to the debenture debt mentioned, the company has mortgaged some of its properties for £11,150, and it did not really possess any cash at the date of the balance-sheet, there being a balance due to the bank, less cash on hand and at agencies, of £463.

EAST INDIA DISTILLERIES AND SUGAR FACTORIES, LIMITED.

From the report of this very fluctuating business for the twelve months to September 30 we learn that low prices for sugar prevailed for the greater part of the period, and profits, which were really very satisfactory for the previous year, took a terrific plunge downward. Shareholders will, therefore, be very pleased to hear that prices have recently improved, with every appearnce of their being maintained, and on the present basis the profits are satisfactory. The proceeds of the issue of the new capital made during the year have been laid out in improvements and extensions, and it is said that the benefits of the expenditure should be realised during the coming season. The trading revenue, including transfer fees, appears at £24,389, being a decrease of £23,149 against the previous twelve months, and the nett balance is only £4,330 compared with £25,320. Among the charges, we may mention the managing agents' allowance, commission and expenses in Madras £2,942, debenture interest £7,297, and sinking fund £3,000. Last year the directors not only paid a dividend of 10 per cent. on the ordinary shares, but added £7,500 to reserve, but undeterred by the company's previous misfortune, the board now proposes to appropriate this money again, and bring it in to the revenue account, together with a further sum of £1,420 set aside last year for Kulasecrapatnam and not now required. These credits, with £6,423 brought forward, make up a total of £19,673, which enables the directors to provide £14,000 for the 7 per cent. preference dividend, and to carry forward £5,673. When dealing with the position twelve months ago we expressed the hope that the reserve fund then started would increase as rapidly as possible, and it is undoubtedly very disappointing that the directors now propose to wipe out the fund in order to keep up the dividend on the preference shares. It is true that if they did not do this the preference dividend would fall into arrear, and would have to be made up sooner or later from profits, leaving the ultimate position no better, and it may be that in the current year it will be possible to restore this money to the reserve fund and something besides. A further amount of £6,800 in second debentures was redeemed during the year, making a total to date of £13,600, and leaving the entire debenture debt, first and second issues, at £140,299 compared with the original amount of £180,367. The properties and goodwill, after deducting a trifle on account of sales, now stand at £346,122, and the buildings and plant at £27,508. A further sum of £19,466 is represented by a loan on mortgage and advance against stock in connection with the Sarangapany sugar mills, and as noted the trifling reserve now disappears. Sundry creditors are fairly high at £26,960 and £20,583 has been raised on loan in Madras. Stocks are large at £89,588, but debtors are only £19,177, and the cash balance is not very startling at £4,509. An investment in Rupee paper at cost appears at £2,303, and so far nothing has been written off the cost of the new issue amounting to £6,375.

SOUTH AFRICAN HOTELS, LIMITED.

Every document relating to South Africa produces increasing evidence of the misery and depression still prevailing there, despite, or perhaps in consequence of, Chinese labour and other money-losing expedients, and the directors of this business have to deplore a very serious decrease in the profits for the year to September 30 last. They say it is entirely owing to the very acute depression that has prevailed throughout South Africa during the period under review, more particularly since March last. After deducting all local expenditure and depreciation of furniture, the profits in South Africa are returned at £[illegible]. Another £256 came in from interest and transfer fees, making £6,281 from which the directors' and trustees' fees and other small charges absorb £523, leaving £5,758. No less than £5,311 is required for the service of the debentures and income-tax, but the directors have already distributed £1,400 by way of interim dividend on the preference shares, so that it has been necessary to draw on the balance brought forward of £1,143 to the extent of £948. This means that only £195 is carried forward, six months' preference dividend is in arrear, and the ordinary shareholders are, of course, entirely out in the cold. The directors hope that during the ensuing year the existing causes of depression will have passed away, and that they will be in a position to show materially increased profits. Proprietors will fervently echo that hope, their sufferings being rendered the more acute by the lavish promises held out to all those putting money into South African ventures, and now that the new colonies are to be given constitutional government, there is, perhaps, some reason to believe that in due time the conditions out there will steadily grow better. The depreciation mentioned in the profit and loss account is rather small at a nett sum of £780 on a total of £170,891, especially as the company is not yet the happy possessor of a reserve fund. The debentures, however, will be steadily redeemed at the rate of £2,000 a year, and so far £4,000 has been paid off. The provision of the debenture money, however, is evidently taxing the company's resources somewhat, as a loan has been raised on the security of one of the hotels for £15,000. On the other side we note that the company has granted a loan of £2,810, which apparently cannot be called in. Trading balances are a little adverse, and the cash balance is very poor at £293, while the stock of wines, spirits &c., seems equally small at £2,199.

VICTORIA PIER AND PROMENADE HOTEL COMPANY, SOUTHPORT, LIMITED.

A further shrinkage of £717 took place in the hotel receipts of this company for the twelve months ended October 29, but the restaurant and outdoor department gave more, and the gross income from all sources showed a decrease of £404 only at £17,392. Expenses, however, were brought out at £15,560 or £352 less by the simple expedient of omitting to write anything off repairs and renewals suspense account compared with £500 a year ago, on the plea that the outlay on structural alterations, furnishing and decorating, &c., was exceptionally heavy. Included in the outgoings, too, was the licences compensation fund charge, but this does not appear to have been onerous, as the item, which covers rates and taxes, &c., is no more than £[illegible] larger. With £84 more at £151 from the previous account, the available balance was £2,184 against £2,151, and last year's dividend of 3 per cent. is repeated, leaving £384 to be carried forward. The hotel land and buildings are valued at £49,426, and the furniture and fixtures at £23,200, against which there is not a single penny of reserve, but another £1,000 of the mortgage has been paid off, reducing the amount outstanding to £16,000. Liabilities to sundry creditors stand at £852, to meet which there are £209 due from customers and £2,422 in cash.

COSTA RICA ELECTRIC LIGHT AND TRACTION CO., LIMITED.

After a long period of adversity this company is at last making a little headway, and during the twelve months ended June 30 managed to earn a nett revenue of £12,418 compared with £10,159 in the previous year and £9,155 in 1903-4. With £140 from interest and transfer fees the total income was £12,558, and after providing administration expenses and debenture interest a balance of £2,474 was left against £302 which has been written off the debit brought forward, reducing it to £1,374. During the year a further issue of £10,000 6 per cent. debentures was made, out of which £7,758 was spent on the construction of a new dam and the purchase of additional machinery and cables, bringing the outlay on property up to £274,550 against a share capital of £130,000 and a debenture debt of £[illegible],100. The company having been in rather low water for the greater part of its existence, the auditors find it necessary to draw attention to the fact that nothing has yet been allowed for depreciation nor for the creation of a sinking fund against the handing over of the tramway to the municipality without compensation on January 1, 1956. Discount and commission on the debenture issue is another heavy item, amounting to £2,056, with regard to which no provision has been attempted, and there is therefore a good deal of dead weight to be cleared away before the shareholders can expect to derive any benefit from the improvement in business. The current position, however, is fairly satisfactory as against sundry creditors, including £1,822 for debenture interest unpaid, of £8,041 the company has £2,390 to come in from sundry debtors and £10,142 in cash.

BOROUGH OF PORTSMOUTH WATERWORKS COMPANY.

The purchase of this undertaking by the Portsmouth Town Council seems to have been under consideration, and provisional arrangements were made between the company and the council's water committee. The provisional agreement was adopted by a majority of 42 votes, but at a special meeting of the Town Council held on September 18 it was decided not to adopt the recommendation of the water committee to seal the agreement. The municipalisation of the waterworks therefore remains in

abeyance, and it is perhaps fortunate for the ratepayers that that part of the company's Bill in Parliament seeking an extension of the present area failed to find acceptance. With this clause expunged, however, the Bill was duly sanctioned, receiving the Royal Assent on August 4 last, and the directors say that it contains many provisions which will prove of great value. Among other things the Act authorises the creation and issue of further share capital and debentures or debenture stocks, and the directors intend to immediately seek authority from the shareholders for raising additional money. During the half-year ended September 30 2,719 yards of additional street service mains and 76 yards of trunk mains were laid, making a total of about 63½ miles of trunk mains and 153 miles of street service mains. The additional services connected during the six months were 624, and the total number of premises now under constant supply in all districts is 46,840. Revenue from water rental was £36,114 and from other sources £728, making £36,842. Maintenance and distribution cost £10,489 and management £3,603, leaving £22,751 nett. From this the directors allow £4,500 towards the Parliamentary expenses, charging the balance of £2,327 to capital account, interest on mortgages required £1,520, and on debenture stock £1,357. With £13,110 brought forward the sum still left is £28,483, which enables the directors to recommend the payment of the full statutory dividends with £1,358 carried to the arrears of dividend fund. Including £500 already standing to the credit of that fund, this will permit a similar distribution to be made on account of arrears as on previous occasions, in accordance with the scheme already approved by the shareholders. After making the usual deductions for void houses, &c., there will remain about £8,081 to be carried forward.

Cavendish Mortgage Co., Limited.

During the year ended August 31 this company's resources were increased by the addition of £2,029 in deposits and loans, of which £964 was advanced upon mortgages, raising the total under this head to £83,040, and £1,024 was invested in freehold and leasehold properties, making £34,328. The total income, however, was only £312 up at £8,067, while interest paid out required £563 more at £1,813, and management expenses were £155 heavier at £1,632. Preliminary expenses were wiped out a year ago by the appropriation of £193 from revenue, so there was nothing to provide in that way on this occasion, and the directors this time place only £27 to leasehold sinking fund charge against £87 last time, but even so the nett profits were £154 down at £4,594. With £2,405 or £475 more brought in the disposable balance was made up to £7,000 compared with £6,678, so the dividend of 5 per cent. is repeated, and by ignoring the reserve the sum carried forward is raised to £3,728. So far as the current position is concerned the company is comfortably enough off, as only £459 is due to sundry creditors against £140 to come in from rents and £3,872 held in cash. The reserve fund, however, only amounts to £2,000, all in the business, while leaseholds, after allowing for the insignificant sinking fund charge above mentioned, are valued at £28,044, and the condition of affairs generally is not one upon which the directors can be congratulated.

United Wire Works, Limited.

The directors of this concern are pleased to report that, notwithstanding the exceptionally high prices of metals throughout the year to September 30, the result of operations has been satisfactory, but the outcome from the standpoint of the ordinary shareholder is not particularly brilliant. The nett profit was £8,013, including £2,089 brought forward, and after paying the preference dividend for the year to May 15 a sum of £4,763 is left. The special reserve fund is next credited with £650, a dividend of 3 per cent. is proposed on the ordinary shares, and £2,133 is carried forward to meet the final dividend on the preference shares, which will take £1,229 and leave £904 actually free. The special reserve fund is now £5,750, and the property, plant, machinery, and goodwill are down for £109,197. There is a good deal to come in from customers and on bills receivable, and the amount due to creditors is only £3,985, but the cash in bank and on hand is small at £678. Stock-in-trade, however, has been valued at £22,420.

R. H. and S. Rogers, Limited.

Including £893 brought forward, and £3 from transfer fees, &c., the nett profit shown by this business for the 13 months to October 31 is £12,132, from which the directors are entitled to the fairly generous amount of £1,499. Interim dividends at 5 per cent. per annum on the preference shares and 2½ per cent. per annum on the ordinary shares for seven months have already been paid, leaving £7,133, and the directors now propose to pay the balance of the preference dividend and to make a final distribution on the ordinary shares at the rate of 7½ per cent. per annum, adding £500 to reserve, and increasing the carry forward to £1,383. Before the profit was brought out the directors added £2,859 to the depreciation reserves, raising their total to £16,702, and the ordinary reserve fund will now amount to £9,100, making aggregate accumulations of £25,802 against the property account of £126,342, including £1,598 added during the year. There is also an insurance fund of £484. Trade and other creditors amount to £11,239, but debtors owe £33,916, cash is £3,429, and stocks are valued at £45,508.

Samuel Barlow and Co., Limited.

The profit earned by this company for the year to October 31 was £6,474, and the substantial balance of £5,089 was brought in, making £11,563. Debenture interest and preference dividend take £3,600, and £1,100 is set aside to the sinking fund for the redemption of debentures. A dividend of 10 per cent. is then paid on the ordinary shares, but in order to do this the directors have to cut down the credit carried forward to £4,363. There is a reserve account of £1,301, and a suspense account of £750, but the largest accumulation is the sinking fund for the redemption of the debenture debt amounting to £11,361. Land, water rights, buildings, &c., are in the balance-sheet at £57,461, and the goodwill is considered worth £24,564. Trading accounts are rather considerably adverse, but the stock-in-trade is down for £12,653, and £8,382 is held in cash, apart from £16,011 paid into the hands of the debenture holders' trustees.

Cargo Fleet Iron Co., Limited.

It is not so much the fact that this company pays a dividend of 5 per cent. only for the past year as the manner in which the necessary revenue has been gathered together which caused weakness in the shares when the report came out. There is a profit for the year to September 30 of £141,860, but of this only £54,257 came from manufacturing account, the balance of £87,602 being derived from a sale of shares in the Allied South Durham Steel and Iron Company. Why these shares were sold at all is not clear, the board making no direct reference to the matter in the report, and it certainly seems a little strange in view of the fact that this company, the South Durham, and the Weardale Steel, Coal and Coke work together for mutual benefits. From the income mentioned the directors' fees and trustees' remuneration require £2,825, debenture interest is £22,500, other interest and renewal of bills reached £12,150, and £20,928 is written off against experimental and development account. Altogether these items add up to £58,402 or quite £4,000 in excess of the actual manufacturing profit. Therefore the dividend of 5 per cent., requiring £50,000, and the addition to reserve of £30,000 comes entirely from the profit on South Durham shares, the balance carried forward being £3,457. To some extent the business was still in the process of making during the year, and the directors point out that neither the finishing mills nor two of the Talbot steel furnaces contributed much, if any, revenue to the past year's account. All, however, are now completed, and the current year should give us a better indication of the probable achievements of the company in the future. Another Talbot furnace is to be erected, making four in all, and additional plant will be necessary for the manufacture of steel rails. Between them these additions will cost about £70,000, and as the expenditure to date is largely in excess of the issued capital the undertaking is rather heavily in debt. To rectify this, arrangements will be made during the current year for the provision of further funds, probably by an issue of preference shares or second debentures. Capital expenditure in the year came to the important amount of £332,759, raising the total to £1,720,058. South Durham Steel and Iron shares represent a further amount of £138,346, and as the company possesses 106,339 ordinary and 123,661 preference shares, this holding shows a very large unrealised profit. The sum due to bankers is £240,630, associated companies seem to have lent £84,311, and sundry creditors reach £178,249. This means total debts exceeding £500,000, and since debtors owe only £38,677, cash is the attractive sum of £636, and stock-in-trade stands for £178,914, we can imagine the directors making that further issue of capital at the earliest possible moment. Happily they can state that the orders in hand will keep the works fully employed at satisfactory prices for a considerable time, and they have every reason to believe that the profits of the current year will be substantially better than in the past twelve months.

Answers to Correspondents.

Silverdale.—(1) We see no reason why you should sell these shares unless you need the money, and would strongly advise against the exchange you suggest. The financial position of No. 1 is exceedingly sound, whereas that of No. 2 is at best somewhat doubtful.

"Nopir."—We do not think you would risk much by taking the course you propose, although the shares are now at a very high price, and it may be well to wait before buying more.

"Calvert."—The corporation is in good hands, but if you buy a few shares you must regard the purchase as strictly speculative, for the company is only going through the probationary stage. Of course, it stands the chance of being very successful.

Citizen.—(1) This undertaking has been a failure throughout, and with a big debit balance against it does not seem to have much chance of pulling round. (2) The interest on these has in the past been in default, and we have no great confidence in the future, so buy none. (3) We cannot advise a purchase of these shares. (4) Moderate progress is being made, and as the bonds seem to be fairly secured, a purchase might prove profitable. (5) This company holds very favourable concessions from the Government and its prospects altogether seem decidedly good. (6) There are good people behind these, but the form which the redemption of the security will take seems to be doubtful, and on the whole we think they should be left alone. (7) This is not a very attractive security, as even at the quoted price the yield is only 5 per cent., and we think you could find a better investment to yield as much.

Headpiece.—(1) Much depends upon the price you could get them at. The company has made good progress in late years, and at a reasonable figure a few shares might be worth picking up. (2) This company's business has possibilities, and regarded speculatively a small purchase should turn out all right. (3) Fairly secure as things go. (4) Rather a declining business we fear, and not very strong financially. Still, the stock looks cheap. (5) Rather too dear.

DIVIDENDS ANNOUNCED.

MINES.

Apex.—22½ per cent.

Briseis Tin.—Bonus of 9d. per share, payable Dec. 31, making a total for the year of 3s. 9d. per share.

City and Suburban Gold.—6¼ per cent., making 10s. per share for the year, or 12½ per cent. per annum.

Consolidated Main Reef and Estate.—5 per cent. for six months ending Dec. 31.

De Beers Consolidated.—20 per cent. on the preference shares, and 35 per cent. on the deferred shares for half-year ending Dec. 31.

El Oro Mining and Railway.—1s. 6d. per share, payable Jan 16.

English Crown Spelter.—Interim of 6d. per share, on account of 1906.

Esperanza.—Interim of 6d. per share, and an additional interim of 10s. per share for quarter ending Dec. 31.

Gleneairn Main Reef.—5 per cent.

Great Fingall Consolidated.—Quarterly interim of 3s. per share, payable Jan. 10.

Hannans Land.—Third interim for 1906 of 2½ per cent. on Dec. 28.

Knights Deep.—Interim for six months ending Dec. 31, at the rate of 10 per cent. per annum, payable Feb. 13.

Langlaagte Estate and Gold.—At the rate of 20 per cent. per annum for half-year to Dec. 31.

Mount Lyell Blocks.—6d. per share.

Natal Navigation, Collieries, and Estate.—At the rate of 5 per cent. per annum for half-year ending Dec. 31.

New Primrose Gold.—25 per cent. and a bonus of 25 per cent. for half-year ending Dec. 31.

New Rietfontein Estate.—15 per cent. for half-year ending Dec. 31.

Nigel Gold.—15 per cent.

North Randfontein.—At the rate of 10 per cent., payable Feb. 19.

Porges Randfontein.—At the rate of 10 per cent., payable Feb. 19.

Robinson Deep.—Interim of 17½ per cent. for six months ending Dec. 31, payable Jan. 31.

Robinson Randfontein.—At the rate of 10 per cent., payable Feb. 19.

Simmer and Jack Proprietary.—Interim of 5 per cent. for six months ending Dec. 31, payable Feb. 7.

Sons of Gwalia.—Interim quarterly at the rate of 1s. per share.

South Randfontein.—At the rate of 10 per cent., payable Feb. 19.

Talisman Consolidated.—Sixth at the rate of 1s. per share.

United African Explorations.—10 per cent., payable Dec. 31.

Village Main Reef.—4s. per share, payable Jan. 31.

Witwatersrand Deep.—27½ per cent. for period ending Dec. 31.

Witwatersrand Gold (Knight's).—15 per cent. for half-year ending Dec. 31.

MISCELLANEOUS.

Aboukir Company.—Interim of 7 per cent. for 1906 on the ordinary and deferred shares, exclusive of the partly-paid deferred shares recently issued, and a bonus of £1 per share on the £1 ordinary shares.

Alexandria Water.—Interim of 2½ per cent.

Amazon Steam Navigation.—Interim of 2 per cent.

Anglo-Portuguese Telephone.—Interim at the rate of 3 per cent. per annum.

Assam Frontier Tea.—Interim of 3 per cent. on the preferred shares.

Attaree Khat Tea.—Interim of 2½ per cent.

Bodega.—Interim of 1s. 6d. per share on the fully-paid ordinary shares and 1s. 3d. per share on the shares £4 paid up, being at the rate of 3 per cent. per annum.

British Steamship Investment Trust.—Interim at the rate of 4 per cent. per annum on the deferred stock.

Brooke Bond and Co.—Interim at the rate of 10 per cent. per annum for half-year ended Nov. 30.

Derby Tea.—Interim for 1906 at the rate of 10 per cent.

Egyptian Delta Light Railways.—Interim of 2 per cent. for half-year ended Sept. 30 on the 5½ per cent. cumulative preference shares, payable at the current rate of exchange on Dec. 22.

Galaha Ceylon Tea Estates and Agency.—For half-year ending Dec. 31, at the rate of 6 per cent. per annum on the preference shares.

Hancock and Co. (N.Z.).—Interim of 6 per cent. per annum on the preference shares.

Howard and Bullough.—Interim of 6d. per share on the ordinary shares for half-year ended No. 30.

Hunters the Teamen.—Interim at the rate of 10 per cent. per annum.

Longai Valley.—Interim for 1906 at the rate of 4 per cent.

Main Colliery.—Interim at the rate of 6 per cent. per annum for half-year ending Dec 31

Moabund Tea.—Interim of 3 per cent. on the ordinary shares.

National Bank of New Zealand.—Interim at the rate of 10 per cent. per annum for half-year to Sept. 30.

Pearks.—Interim at the rate of 6 per cent. per annum on the ordinary shares for half-year ended October 22.

Rajmai Tea.—Interim of 5 per cent. on the ordinary shares.

Scottish American Mortgage.—Interim of 3½ per cent.

W. and T. Avery.—Interim at the rate of 5 per cent. per annum on the ordinary shares for half-year ended Sept. 30.

TRADE AND PRODUCE.

WHEAT.—On the whole the past autumn has proved a fairly favourable one for the winter crops, the slight spell of cold weather lately experienced having come just in time to prevent a too rapid growth. Farmers' deliveries last week were 75,332 quarters against 80,567 a year ago, and the aggregate for the season is now 1,075,731 quarters compared with 1,326,453. In all other countries favourable crop conditions are reported, with Australia promising a "record" yield. Dornbusch's estimate the quantity of wheat and flour on passage to the United Kingdom at 2,000,000 quarters, or 65,000 more than last week, and to the Continent at 1,805,000 quarters compared with 1,750,000. On the London cargo market Russian sorts are firmly held, and white kinds remain steady, but La Plata is freely offered. Business throughout has been inactive. American markets opened quietly with an easier tendency, but firmed up on small movements and a good demand for cash wheat. Bradstreet's estimate the quantity in sight east of the Rockies at 78,942,000 bushels against 75,378,000 last week and 65,760,000 last year.

WOOL.—Staplers are doing more than an average business considering the time of the year. There are signs of a holiday feeling in the market, but there is really no weakness in what is called the tone. Forties cross-bred tops show more firmness, in consequence mainly of the bullish cables concerning the New Zealand sales. Consumers are disposed to operate with more freedom, but top-makers are holding off. It is reported that ½d more is being paid for sixties tops on futures. Every confidence is felt in the prospects of the woollen market for some time to come. If there is any slackness apparent anywhere it is in the wholesale clothing trade, repeat orders for winter goods being scarce, owing to the mildness of the weather. Consumers are by no means overstocked with raw material, users having little wool on hand beyond what is absolutely necessary to meet current requirements. The arrivals to date for the first series of colonial wool auctions of the ensuing year, commencing on January 15, are as follows:—New South Wales, 9,885 bales; Queensland, 3,067; Victoria, 5,724; South Australia, 11,[illegible]; West Australia, 3,182; Tasmania, 6; New Zealand 2,734; Cape and Natal, 12,556; total, 49,408 bales, of which about 29,500 bales (19,000 Australian and 10,500 Cape) have been forwarded direct to the Continent, Yorkshire, &c.

LINEN.—There has been a good supply of flax at continental markets, but though the demand was strong prices show little change. In Irish yarns, however, the market has shown exceptional strength, the buying being eager and excited. Advances have been freely paid, but accepted by sellers with some reluctance and misgiving. The constantly shifting interest of buyers has again been centred chiefly on line yarns, both warp and weft, well spread over all numbers and descriptions, the most gratifying feature being the marked increase in the demand for damask yarns. The manufacturing end of the market for linens has shown increased vigour. Producers have had a larger volume of new business placed before them, and it looks as if the current production has been considerably more than accounted, thus adding to the already well foresold condition of sellers. Here and there complaints are made regarding the prices obtainable. Damasks and house-keeping goods have come in for much more attention, and though all business offered has not been accepted, still a fair amount has found its way to manufacturers' books.

COTTON (from our Manchester correspondent).—Few fresh features of moment have presented themselves during the past week, and the business doing has been of comparatively small dimensions. The demand for cloth and yarn shows signs of tapering off, and a general lack of animation is prominent at the moment. Both spinners and manufacturers continue busy with old orders, but the business coming round is rather disappointing, and the tendency is for order lists to run down. The favourable outlook for the American cotton crop, and the drooping of values may account for the holding off of buyers. Be this as it may, the production of the spindles and looms has scarcely been sold. In piece goods for export the inquiry has been of an indifferent character, and not much has been done for any market. The turnover for India is comparatively unimportant considering the usual trade being carried on. Bombay is the most healthy of the various outlets, but the total sales are small. China buyers have again bought fancy goods to a fair extent, but the offers for grey staples are unworkable. For the Levant and Egypt a miscellaneous business has transpired in various cloths. The South American outlets have been quiet for the most part. Manufacturers who use their own spinnings are more strongly fortified with contracts than makers who buy their yarn. Some producers are working at a much narrower margin of profit than a little time ago. Home trade American yarns have met with a quiet demand. Spinners are losing ground, and a continued quiet feeling must ultimately affect the margin. Shipping bundles are difficult to sell in doubled numbers, owing to the deep engagements of producers. Both spinnings are very dear to buy, and spinners, owing to long order lists, are difficult to deal with. Business has been rather restricted.

In New York cotton opened steady 7 to 10 points lower and further declined on weak cables and Wall Street selling and stop-loss orders. After a temporary rally on shorts covering and Wall Street support, the price again gave way under "bear" pressure and the situation at the end shows practically no change. The ginners' report proved to have been discounted.

COAL.—The coal market has been affected largely by the variations in the weather. When colder at the end of last week

there was a decided improvement in consumption, and orders became more plentiful in every department of the trade. There was also a stronger demand for Seaborne, but no cargoes were available. The later milder weather checked the demand, and less animation was shown at the various depôts. Inland trade has been fairly animated and merchants have had enough orders to carry them over the Christmas holidays. The outlook is considered hopeful. Since Monday 20 cargoes have arrived in the Thames. Steam coals are in good request, and the Welsh market displays much activity. Quotations at Cardiff are:—Best Admiralty, large, 16s. 6d. to 17s., f.o.b., Cardiff; Durham unscreened bunkers, 11s., f.o.b.; best West Yorkshire, 11s.

Copper.—Leading producers are said to be sold up for the first quarter of 1907, and some of them beyond, so that consumers are reconciling themselves to the present range of prices. A considerable rise in American quotations caused a strong opening and large buying orders, together with an attitude of reserve on behalf of sellers, sent values upward. The mid-monthly statistics showed a considerable increase in the visible supply, but this had no influence, and buying by the shorts as well as speculative inquirers continued. Then came a sharp break, due to profit-taking, and the fall in iron prices followed by narrow fluctuations, quotations being £106 17s. 6d. cash and £108 10s. three months. Messrs. Henry R. Merton and Co. give the visible supply as 15,058 tons, against 14,243 tons at the end of November. The supplies for the first half of December were 16,719 tons, and the deliveries 15,904 tons, making stocks in England and France 8,458 tons, against 7,618 tons at the end of November. Chile charters total 900 tons.

Tin.—Although this market has lately been affected by aggressive "bear" tactics, the undertone is considered good, and a small improvement in prices was quickly established, partly due to favourable Eastern advices. The initial gain, however, was quickly lost, and subsequently the market became rather erratic, weakening to the extent of £1, despite fairly good buying at the reduced figures. The selling pressure was maintained for two or three days, but there was a rally again before the close, prices being £195 12s. 6d. for spot and £196 5s. for future delivery.

Iron and Steel.—Speculators have shown a disposition to take their profits before the close of the year, consequently there has been a sharp decline in warrants. At one time the price dropped to 60s. 8½d. cash, a fall of 14½d. in one day. There has been no activity in G.M.B., and in a weak market the nominal price is 61s. 6d. There has likewise been a sharp break in Scotland as the result of a sudden decline in America and several weak holders have cleared out. Some thousands of tons of Cleveland have changed hands, and the price is perceptibly lower. A large option business has been done. It is said that the fall in warrants there has not yet affected the legitimate position, makers being well sold forward, but it may ultimately lead to consumers holding off. Towards the close of the week the market shows a tendency to become firmer, on a sudden American inquiry. In the Midlands the tone is strong, with a good demand for the latter part of next quarter. Buyers seem to fear the possibility of an advance before the end of that period.

Tea.—The final sales for 1906 were marked by exceptional strength for the time of year in both Indian and Ceylon teas. Supplies from India were some 9,000 packages smaller at 37,052 packages, and Messrs. W. J. and H. Thompson report that this reduction was sufficient to improve the tone for all teas under 8d. per lb. Common leaf qualities, as in previous weeks derived most benefit from the activity, and a further advance of ¼d. per lb. was secured for fair black Pekoe Souchongs. Useful sorts about 7d. were also in demand, but for teas from 9d. upwards the inquiry was less pronounced. The average for the week was 8.08d. against 7.97d. a week ago, and 6.92d. in 1905. In Ceylon sales there was also a further strengthening of the demand for useful liquoring grades up to 8d., and Pekoe Souchongs from 6d. to 7d. per lb. were particularly well competed for. Even with the present shortage in available supplies, however, several parcels of very coarse leaf had to be withdrawn at 3¼d. per lb. Teas above 9d. were again irregular, and a good deal of these also was withdrawn as prices offered were nearly 2d. below those ruling a month ago. The average was practically unaltered at 8.65d. compared with 8.66d. a week ago and 7.65d. a year ago. No sales of Java were held this week, nor will there be any until early in the New Year.

Sugar.—The revised estimates show that the European surplus of 129,000 stocks on October 1 has been changed into a deficit of 50,000 to 60,000 tons, owing to larger beet exports and diminished production; the deficiency would have been larger, says Mr. Czarnikow, but for a falling off in consumption. These beet exports, however, are mostly based upon declarations, not shipments. Holland can hardly have exported 92,000 tons of Dutch sugar against 61,000 tons in two months, yet after deducting present stocks and consumption from initial stocks and production, 92,000 tons of Dutch have disappeared, partly no doubt into private stores, refineries, &c. After a further decline from 9s. 1½d. to 9s. 0¾d. for May, a moderate recovery set in to 9s. 2¾d., principally on better demand from German refiners, and though trade here remains very stagnant, refiners bought a little at 8s. 9d. to 8s. 10½d.; speculators likewise showed more disposition to operate. Second runnings 80 per cent. sold at 7s. 4½d. to 7s. 6d. Tate's cubes are unchanged at 18s. 9d., standard granulated at 16s. 10½d., Lyle's No. 2 moved from 16s. 3d. to 16s. 4½d.; Hamburg granulated December from 10s. 6d. to 10s. 3d. to 10s. 5¼d., May-August from 10s. 11¼d. to 10s. 9½d. to 10s. 10½d.; Paris from 26.87 francs to 26.50 francs to 27 francs, to 26.87 francs (11s. f.o.b.), March-June from 27.87 francs to 27.50 francs to 28.06 francs to 27.87 francs (11s. 5¼d. f.o.b.); Hamburg beet December from 8s. 9¾d. to 8s. 8d. to 8s. 9¾d., January-March from 8s. 11½d. to 8s. 10d. to 8s. 11¾d., May from 9s. 1½d. to 9s. 0¾d. to 9s. 2¾d., October-December from 9s. to 8s. 11½d. to 9s. 0½d. The New York market was very steady during the early part of the week, but has since become dull, as usual when Cuban sugars begin to appear, and buyers decline to make further purchases of sugars to arrive except at a reduction in price. It may be that the stringency of money, too, has adversely affected the sugar market in common with other Wall Street interests. The quotation for spot Centrifugals remains 3.82 cents equals 9s. 8d. for non-preferential 96 per cent. equals about 8s. 7½d. f.o.b. Hamburg for 88 per cent. The landings for the week in the three ports were 36,000 tons, and meltings 32,000 tons, leaving stocks at 135,000 tons.

MINING RETURNS.

Battlefields (Rhodesia).—Crushed 1,370 tons, 863 ozs.; cyanide 860 tons, 573 ozs.

Brilliant Central.—Crushed 1,350 tons quartz, value, including residues, tailings and concentrates, £3,750.

Briseis Tin.—Briseis, black tin cleaned up 36 tons 12 cwt.; New Bros. Home No. 1, black tin cleaned up 32 tons 2 cwt.; Briseis, proportion output 105 tons 4 cwt. Average total sluiceheads of water available from all sources 156.

British Broken Hill Proprietary.—2,387 tons crude ore produced 389 tons concentrates, containing 233 tons lead and 10,503 ozs. silver.

Chinese Engineering.—Output of coal 18,000 tons, sales 22,000 tons, consumption 1,575 tons.

Day Dawn Block and Wyndham.—Treated 1,630 tons quartz, value £7,300.

Durban-Roodepoort.—10,755 tons, 270 ozs.; tailings 7,860 tons, 996 ozs.; slimes, 3,360 tons, 208 ozs.; total, 4,474 ozs.

El Oro.—Crushed 20,242 tons of ore, producing $175,865.

Great Cobar.—11,820 tons; output matte, 990 tons; contents: 348 tons copper, 590 ozs. gold, 6,000 ozs. silver, despatched ingot copper 427 tons, made 365 tons

Hyderabad Deccan.—Output of coal, 33,709 tons.

Kelantan Gold Dredging.—Recovered 135 ozs.

Mills' Day Dawn United.—2,118 tons of quartz, value, including residues, £8,200.

Mount Lyell Blocks.—Treated 6,320 tons crude ore, for 59 tons 10 cwt. fine copper.

North Broken Hill.—Treated 2,080 tons crude ore producing 350 tons concentrates, containing 247 tons 5⅛ cwt. lead and 6,335 ozs. silver.

"O. K." Copper.—Treated 758 tons crude ore, producing 73 tons fine copper.

Ouro Preto.—6,447 tons ore produced 2,113 ozs.

Palmarejo and Mexican.—Zapote—Crushed 3,256 tons; treated 2,500 tons, producing gold $13,200, silver $40,390

Prestea Block A.—Crushed 6,663 tons, 2,900 ozs.; cyanide, 3,980 tons; tailings, 1,058 ozs.; total, 3,958 ozs. bullion.

Rice-Hamilton.—Sabiwa—Crushed 5,182 tons, 521 ozs.; 2,429 tons by cyanide, 519 ozs.

Salisbury.—Crushed 4,950 tons, 1,620 ozs.

Sansu.—Crushed 2,240 tons, value £2,750.

Tanganyika.—Ruwe—Output for October 248 ozs. gold.

Victoria Proprietary.—Crushed 535 tons, 198 ozs.

Waihi.—Crushed 26,888 tons of 2,000 lbs., yielding £62,930.

NEXT WEEK'S MEETINGS.

Thursday, December 27.

Cargo Fleet Iron.—Middlesbrough, 2 p.m.
Canada Co.—1, East India Avenue, 1.30 p.m.
Investors' Mortgage Security.—Edinburgh, noon.
Land and Loan of New Zealand.—3, Great Winchester Street.

Friday, December 28.

Accident Insurance.—Cannon Street Hotel, noon.
African and Australian Co.—Winchester House, 3 p.m.
Cobar Gold Mines.—Winchester House, 11.30 a.m.
Freehold Assets Realisation.—Glasgow, 11 a.m.
Ponting Bros.—Winchester House, 11.30 a.m.
Solderless Tin.—Winchester House, noon.
Singer and Co.—Coventry, noon.

The *Financial Review of Reviews* has sent us a neat bookcase, designed to hold a complete year of its publication, with the months printed across the top shelf in such a way that any particular number can be picked out with a minimum of trouble. For those who file the magazine the bookcase will prove a handy adjunct to office or study.

A society has been formed for the purpose of financing the village co-operative credit societies affiliated to the Agricultural Organisation Society, and has just been registered under the Industrial and Provident Societies' Act, with the title of "The Central Co-operative Agricultural Bank, Limited." The signatories to the application for registration, who will form the first board of directors, are the Marquess of Zetland, the Earl of Stamford, the Earl of Coventry, Lord Lucas, the Hon. T. A. Brassey, the Hon. W. F. D. Smith, M.P., Mr. Hugh Andrews, Mr. R. N. Sutton Nelthorpe, the Rev. T. H. L. Jellicoe, and Mr. R. A. Yerburgh The registered office is at Dacre House, Dacre Street, Westminster, S.W., and Mr. J. K. Montgomery has been appointed secretary pro tem.

COMPANY MEETINGS.

CORPORATION OF WESTERN EGYPT.

The second ordinary general meeting of the Corporation of Western Egypt, Limited, was held on Saturday last, at the registered offices of the corporation, 115, Victoria-street, Westminster, S.W., Major-General Sir John C. Ardagh, K.C.M.G., K.C.I.E., C.B., R.E. (the chairman), presiding.

The Secretary (Mr. Alfred W. Deering, F.C.I.S.) read the notice convening the meeting and the report of the auditors.

The Chairman: Gentlemen,—In rising to move the adoption of the report and accounts now in your hands, and which, I presume, you will accept as read, I will express to you my trust that the confidence hitherto accorded the board may continue to be reposed in it, now that it has been enlarged by the inclusion of myself and Mr. Dames Longworth, a very large shareholder, who has had great experience in the management of landed estates, and whose counsels I have no doubt will prove of great value to us in the management of the affairs of the Corporation. The success attendant upon the promotion of land companies in Egypt is one of the most striking of recent financial phenomena; but I beg you to note that, whereas most of these companies, even the most successful, have paid a heavy price per feddan for the acquisition of their lands, we, on the other hand, being early in the field, have secured our immense grants, aggregating no less than 600,000 feddans of cultivable land, at a price which, even if we omit altogether the important railway and mineral rights also included in the purchase price, does not work out at more than 5s 7d. per feddan. In other words, had we been capitalised on the same basis as the companies I refer to, the necessary capital would have run into many millions of pounds. A glance at our balance-sheet will show that the cost of our lands being almost a nominal amount per feddan, we have been able to devote large sums to railway construction, and so secure a tangible asset of very great value—a value greatly enhanced by the Government guarantee of interest in connection with it. I think you must have felt, in reading the report, that an eminently satisfactory amount of work has been effected during the year under review. The main difficulties of construction of the railway, which is so vitally necessary for the purpose of placing our extensive lands within easy reach of the Nile Valley, have been successfully surmounted, and a very rapid rate of construction may now be looked for. Indeed, when the manufacturers have given delivery of the sleepers for use in connection with the rails already on the spot, and these have been laid, only some 15 kilometres (less than ten miles) will require to be covered in order to arrive at the oasis itself. The balance of the permanent way material will go forward early in the new year, and we may confidently assume that within a very few months the line will be completely laid. As you are aware, all the rolling stock, with the exception of the passenger coaches, have already been delivered, the total sum actually spent on railway construction being close upon £100,000. You will realise that the necessary railway expenditure is well laid out when you reflect upon the importance of the line in its bearing upon the lands now in process of development. The completion of the railway will render these lands saleable at prices which should give an immense return upon the capital expended—a return, too, practically assured when the oasis is reached by the railway and sales of the new lands are commenced. You have doubtles read with interest the statement on land values made by Mr. Beadnell and printed at the end of the report. This statement, based upon expert knowledge, shows that we had greatly underrated the saleable value of the lands. He gives as a conservative estimate the value of the first-class land at £30 to £40 an acre, and £15 per acre and upwards for the remainder. The cost of irrigation under normal conditions will be some £5 per feddan, and the difference between the cost of irrigation and the price of sale will be the net profit to the corporation. Our lands, as you are aware, are irrigated by artesian water, of which there is an abundant supply, and their value, both for cereal crops in general and for cotton growing in particular, has been sufficiently evidenced by the operations of the past season, the operations having conclusively shown that the ancients were fully justified in speaking of the oases as being "specially celebrated for their fertility." The oases themselves until recent years have been left disregarded solely owing to their severance from the rest of Egypt by the Libyan Desert. They cover a very large area; indeed, the operations of the Corporation, including the railway, comprise an area of no less than 74,000 square miles. The amount expended to date on land development is some £40,000. In addition to these lands, which alone would more than justify the existence of the Corporation, we hold mineral and other rights of the utmost value. Earthy minerals—cobaltic aluminous deposits, ochres and phosphates—abound through the oases. Many hundreds of tons have been extracted and stacked, and leaching operations, preparatory to export, are in progress. The various aluminous and ochreous beds which have been located are being carefully surveyed in order that, when the means of transit are to hand, no time may be lost in utilising to the fullest extent these important sources of revenue. I need hardly remark that our unique position in relation to the oases will give us a practical monopoly of the whole of the trade of this portion of Egypt. Our general expenditure from the time of the inception of the Corporation, less receipts, shows the modest sum of about £6,000 only to be written off pior to the declaration of a dividend—a figure of comparative insignificance when the revenue account is opened in the near future, since it is probable that the sale of one year's grants may repay the whole of the paid-up capital of the Corporation. In conclusion, the chairman formally moved the adoption of the report and accounts. This was seconded by the Hon. W. T. O'Brien and carried unanimously.

The Hon. W. T. O'Brien and Mr. C. Macville were re-elected directors and Messrs. W. B. Peat and Co. were reappointed auditors.

A vote of thanks to the chairman and directors closed the proceedings.

SAN FRANCISCO DEL ORO MINES.

The second ordinary general meeting of shareholders of the San Francisco del Oro Mines, Limited, was held on Tuesday, at Winchester House, Old Broad Street, E.C., the Earl of Denbigh (the Chairman) presiding.

The Secretary (Mr. Harold A. Searle) having read the notice convening the meeting and the report of the auditors,

The Chairman said: Gentlemen,—I will ask Mr. Walter Maclachlan, one of our directors, to propose "That the directors' report and statement of accounts be and are hereby approved and adopted." That is a motion which ought by right to come from the chair. The reason why I do not propose it myself is that I happen to have been laid up during the last few days with the fashionable epidemic of influenza, and until this morning I did not know whether I should be able to attend this meeting or not. I therefore sent my notes of what I intended to say to the board and asked them to arrange for someone to take my place, and on arriving here at the last moment I find that Mr. Maclachlan has embodied the remarks which I sent him into a speech, and therefore I hope you will forgive me if I ask him to deliver it instead of myself.

Mr. Walter Maclachlan, in the course of his lengthy address, said:—As you will observe from the accounts, the net profit for the year under review is £25,880. The balance of profit from the previous accounts was £24,320, making altogether £50,201 to be dealt with. Of this we have written off £25,022 for depreciation and development, thus leaving £25,179 at the credit of our profit and loss account. (Applause.) Although this amount is at our credit it is not available for dividend purposes, as we have been obliged hitherto to put all our profits back into the mine owing to the insufficiency of working capital, from which the company has suffered from the start. About £75,000 of profits have gone back into the mine in this way. Within the past few weeks, however, this matter has been entirely remedied, and we have been able to conclude certain arrangements which place the company in a very satisfactory position indeed as regards its cash resources. (Applause.) Fifty thousand of the reserve shares have been subscribed for on terms which will not only enable the company to complete in its entirety the policy which the board decided to carry out in developing 500,000 tons of ore, but will also go a very long way towards meeting the cost of the extensive reduction and treatment plant, which it is our intention to erect on the mine. In stating this I am leaving out of account altogether any addition to our cash resources which may be derived from the sale of ore to the smelters. (Applause.) As most of you are doubtless aware, our income has so far been entirely derived from the sale of crude ore to the smelters, 51,368 tons having been dealt with in this manner. This, however, is an unsatisfactory way of dealing with our ore, as we get paid for only a comparatively small proportion of its mineral values, and the future of the property will depend upon the treatment of the very large tonnage of payable ore which the mine has been proved to contain, and which will be dealt with on the spot by the mill and extraction plant which are about to be installed. At the same time, it is very gratifying to learn that the most recent developments at the mine have disclosed the presence at the fourth level of a body of very high grade ore, which is available for sale to the smelters as soon as we consider it advisable to resume these sales. About a fortnight ago reports were published in certain newspapers in this country, who at the present time have a special correspondent in Mexico, to the effect that rich ore had been struck in the mine. After waiting for a day or two the directors called the attention of the manager to the subject, and we were very much gratified to have a cablegram in reply to the effect that these reports were true. (Applause.) From that and the subsequent letters we have received from our manager, which were written when he was just on the point of opening up this rich ore body, we now know that what was fully expected to be the case has happened—that is, the rich ore which was found in the reef in the upper levels has been found to exist in the fourth level also, and we have no doubt we may look for very considerable profits from dealing with that body of ore. Some shareholders have remarked to me on the subject of the news of the strike not having come in the first place from our manager instead of through the Press. The reason of this, I take it, is that our manager, like the cautious and conservative man he is, preferred to do a certain amount of work on this rich ore, so as to more completely satisfy himself with regard to its extent and value before committing himself in any report to us on the subject, and for my part I thoroughly commend him for doing so. (Hear, hear.) Having had this explanation you will, I am sure, attach all the more importance to and be all the more pleased with the latest report from Mr. Hyslop, our manager, which shows that after a week's further working in this rich ore the high values which it at first carried are more than maintained. (Applause.) It is too soon yet to say much about this strike—

NOTICES.

THE GLENCAIRN MAIN REEF GOLD MINING COMPANY, LIMITED.

NOTICE IS HEREBY GIVEN that a Dividend of Five per Cent. (5%) has been declared, payable to all shareholders registered at the 31st December, 1906.

THE TRANSFER BOOKS will be closed from the 1st to the 8th January, 1907, both days inclusive

The Dividend Warrants will be posted as soon as the London and Johannesburg Share Registers have been agreed.

By Order,
JOHANNESBURG CONSOLIDATED INVESTMENT COMPANY, LIMITED, London Agents.

The Investors' Review

EDITED BY A. J. WILSON AND SON.

Vol. XVIII.—No. 469. SATURDAY, DECEMBER 29, 1906. (Registered as a Newspaper.) Price 6d.
New Series.

PUBLISHER'S NOTICES.

The Investors' Review is a Subscription Journal, and will be delivered to subscribers in London by the first post, or sent to the country and abroad by the first mail, on Saturday Mornings on the following terms:—

One Year - £1 1s. Six Months - 11s. Three Months - 5s. 9d.

Short of Three months the Price is **6d.** per Copy *Inland*, and **6½d.** *Abroad, Post Free.*

Subscribers can change their address as often as they please, but notice of change must reach the Publishing Office not later than the First Post on Friday Morning.

For a fortnight before the Subscription expires the **Investors' Review** will be forwarded in a different coloured wrapper.

Cloth cases for binding the Half-Yearly Volumes price **1s. 6d.**, postage **4d.** extra. Bound Volumes **16s. 6d.**, or **17s. 3d.** post free.

Cheques and P.O. Drafts should be made payable to

CLEMENT WILSON,
"Investors' Review" Office,
Norfolk House, Norfolk Street,
London, W.C.

Investment Queries.

Questions about Public Securities will be answered each week in the **Investors' Review** on the following terms:—

For each question thus answered the charge will be **One Shilling.** Where more than One Question is put they should be numbered, and a copy kept. No Security is ever named in the Answers Printed.

Private Letters giving fuller answers can be had if desired The minimum charge for such letters is **Ten Shillings** each; but for that Three Questions will be answered. For all additions beyond three the charge will be **Half-a-Crown** per query.

Lists of Investments furnished by correspondents will be annotated, or new lists of suggested investments will be supplied on the same terms, viz.:—**10s.** for the First Three, and **2s. 6d.** for each Additional one. But no group of securities forming a trust calculated to yield a given income will be supplied for less than **One Pound.**

The charge for Wires about New Issues appearing on days that prevent timely criticism in the **Investors' Review** will also be **2s. 6d.**, plus a prepaid telegram form.

The Editors cannot undertake to return rejected communications.

Letters from correspondents must, in every case, be authenticated by the name and address of the writer.

The Editors desire it to be understood that a charge is made for the insertion of reports under the heading of Company Meetings, and they cannot accept responsibility for statements made therein.

The Investors' Review.

The Argentine Railway Position.

Having completed the individual analysis of the Argentine railway reports issued during the past few weeks, we may now follow our usual custom and offer a few remarks on the general prospects of Argentina and the position and future of the railways. It is pleasing to be able to say that, on the whole, the flourishing condition of the country has experienced no set-back during the past twelve months, and present indications are that the year now current will witness further progress, with substantial benefit to the various railways. With such a vast country it is, of course, not to be expected that all parts of it can experience uninterrupted progress, and now and then we shall have to give prominence to some reaction in this part or that, due, perhaps, to unseasonable weather, such as excessive rain or frost, or possibly drought; and we must not overlook the fact that after several years of exceptional freedom the country is again being bothered with the locust pest. The visitation has not wrought very much damage, so far as one can tell, and it may be that the measures adopted to combat the plague will render impossible the complete disasters to the crops which at one time were all too common. For some time past there has been universal complaint of a shortage of labour, the tremendous tracts of land put under cultivation being far in advance of the labour capacity of the country, but with the high standard of wages which now prevails no doubt this difficulty will in due course be rectified. We know that in the past year the number of immigrants reached 91,000 against only 37,000 leaving the country so that there was a nett gain of about 54,000. The area of land now under cultivation is probably greater than ever before, and as new districts are being steadily opened up by additional railway accommodation there is scarcely any limit to the progress possible in this direction.

Take them altogether the crops gathered during the past year were highly satisfactory. One railway company may report a decrease in the carriage of grain; another a drop in the maize traffic; and a third a set-back in linseed; but it is always possible to turn to other statements and find that what one company loses another gains, and in the aggregate the traffic is undoubtedly continually progressive. This is proved by the fact that seven leading railways of the Argentine—six of them reporting for one year and the other for six months—gathered a gross revenue of over 10½ millions, or an increase of more than £1,600,000 compared with the previous twelve months. The live stock traffic was rather inclined to shrink, and it is probably inevitable that as agriculture increases the pastoral industry will have a tendency to grow smaller. Drought and sundry other causes helped to adversely affect the cattle business in the past year, but the most important influence was the tremendous number of animals killed at the freezing stations for exportation. A good many authorities incline to the opinion that this kind of business is being rather over stretched, and that the flocks are being depleted at a too rapid rate, but the country cannot have it all ways and improvement in one class of industry must sometimes lead to a falling-off in another. Fresh industries, however, are springing up in various parts of the Republic, and on all hands the steady progress in dairy

produce is singled out for special mention. Another good sign is the much larger carriage of building materials, general goods, and consumable merchandise into the interior, as there could be no better indication of the prosperity of the country than a growing demand for such commodities. On all the railways now under consideration the weight of goods carried during the past year was almost 13,400,000 tons, an increase of more than 2,000,000 tons, and the number of passengers carried was £22,500,000, being in this case an improvement of nearly 8,000,000.

Improved facilities are being offered to the travelling public, partly because the companies are finding their business somewhat interfered with by tramway competition, and partly because the larger number of people whom the prosperity of the country enables to travel is rendering the passenger movement more profitable. It, however, need hardly be said that the huge and ever-growing traffic cannot be handled without very great additional expense, and the cost of moving last year's goods and passengers was larger by no less than £1,290,000, the aggregate expenditure of the railways being fully six millions. Every company finds that great improvements are necessary on the lines in the way of doubling the tracks where there are only single lines, the provision of further stations and sidings and greater accommodation at the various termini. The sudden rise in trade also found the companies very short of rolling stock, and during the past few years every one has been putting forth stupendous efforts to make good the deficiency. Large sums of money have also been spent at the various ports to which the railways run, and at Bahia Blanca alone, which many think will in due course become the leading outlet of the country, the outlay during recent years must have reached many millions. In fact, it is only the colossal expenditure incurred in the past and apparently still imperative which renders us at all anxious about the future of Argentine railways from the standpoint of the investor. For this reason, we are by no means inclined to agree with those who view with misgiving the steady increase in the ratio of working expenses to gross income. Prosperous times should always be taken advantage of to spend lavishly on the upkeep of the systems, and, although there is no reason to anticipate any serious reaction in trade and industry, the companies must in the future derive benefit from any relief to the capital account which can be rendered from the steadily expanding revenues from traffic.

Perhaps the most potent cause of the rise in working expenditure is the increase in the cost of labour. For some time past the general managers and representatives of the various companies in the Argentine have never ceased to complain and grumble at the steady growth in the item of wages, but when labour is short and business good wages must always have a tendency to increase. Moreover, for reasons not very easy to define, the cost of living in the Argentine has lately advanced at such a rate that a crisis of some kind is freely predicted. This is not a little strange in a country which produces such vast quantities of consumable commodities, but it seems that high rents in and around the larger centres of population have led to a very large increase in the cost of the ordinary necessaries of life. Taxation is likewise exceedingly high, and we think the companies are gradually recognising that without the big wages they are now called upon to pay they would not be able to command the labour market, simply because the employees would find it difficult or impossible to live. No particular savings on account of expenditure can, therefore, be contemplated, especially as the growing needs of the country have rendered necessary a very important change in the methods of handling goods traffic. Hitherto heavily-laden but slow trains have carried the merchandise, but traders now demand much quicker transit so that smaller amounts can be moved by each train. It is easy to see that this adds largely to the expenses. But so long as traffics steadily expand the extra cost should be provided without in any way affecting the position and prospects of the shareholders.

Capital expenditure during the past year reached a scale which might alarm even the spendthrift directors of English railway companies, but tolerably good value appears to be obtained for the money laid out, and many of the companies have projects on hand which ought to lead to important future developments. In the north, the Buenos Ayres and Pacific, together with the Argentine Great Western Company and the Argentine Transandine Railway, is linking up the two sides of the South American continent, and before long there will be a continuous line of railway from Buenos Ayres to Valparaiso. A similar enterprise is being undertaken in the south by the Buenos Ayres Great Southern Railway, which is contemplating the construction of a line to the Chilian frontier to join up there with another system at present under construction by the Chilian Government. Thus there will be a direct transcontinental route for the southern portion of the Argentine Republic, as well as for the northern. What these lines mean in the way of capital outlay may be judged from the fact that the Great Southern Company is increasing its capital by no less than £5,000,000, of which £3,000,000 has been already issued, and the Buenos Ayres and Pacific Company a little while ago raised capital to the amount of two millions. The Bahia Blanca and North-Western Railway, which is now controlled by the Pacific Company in order to give it access to the port of Bahia Blanca, is raising large sums, and the Buenos Ayres Western Company has recently obtained authority for the creation of an additional three millions. When, however, we look at the company's weekly traffic statements, and find that increase is piled on increase, so that leading lines disclose improvements for the current year of anything between £80,000 and £500,000, there is no reason to suppose that the great works undertaken are not the outcome of careful and prudent consideration, and if the policy of helping the capital account in all ways from the general income is pursued, there is hope that this great expenditure will not prove too burdensome should a period of depression again come over the Republic.

Mr. Adam Block's Report on the Ottoman Public Debt.

Perhaps if the Commissioners or men in possession on behalf of the foreign creditor of the Turkish Empire could get the entire administration of the country into their hands they would be able to evolve prosperity just as the British administration of Egypt has done, but as matters stand we fear the undoubted success with which this Commission administers the assigned revenues does not conduce to the happiness of the Turkish people; and the restored credit, if the term may be used, that has resulted from the regular payment of the arranged and reduced interest charges upon the various categories of the old Turkish debt has had the untoward consequence of facilitating fresh borrowing on the part of the Sultan. For a long time after this Commission was established very little was done in that way, because people did not believe in the stability of the arrangement, and the memory of Turkish discredit was too recent; but the Sultan has more and more leaned upon loans in recent years. Surpluses in the hands of the Debt Commission, gathered up after meeting the fixed charges on the debt, have been utilised as security for fresh loans, and the consequence is that within the last five years Turkey has borrowed £10,000,000, whereas in the preceding nine the Sultan contented himself with £2,500,000. No wonder, therefore, that Mr. Adam Block, the writer of this report and representative of the British and Dutch bondholders on the Council of Administration of the assigned revenues, has to admit that the internal finances are already overstrained, and Turkey has had to borrow at considerable sacrifice "to enable the Commission to carry on its work." In plain English this Debt Commission, representing the foreign

creditors, the men in possession, while they may not fleece the Turkish people as the old and irresponsible officials of the Sultan did, are instrumental in adding to the already intolerable load these people have to struggle along under. It is little use, therefore, talking about the financial stability and welfare of the country while maladministration and growing debt hinder the people at every hand, and we hope British investors will continue to look askance upon Turkish securities notwithstanding the fine profit made by the foreigner, as Mr. Block complacently reminds us, through his readiness to buy Turkish Unified and other speculative bonds of that kind at much lower prices than now rule. After all the improved credit of Turkey is based upon an enlarged capacity to borrow, not upon any real improvement in the condition of the people.

One has only to look at the various sources of revenue placed in the hands of the Commission to see how poor the country must be. First comes the salt revenue, which produced last year £T11,037,586, or £T87,693 more than in the preceding year. But this increase is due to increased price. The Government last year wanted to raise the selling price by 5 paras, and although this was humanely opposed by Mr. Block and his colleagues, as well as by many Turkish officials, an increase of 1 para was made in the impost, which accounts for £T55,564 of the just mentioned increase. The "stamps" revenue may be passed over, as it seems legitimate enough and might be considerably augmented if carefully controlled. Last year it gave £T439,264, or nearly twice what it yielded in 1893-4. The revenue from spirits, from viticulture, from fisheries, and silk might all be looked into with advantage perhaps, if we had space, but we can only mention the tobacco monopoly, which last year gave £T825,474 to the Council of Administration. That it does so little is proof of the extent to which smuggling still goes on. The monopoly company, or tobacco régie, is not popular, and nobody smokes its tobacco who can get contraband. It makes no profit either, but a loss upon its exports, and Mr. Block calculates that out of a population of between 30,000,000 and 40,000,000—nobody knows what the population of Turkey is, but we should deem this figure much in excess of the facts—the whole production of the régie is consumed by about 1,500,000 people. All the rest smoke contraband. Is not that an eloquent testimony to the absence of anything like efficient, settled, or orderly government within the Sultan's dominions? Still the revenues continue slowly to expand, and the increase of 3 per cent. in the Customs duties may add something to the funds available for the further loans to be raised by Abdul Hamid if he lives.

An interesting note early in the report also in one way illustrates the remarkable backwardness of the country. We have lately seen a large amount of gold going out of the Bank of England to Constantinople, and Mr. Block gives a table that reveals import transactions by the Ottoman Bank alone aggregating £T6,906,000 in the past five years down to October 16 last. In the last of these years the import was £T2,763,554. What is done with this money? Mr. Block says it is hoarded. The Turk does not, as a rule, invest his money or bank it. He either buys land and builds, or else he puts it into his safe. Much building has gone on, but not anything like enough to account for such a consumption of the yellow metal. Still, it may indicate a certain amount of freedom from arbitrary exaction that the people should be even hoarding their gains. And the trade of the country does expand in a slow, hesitating way, for the note circulation of the Imperial Ottoman Bank has gradually increased, much, however, of that also being hoarded.

As to the actual facts relating to the assigned revenues and their spending, a word may be added. Last year ended March 13 the entire revenue collected by the Debt Commission came to £T3,230,074, which sum was obtained at a cost of £T522,517. The various debt services absorbed £T2,157,375, and £T50,000 were disbursed for the retrocession of the *reftieh*. The surplus left was accordingly £T500,182, of which the Sultan took £T375,136, or 75 per cent., and the Public Debt Commission the remainder, £T125,045. This looks flourishing enough, but the necessitous Government is continually devouring the economies and careful scrapings of the Debt Commission, and it is calculated by Mr. Block that at the end of the fiscal year 1907-8 there will only be £T30,675, less interest, remaining as free revenue. The burden imposed by fresh loans is continually swallowing up the extra money that the Debt Commission collects, and we doubt whether Turkey is getting much good from these loans. A little progress, however, is made, and Mr. Block reminds readers that 30 years ago there were only 1,230 kilometres of railways in the Turkish Empire, whereas now there are 5,474 kilometres, with another 4,234 building or to be built, including the 1,066 for the Hadjiz Railway to Mecca and 1,800 kilometres of the Baghdad Railway. Mr. Block estimates the entire revenue of the Empire at £T23,000,000, of which 24 per cent. is collected by the Debt Commissioners, but he candidly enough admits that this is a mere guess, and we should deem it a considerable exaggeration. More than that sum may be taken from the people, but nothing like so much reaches the Sultan's Treasury. It may be added that last year the assigned revenues increased by £T174,802, or 5·74 per cent., while the expenses came down by £T10,068, or 1·90 per cent., and the Commission is not without hopes of effecting further savings on minor outlays.

Is This a Practicable Suggestion? No. V.

We fear the answer must be—it is not. After turning over the suggestions so kindly made by many correspondents and discussing them from every point of view, we have been reluctantly impelled to the conclusion that we cannot undertake to do much, if anything, more than we have hitherto done. Our frank and unbiassed advice is always at the command of subscribers and readers, and some years ago we reduced the fees charged for this advice to a scale so low as to be really unremunerative, except on the basis of a much larger volume of business than has hitherto come our way. As we have often said, the general public appears to prefer to be misled by the gratuitous and interested tips of circularising "share pushers" and financial gentlemen of the road, and a few only of the victims of these depredators come to us, as they go to their lawyer, when they have made a mess of their stock jobbing and margin or option gambling. Nothing that we could offer to do would help these folk. This week, for instance, we have received a sad letter from a subscriber, saying that he must give up THE INVESTORS' REVIEW, because he has lost so much money by Pekin Syndicate shares. Now, he could not possibly have lost his money if he had attended to the criticisms of this enterprise offered from time to time in THE INVESTORS' REVIEW. It alone would have protected him, but if he had had any doubts when tempted to buy at a high price, a very small fee sent to us would have brought him a caution that should have prevented him from losing his money if attended to.

After all, is it so very great a hardship to holders of public securities to ask them first to read carefully the full and perfectly impartial criticisms of THE INVESTORS' REVIEW, and then, if they want more light, to write to us? That we should step beyond the limit now fixed, and undertake to advise beforehand, to thrust upon people counsel as to what they should sell or what they should buy, could only result in disappointment all round, and in infinite and intolerable worry to us. We are not infallible by any means, nor are we able to interpret the purposes of our various subscribers by inspiration or to measure their reasonableness. If a security went wrong after we had volunteered the advice to buy—advice given in all good faith and without the slightest pecuniary interest of our own—we should be blamed by ninety-nine persons

out of every hundred who had acted on that advice, no matter how well grounded it might have been when given.

For this and other reasons, we cannot see our way appreciably to enlarge the scope of the work hitherto undertaken by us. That work now embraces not only replies in the Review to questions put to us by correspondents, but also replies by private letter and the compiling of private trusts to guide individual investors in their selection of securities, as well as the occasional or periodical overhaul of lists of investments submitted to us. The only other step we can see our way to take is to resume, when the right times comes, the publication of model trusts in the columns of The Investors' Review. These were stopped some time ago, not because somebody grumbled about a fall in his mine shares, but because we foresaw the approach of the financial crisis that now hangs over our market—over all markets—and until that crisis either breaks or shows definite signs of passing away, the compilation of trusts for publication has been suspended. It could only be ungrateful and often unprofitable labour in present circumstances. There may not be a general, world-wide, and wealth-blighting fall in the prices of marketable securities of every class, but a shrinkage there is bound to be, and we prefer to wait until we can see indications of a break in the clouds now enshrouding the world's finance.

One other concession may be possible. Apart altogether from questions of expediency, we have never been able to see our way to publish in The Investors' Review the names of securities inquired about by correspondents, because our relation to the inquirers seemed to us to be confidential. We had no right to blazon the names of their possessions every Saturday, possibly to their injury; but there appears to be no valid ground of objection to a plan whereby early in each following week a key to answers might be systematically distributed to subscribers willing to pay a guinea a year for it No clue would be given to the identity of the original inquirer, but the names of the things asked about would be furnished in an order corresponding to the order of the published answers in the previous week's issue, so that each one could ascertain for himself the full meaning of the remarks made.

May we once more say, in conclusion, that we are very grateful to those subscribers and readers who have taken the trouble to write and make suggestions to us, and if it had been possible we should have been only too delighted to go forward in the direction many of these correspondents indicate. We cannot see our way to do this, and must be permitted to hint that much of what was suggested will probably seem unreasonable to the writers when calmly thought over by them. As we said last week, it is not possible for us to act as a universal Providence to those who have money to lay by, and who often allow that money to slip through their fingers in a manner that always seems to us marvellous. We constantly see men who have displayed remarkable astuteness in business, great diligence and vigilance in looking after their interests, yet who, when they have gathered together a competence or more, allow adventurers of every description to plunder them. The touting, circularising broker, with his persuasive balderbash and affectation of market foreknowledge and omniscience, entraps them at every turn; because they are ignorant, because they are self-confident, or because they are esurient. Surely we are not stepping beyond the lines laid down when this paper was founded in suggesting to these people that it would be better for them, when courted by the circularising philanthropists, to come to us before yielding to temptation, and sometimes even to miss a possible chance of profit rather than continually run the risk of incurring loss—often grievous loss. This is the only journal in existence that has ever attempted clean-handedly to protect the unsophisticated possessor of wealth from the depredations of the commission hunters and chasers after illegitimate profits. Why not make use of it fully on the lines already laid down? "Oh, you 'crab' things so." Yes, we tell you the truth.

To the writer of the appended letter signed "Nemo II." we are especially indebted, because he, like the subscriber in Cairo whose letter we printed last week, not only gives good counsel, but has taken the trouble to annotate the previous correspondence in a way that served to clinch our resolution not to go beyond the lines indicated above. On some points, though, he misapprehends us. We do now take deposits against future queries, and keep them apart from all other moneys coming into the office. Also we, like the writer, have always regarded the analyses of company reports as the most useful and permanently valuable portion of the Review, *but it is the portion that a large section of its readers appear never to look at*. That is our gravest source of discontent with them. Through all the years The Investors' Review has struggled for clean finance, for independence in journalism, for the enlightenment of the public on sound principles as applied to joint stock enterprise, these analyses of reports and balance-sheets have received our particular care. They have been critical, but unprejudiced and fair, plain in language, too, and yet we continually receive questions that ought not to require asking if those who put them would only first read and master the significance of the observations printed in the paper. This, we confess, is at times disheartening, and yet never a month passes that does not bring abundant confirmation of the justness of our criticisms and the timeliness of the hints and warnings given. Perhaps, though, it is only the casual reader who glances and throws aside who appeals to us for further light. The Investors' Review is not a journal to be treated in that way, and never has been. There is no exaggeration in the statement that the smallest shareholder in joint stock enterprises, the most humble investor in public securities of any kind neglects his own best interests when he overlooks or disregards the systematic and unremitting criticisms and appreciations of The Investors' Review. Its forecasts may sometimes be long in receiving the justification of events, but sooner or later they nearly always prove true.

Sir,—As the best way of answering this question I have taken out, as per enclosed, the replies from your various subscribers and marginally noted against same the points in which I concur, and those with which I disagree. The first thing that strikes one is the difficulty you will have in reconciling the various opinions. One subscriber suggests that the fees for the proposed confidential sheet should be uniform. Another thinks they should be graduated. One thinks the fee should not be more than five guineas, another thinks it should not be less than ten. For my part, with the exception of his closing paragraph, I agree entirely with M.H. and I thoroughly agree with the alternative methods (1) and (2) proposed by J. A. H. I also find myself in accord with your subscriber who writes from Edinburgh under date 4th inst., in so far as he suggests that you should keep an account for deposits from subscribers in anticipation of inquiries. There would be less hesitation in putting forward an inquiry when one had not the trouble of making a remittance each time. I also think that the "Model Trusts" should be resumed. If this were done it would meet the desire for suggestions for investments, which so many of your subscribers express. The part of the Review which I value most is that in which you give a comparative and critical analysis of companies' accounts. I do not consider this, as you seem to do, an "overloading" of the journal. I would like to see more of it because in my opinion, and in my experience, it constitutes the Review a valuable work of permanent reference.

You will see that, upon the whole, I disfavour the proposal to issue a separate confidential sheet, the purpose of which could, I believe, be more successfully met by a development of the Journal on its present lines. I feel certain that the separate sheet would tend to deprive the Review of a great part of its value. On the other hand, I feel that it would add considerably to its usefulness, and be the means of increasing its circulation, were you to declare (let it be a week or a fortnight after, as suggested by J. A. H.) the names of the securities on which you have expressed an opinion in answer to correspondents. The trouble you take for one would thus become available to a thousand. In short, I consider you should aim at broadening, and not narrowing, the basis on which the Review's popularity rests.

Your obedient servant,
Nemo II.

Perthshire.
December 19th, 1906.

Dear Sir,—I was very pleased to see above suggestion, but owing to absence from home have not been able to write you on the matter. I strongly agree with you in not mentioning names of

securities in "Answers to Correspondents." I do *not* agree with the proposals that you should take charge of people's investments—let them take care of their own and apply to you for advice which (as in my case) is worth much more than you charge for it. The question of suggesting investments is as you well know a very delicate one, but I have no doubt with your knowledge of financial matters and human nature you will be able to put a practical working scheme before us which I shall be pleased to join.

GEO. W.

Sheffield,
December 12, 1906.

Economic and Financial Notes and Correspondence.

The Depreciation of Gold.

An interesting and thoughtful essay on "The production of gold and its effect upon prices" was read by Mr. Alexander Macindoe, of the Glasgow Stock Exchange, before the economic section of the Royal Glasgow Philosophical Society, on 14th November last, and has now reached us in pamphlet form. No economic question has greater immediate interest or is more difficult to dogmatise upon. Mr. Macindoe, however, has handled the subject with much judgment, and we are largely disposed to agree with his argument and conclusions. Like any other commodity, gold decreases in value when produced in abundance. This decrease is expressed in augmented prices for other commodities whose market price is expressed in gold. The gold coin used in calculating prices remains the same in weight, in fineness, our sovereign continues to be exchanged for raw gold of standard fineness at the price of £3 17s. 9d. in coined gold, but the coin grows less effective as a medium of exchange against everything else. That is broadly the economic law, but all sorts of cross currents and interrupting or disturbing influences come into play to hide its operation. Of the concrete results, however, there can be no question. Prices of commodities expressed in gold tend to rise as the metal becomes more plentiful, and with the rise comes speculation, an apparent ease in becoming rich, also an eager anticipation of the future out of which spring all manner of difficulties. Nothing is more striking in Mr. Macindoe's thoughtful essay than the way in which he brings out the fact that times of monetary stringency, of panic, coincide with a too abundant outpouring of the yellow metal from the mines. The metal fires the imagination of all classes of people and tempts them into adventures that overengage their resources; wealth is dissipated instead of accumulated, and as prices ascend the credit resources of banks and capitalists of all classes are drawn upon until exhaustion supervenes and the abundance of gold ends by producing a credit famine, the outcome of wealth consumed.

Being a stockbroker most of Mr. Macindoe's illustrations are based upon Stock Exchange experiences, and we do not feel sure that his generalisations thereon are not at times too sweeping, and open certainly to qualification. Other influences besides the increasing abundance of gold have powerfully contributed to the market degradation of low interest-yielding securities during the past decade, and the continued outpouring of new capital upon our railways has done more than anything else perhaps to bring down the price of their ordinary stocks. It remains true, however, that the tendency is for the market value of securities yielding poor returns to fall as the rates of interest on loanable capital in general go up, as the cost of living increases. Abundant gold appears at first sight to produce in these particular directions the opposite effect that it exercises on the prices of ordinary commodities—on silver for instance; but the law at work is really the same and the fall in the price of "poor-yield" securities, to use Mr. Macindoe's phrase, is a consequence of the stimulus applied by gold to the credit-generating energies of banks and capitalists. Securities yielding high returns in interest and dividends, or believed to be likely to yield them, soar upwards in price and bring disrepute upon those stocks whose yield is fixed, declining, or uniformly small. Moreover the general advance in the market price of commodities caused by a flush of new gold tends to undermine the productiveness of many old industries, and not least of the railways, whose business shuts them out from the fleeting, and possibly exhausting, benefits a period of high prices bestows and lays them open to suffer from all the disadvantages dearness inflicts upon the consumer. Not the least valuable part of the essay is that in which Mr. Macindoe discusses the ups and downs of silver, and we note with pleasure the soundness of his views on the subject but cannot now enlarge upon it. It is now the turn of gold to be over-abundant and of silver to appreciate in its price as measured in gold. What its consequences are to be to the world, to the British Empire, to us, we do not yet know, but unless we misread grievously the signs of the times the next few months and years will bring about many changes and startle us with not a few painful surprises.

Those interested in economic developments will find a study of Mr. Macindoe's able and well written essay no bad preparation for an intelligent appreciation of the phenomena of money and stock markets as they arise.

Indian Railways.

Beyond what has been pointed out in the analysis of the various reports as they appeared there is little to be said about the business of these railways for the first half of this year. All of them appear to be prospering, and we see no reason why they should not continue to prosper, although there will be ups and downs. That the railways are effecting great changes in the habits of the people of India and bringing about a mixing of races, if not a fusion, must be obvious to the most superficial observer, but we do not know that as the years slip by the profit to the British investor is going to increase. On the contrary, we have considerable fears that working expenses and the cost of additional capital will in course of time play the same havoc with the capacity of Indian railways to earn surplus dividends that they have done at home. Most of the railways whose accounts we have analysed show increases in working expenses, when comparing the latest figures with those of the corresponding period. Scarcely noticeable exceptions are afforded by the Bengal and North-Western, and the Bengal-Nagpur among the more important systems, and the figures of the Delhi-Umballa Company are kept at the same ratio, but the great lines all show increases. Even the East Indian has now gone up to 37.06 per cent. of the gross receipts, still an ominously low proportion, and the ratio on the Burma railways is 61.5 per cent., as compared with 58.37 per cent. The South Indian has gone up from little over 50 to nearly 56 per cent., and if small lines like the Kalka Simla or the Southern Mahratta show decreases, we cannot regard these as materially affecting the general statement. As the cost of living rises in India through the gradual depreciation of the currency, the pressure upon the railways to pay higher salaries and in other ways meet the requirements of their staff must expand. Moreover, the railway companies cannot recoup themselves to any important extent by raising their fares or freight charges. As it is now they would appear to be charging too much for their first and second class passenger tickets, as these divisions of the coaching traffic either show very little progress or actual decline. Their strength lies in the third class traffic, which continues to be remarkably prolific, but the nett earnings from which cannot be also prolific owing to the extremely low scale of fares. Goods traffic is also carried at rates which railway managers in this country would scorn, but then the traffic of the railways is mostly in raw products, a lamentably small portion of their earnings coming as yet from manufactured articles capable of bearing heavy rates of freight.

Then as to capital expenditure we know from the Indian Budget and from the annual review of Indian finance by the Secretary of State that it runs from £8,000,000 to £10,000,000 per annum. Much of

this is directly incurred by the Simla Government, but it does not matter how expenditure originates, or by whom it is controlled, because it all goes to increase the interest charges upon the lines actually in existence or coming into operation. In the June half-year, for example, lines like the Bengal-Nagpur spent upwards of 69 lacs of rupees (upwards of £400,000), while the outlay on the Great Indian Peninsula was about 70 lacs (over £450,000), and on the East Indian upwards of 90 lacs (over £600,000), all money raised in England. This steady imposition of fresh capital charges must tell in time upon the dividend yielding capacities of the various companies, unless the traffic grows at a still greater ratio, of which we see no indication in the figures of the reports before us, or in the facts over a series of years. A bad harvest depreciates earnings always, and expansion is slow. Famine in one district may augment for a time the income of the railways that serve it, because grain has to be hurried in from other parts of India in order to supply the wants of the people, but after the famine is gone the recovery of the afflicted regions is slow, and while the great mass of the population remains in abject poverty, with no reserve between it and want, with no great expansion in buying power, we cannot look for healthy and continuous growth in the earnings of the various lines. It is a marvel that they year after year do as well as they have done, and yet the surplus dividends distributed for the first half of this year do not always indicate progress. The East Indian Company, readers may be reminded, pays the same as for the first half of 1905, viz., £1 0s. 9d., per cent. on the "D" annuity. The Bengal North-Western also pays 3 per cent. out of the company's share of the surplus earnings, but the Burma Railways Company pays at £1 18s., 2s. less, and the South Indian gives only 30s. as against 45s. Even the Great Indian Peninsula, prosperous as it is, pays only 6d. more at 24s., and the main cause of this stagnation is unquestionably the increased working expenditure for gross earnings show healthy elasticity. Holders of Indian Railway stocks will, therefore, have to watch them closely, and take early warning of any discouraging change that might affect their income. Just one other point. How do the various lines deal with the charges on freight carried for each other? Do they make a profit on it? And are the charges incurred in the conveyance of the staff and of materials for their own lines based upon nett cost, or only rough approximations thereto?

Floreat Rhodesia.

May Rhodesia flourish is the daily prayer of thousands other than the directors of the Chartered Company. But, unhappily, it will not flourish, despite the magnificent railway systems built over wide wildernesses, where it is hard work attracting a population by scanty means of subsistence, and where the prospector and tributor seek for gold in vain. However, it is no news to learn that Sir Charles Metcalf feels absolutely assured that his dreams, if no one else's, have been realised. In his eyes Rhodesia is a rich and flourishing region, a land flowing with milk and honey, whereof the streams are large and nourishing enough to support vaster multitudes than have yet been attracted thither, or than are ever likely to be while the Chartered incubus blights the land. Sir Charles has recently returned to England from the Congo Free State border, after fulfilling a mission in connection with the survey of the extension of the Cape-to-Cairo Railway. In an interview with a representative of a news agency he said:—"During my last tour I have gone over the whole of the Rhodesia, Mashonaland, and Beira railways by daylight, and found the roads to be in very good order." Here is conscientiousness, if you like. Many a man might have satisfied himself with taking a midnight trip and examining the road-bed and permanent way in the flattering light of the moon; others might have walked over it and scrutinised every yard with the aid of a candle or rushlight. But Sir Charles, honest man, actually saw the whole system by daylight, an act of conscientious labour for which he deserves his due praise. So we can believe his word that the roads are in very good condition, even though it might follow from this admission that they could be in better condition, for he did not commit himself to the assertion that they are in the best condition. At the same time, he assures us that the working expenses are being cut down, though, strange to say, on the Rhodesia railways they advanced swiftly during the past six months. "The nett profits on the Mashonaland and Beira lines," he proceeded to say, "will show a very satisfactory increase on the working of the previous year. Traffic seems to be improving, and, in fact, the one bright spot in South Africa at the present moment is Rhodesia, where there seems to be no depression." Happy Sir Charles to meet only smiling or grinning faces, joyous hearts, and contented minds, where all are thriving, where want is unknown, the one bright spot on earth depression dares not to appear. Yet amidst it all, simultaneously with this abundance of riches, with the sure promise of better times in store, Chartered deficits are growing, so that a wild scheme has had to be hatched and furiously man-devilised in order to try and stave off insolvency a little while longer. Mining companies are also piling up their losses or going into liquidation by the dozen, or amalgamating with the view of getting fresh cash from an oft-bled proprietary. The sparse inhabitants may be smiling, or Sir Charles may imagine them smiling, but shareholders on this side are not, for to-day they find themselves considerably poorer than they were twelve months ago, with less hope to sustain them. What of that? Sir Charles sees the farmers doing well, fresh ground being put under cultivation for grain and tobacco, and a satisfactory increase of stock. "Horse-breeding has been started with good results in the Inyanga district, and the importation of merino sheep is still being carried on. From Broken Hill some 3,000 tons of zinc ore are being sent out per month by the Rhodesia, Mashonaland, and Beira Railways. The copper properties of Bwana Mcubwa and Constansie are being steadily developed, and are giving signs of profit." There is precious little proof here of that prosperity and absence of depression which Sir Charles vaunts. Horse-breeding and the importation of merino sheep will not recoup the millions spent and lost in the country since the conquest of the Matabele. And what is the significance of his vague statement that he sees signs of profit in the copper properties of the over-praised Broken Hill district? Results have reasonably been expected long ere this, but there is little hope of profitable operations for years to come. You cannot for ever hide the nakedness of the land, good troglodytes of the Chartered Company, by your abundance of platitudinous pomposity. Facts will vindicate themselves, come of your rhetoric what may.

Prosperous Mexico.

The Republic of President Diaz is unquestionably going ahead, but Mr. Reginald Tower, the British Minister in Mexico, is quite right in pointing out that the great increase shown in the trade figures for the fiscal year ended June 30 last does not by any means represent a genuine expansion in the country's commerce. These figures indicate an increase of £4,250,000 or 23.82 per cent. in the value of Mexican imports; and the exports make even a better exhibit, showing, as they do, a total of £27,114,000, an increase of £6,262,000 or 30.03 per cent. Did these increases represent an expansion in the merchandise traffic of the country they would be delightful to contemplate, but unfortunately the account is complicated in more ways than one, so that there is, to begin with, no real comparison between the past year and the previous one. In the interval the currency of Mexico has been established on a gold basis at an arbitrary exchange, the silver Mexican dollar being now taken at $0.4985 in gold. It used to be the fashion to take the Mexican dollar roughly at 5 to the £, without regard to the exchange value of the silver coin. That latterly gave often an exaggerated and always an un-

fair estimate of the value of at least the exports, and upon that footing it might be said that last year's figures are really better than they show. But this is not by any means all, for the change in the currency has involved large movements of the precious metals of a quite exceptional kind. For example, the exports of silver increased last fiscal year by £5,988,000 or nearly 100 per cent. to a total of £12,540,000, and against this outflow of silver have to be set the importations of gold, although the statistics relating thereto are not set forth by Mr. Tower. He gives us not the imports, but the exports of gold in the two years, and these show an increase of £333,000 in 1905-6 over 1904-5, but he also tells us without giving figures that the export of silver dollars counterbalances the increase in the amount of gold imported in order to introduce the gold standard.

Probably enough the figures are not yet available, but they should prove very interesting when they do become public, and we are not at all convinced yet that Mexico has taken a wise step in arbitrarily fixing the exchange value of the silver dollar. It is getting gold coins minted in Philadelphia, and these are presumably being put into circulation. The operation, moreover, has been facilitated, so far as equivalence of value is concerned, by the unexpected, and we fear excessive, advance in the price of the white metal, but it is in some degree an unreal currency all the same, no matter whether the value of the silver dollar rises above or falls below the standard arbitrarily fixed by the Government. Meanwhile, however, there appears to be no doubt that the general business of Mexico has been stimulated, and as the country has almost boundless resources, it is possible that any loss accruing through the false valuation of the currency may be more than made good by the development and increased prosperity of the country. Details, however, relating to the general commerce do not indicate any remarkable expansion so far. Last year's imports of machinery and apparatus were worth only £2,054,000 as against £2,244,000 in 1904-5. The imports of dry goods were also less by about £26,000 at £2,302,000, and, in fact, had it not been for the increased imports of minerals, in which we gather the new gold coins are included, the figures of imports for the past year would have shown no particular progress. Such gain as there was, was entirely in the imports from the United States, and Mexico took rather less from the United Kingdom, France, Belgium, and Spain, and only £36,000 worth more from Germany. The exports of the Republic tell much the same story, but exhibit small increases in quite a number of items. The value of rubber exported, for example, went up £167,000, and of vanilla £187,000, while untanned hides were sent out to an increased value of £114,000, but none of these items of export reach an aggregate of £1,000,000 altogether, and there was a decrease of upwards of £500,000 in the value of the sugar exported, the low price of that commodity in the British market having last year stopped the exports from Mexico. There was also some decrease in the export of lumber and dye woods, as well as in tobacco, so that we must wait a year or two before we can rejoice over much.

Rhodesia Exploration and Development.

As usual, the directors of this leading Rhodesian company issue their annual report when shareholders are thinking of their Christmas festivities and trying to banish disagreeables until they have fed up. Surely it was hardly considerate to remind them at such a season of further considerable losses. This reminder may, for all the directors know, have spoilt no end of appetites and saddened many a Christmas fireside. We see no earthly reason why their dismal report could not have been issued a week or two before or a week or two after the holidays. All told, the income in the twelve months to June 30 was £34,407, of which £8,781 came from dividends and interest, £12,714 from profit (less loss) on shares sold, £12,170 from agency and other fees, and the rest from rents and transfer fees. Ordinary expenditure came to £24,441, which includes £1,401 for depreciation and £1,458 spent on abandoned mining proposals. So a nett profit of £9,900 is shown and the directors bring down £104,243, making £114,209. As we have shown in previous years, a large part of this £104,000 is past premium money received, but we will not dwell upon that, as there are some people who do not mind paying an inflated price for a share of this description. But with all this paper show of wealth, whether premiums or genuine profits, no dividend is again paid. There is further serious depreciation to face, although the company is a large shareholder in Bankets and kindred things. So £110,213 of the aggregate credit is appropriated to write down the share assets, leaving a tiny £3,990 to take forward. This large sum is evidently an arbitrary amount, for the auditors tell us the shares and debentures that have no published prices are entered in the books at the directors' own valuation, so the depreciation has probably been greater than the allowance made. The entire hotch-potch of stuff is valued in the aggregate at £400,838, and it is highly doubtful if it could be sold at anything approaching this sum. Though Sir Charles Metcalfe and other Chartered authorities assure us Rhodesia is flourishing and is the one spot on the South African continent where there is no depression, the directors of the Rhodesian Exploration evidently do not share his opinion. On the contrary, they seem to be sick of Rhodesia, and no wonder, for the company's losses in that country in the past three or four years have been stupendous, met mostly by issuing shares at fat premiums, one of the dearest ways of paying for them. In fact, the directors are turning their backs on South Africa itself, for they "are of opinion that the operations of the company might with advantage be extended outside that country, and they propose asking the shareholders at the general meeting to endorse their views in this respect, in order that the company may, if the shareholders approve, invest in undertakings presenting greater opportunities of profit than are to be found at the present time in South Africa." What opportunities they actually see we know not, for they do not hint at them; but evidently it is not that glorious, imperial Victoria Falls scheme, which could do with a little of the cash the Exploration Company still possesses. There are contango loans for £34,267, actual cash £17,850, and some investments in first-class securities worth more than £29,000, the current liabilities being nothing to speak of. Perhaps we shall hear some interesting things at the meeting, perhaps not, for the schemes may be very nebulous as yet. Is not Rhodesian "prosperity" a queer sort of affair, though?

American Business Notes.

The New York correspondent of the *Financial Times* gives some interesting particulars about the railroad building projects of the United States and Canada for the coming year. After pointing out that the Canadian Pacific, Canadian Northern, and Grank Trunk Pacific companies are busy constructing fully 9,000 miles of line, he goes on to show that the Yankees mean to far outstrip this with an estimated construction of 15,000 miles, most of which must be ready by January 1, 1908. Of this stupendous extension in the iron tracks—they are never more than half-made railroads at the start—over 4,000 miles are to be in Oregon, Washington, Idaho, and Montana, while 3,000 miles are to be constructed along the Pacific coast, but the most important of all the projects is the line designed to enter into direct competition with the Southern Pacific, which hitherto has had a monopoly of the carrying trade between New Orleans and San Francisco. Should the plans for these new lines mature, a powerful rival will be created to the Standard Oil system, and especially the Southern Pacific road, nominally controlled by Harriman. We shall follow the fortunes of this scheme with much interest, but the others promise grand fighting by

and by, in course of which the public may chance to get back a little of its own.

By whipping in some cash and holding down the total of their advances the New York Associated Banks last week contrived to exhibit a surplus reserve of $3,284,000 instead of a deficit of $1,699,000 shown the previous week. A year ago the surplus was only $4,159,000, so that the Wall Street market was able to buoy itself with the hope that "the worst of the squeeze is now over." It is a vain hope, first because the exhibit of the Banks is merely another product of trick finance, and secondly because the drop in prices on the Stock Exchange has not gone nearly far enough to give permanent relief to the credit providers. Moreover the demands of the railways alone for new capital are more than enough to neutralise any benefit likely to arise from the dividend distributions at the New Year, and unless further smashes take place we shall see the money agony continue and increase next quarter. After all these Associated Banks have less than £200,000,000 of nett deposits, of effective credit with which to sustain a stock speculation and a demand for new capital unparalleled in their magnitude. Bankruptcy of a far-reaching kind has therefore been averted only by utilising our money market and the money markets of France and Germany to help New York in bearing the burden. We see the result here in 12% carry over rates on Yankee shares, in a strain that may upset the London market before all is over.

New York ricketiness is seen not only in incidents like the failure of Arnold Leo and Co. on the New York Stock Exchange with liabilities said to amount to £250,000, but by the dismay produced when the news became public that the Chicago, Milwaukee and St. Paul Railroad wants $10,000,000 paid in on its new stock on the 31st inst. What could such urgency mean if not that the company has so used up its resources as to be in immediate need of funds with which to pay its January interest?

And speaking of these railroad capital demands reminds us of the scandalous terms upon which the new shares are offered for subscription. Great Northern ore certificates, the Jones Agency tells us, rose to 80 in the end of last week. That is the value of the bonus conceded to existing shareholders by offering them the new shares at par. Milwaukee "rights" were quoted at 34¼ to 37⅞, and closed at 34½, with 33,000 sales. Northern Pacific "rights" again ranged from 26 to 28, and left off at 27. This means that the fortunate allottees of the various new shares are getting a Christmas-box of from 26 to 80 per cent. at the expense of the properties in which they are partners, and of the public whose servants the railroads are supposed to be. They are bribed in this way to support the management, to hold their tongues about abuses, to leave all power in the hands of the autocrat-financiers by whom the railroads are controlled. We are guilty of the same kind of thing here and cannot throw stones, but the openness with which the device is used in the States and the utter indifference of all concerned, whether to the morality of the proceeding or its expediency, is something the American people are alone capable of exhibiting to perfection. If the premium on the existing share capital is genuine the high credit of the companies thus emphasised ought to have been used to lessen the weight of new capital imposed; most of the premium in other words ought to have gone into the treasuries of the companies, not into the pockets of the shareholders. One day we doubt not the companies will want that diverted capital. Its allotment on the lines indicated heralds a crop of bankruptcies and reorganisations in the not distant future.

Mineral production in the United States was magnificent in 1905, and is certain to be larger in the year now closing. For the earlier year the United States Geological Survey gives figures of dazzling brilliancy; an aggregate value of $1,624,000,000, of which $382,450,000 falls to pig iron alone. Coal was mined to the weight of 384,599,000 tons, and the value of $476,757,000. Going back a few years, the significance of totals like these becomes more impressive still. In 1897 the total value of mineral raw materials produced was only $647,000,000. The value of the copper mined now considerably exceeds that of the silver and gold combined. Last year precious metals figured for $122,403,000, or hardly one-third of the value of pig iron, and nearly $22,000,000 less than that of copper taken at an average price of 16 cents. per lb. At present the price of copper is 22 to 23 cents. per lb., and other prices have also risen, so that the exhibit for this year now dying promises to overwhelm the mind with awe. The problem is: if 1905 gave an increase of $263,000,000 over 1904 on the value of all minerals produced, what will be the increase of 1906 over 1905? Augmented prices allowed for probably not less than $500,000,000. No wonder our strenuous cousins are hard put to it to get enough credit to go round.

Passing Events.

The news that Mr. John Allen Fradgley has decided, to the regret of his board and of all his old friends, to retire at the end of this year from the management of the Union Bank of Scotland's London office, turns the memory back over a vista of many years. For Mr. Fradgley left the Bank of England to take up his duties with the Union Bank of Scotland at a critical time in banking, Scotch and English, but especially Scotch. The City of Glasgow Bank stopped payment in 1878, and shook the banking system of the country to its foundations, causing Scotch banks above all to be much distrusted. The work of building up a London business for the Union Bank of Scotland was therefore anything but a light one, and only a strong man could have overcome the initial difficulties. John Allen Fradgley was a strong man and a resolute, a first-class practical banker too, and he had many connections and friends in the City ready to help him. He therefore succeeded where another man would have failed, and in course of years built up a business at his branch in Cornhill, which for quality and soundness was something his colleagues might envy but could not surpass. Well may his board let him go with reluctance, though he leaves a competent successor of his own training in Mr. Andrew Gordon, long his assistant. Mr. Gordon in turn will be succeeded by Mr. A. C. D. Gairdner. Thus "the old order changeth."

Rather an interesting mining romance is that of the origin of a company called the Tominil Mexican Mining Company. Though the name of the company is new the mine is old, and it is the property to be worked that has the romantic associations surrounding it. There is a syndicate in existence called the Tominil Syndicate, with a capital of only £20,000, and it is said that the shares in it are being dealt in on the basis of £3 10s. Who are dealing in them we do not know and certainly do not care, so long as the buyers are not the readers of this Review. The syndicate is issuing its first subsidiary and this is the Tominil Mexican Mining Company aforesaid. The parent concern has options over some mines in the State of Durango, Mexico, of which one is a certain San Felix, with an area of over 50 acres, not 50 miles. This is the ancient mine taken up. It was discovered so long ago as the year 1857 by a poor Mexican miner named Manuel Rubio, who parted with half of it to a rich Spanish merchant in order to provide working capital and equipment. After spending some fourteen years of labour upon it the two partners, who meanwhile had become millionaires, had a quarrel and the discoverer went to San Francisco with £16c,000 with the object of buying out his richer partner. But the ship in which he sailed was wrecked and he and his bullion were swallowed up in the Gulf of California. For twenty years afterwards the mine was worked only at long intervals. In 1890 a London syndicate was formed and provided £30,000 to reopen it. More disputes followed and it was closed down for a further decade. Such is the mine to be acquired by the new company. Will a prospectus be issued, or will the shares be "introduced?"

As we briefly remarked last week, the scrip dividend announced by the directors of the Randfontein Estates

Gold Mining Company, is the second of the kind it has distributed during its career. The first dividend was in the shape of a bonus distribution of Porges Randfontein shares in 1906, one share being given for every five Randfontein shares. Although the company has plenty of cash, about half-a-million probably, no cash dividend has ever been paid, much to the disappointment of some impatient shareholders. The subsidiaries of the Randfontein Estates number twelve and Mr. J. B. Robinson has recently announced that several more companies are ready to be formed as soon as an adequate supply of native labour can be procured. In the official announcement made it is left to conjecture as to what shares will be distributed. Three hundred thousand is the number to be divided on the basis of one share for every ten, but a great deal will depend upon the shares selected. Out of the twelve subsidiaries only four are dividend payers, viz., the Porges Randfontein, the North Randfontein, the South Randfontein and the Robinson Randfontein. The other eight are still in the very early stages of development and they cannot hope to become dividend payers for many a year to come. Thus the shares of any one of these companies would be much less valuable than those of the four already distributing their profits and shareholders will not know how to estimate the real value of their scrip dividend until they know definitely what kind of paper they will receive. Whilst making the announcement the directors might have put all doubts at rest on this head and it is difficult to understand why such particulars were not given. So shareholders will probably have to wait until the full announcement is made at the forthcoming annual meeting.

The controversy between Mr. J. B. Robinson and the Witwatersrand Labour Association is still going on and it is impossible for us to devote the space to follow the arguments on both sides. Nor is it at all necessary, for the question at issue will shortly be settled in a way that will put all doubts—biassed and unbiassed—at rest. Mr. Robinson's main contention is that the Association is a monopoly pure and simple and the retort of the bosses' institution is that it is not a monopoly. A monopoly is that which has sole control over the supply of any product and as the Association has entire control over the supply of native labour to the mines, this power seems to answer in every respect to the definition. A monopolist resents fiercely the attempt of any individual to encroach upon his preserves, and as the Labour Association resents with undisguised spleen and bitterness the efforts Mr. Robinson has been making to tap of his own free will the native labour preserves, this is precisely identical with the tyranny and injustice established and fought for by a monopolist. So ordinary logic as well as mere common-sense convinces the disinterested that the recruiting institution of the mine bosses is a monopoly. There are some folks, however, so perverse as to contend that a monopoly is better than free competition. What have the multitude of shareholders in the South African companies gained from the monopoly of the Witwatersrand Native Labour Association? As it has failed to obtain an adequate supply of natives does not wisdom counsel a change of method? To be sure it does. And it is upon such counsel as this that the Portuguese authorities, with the British Government, are acting in making an independent inquiry into the whole matter.

The Kalgoorlie *Argus* reminds us that that really very fine West Australian mine, the Great Boulder Proprietary, has during the twelve years of its existence yielded 1,364,866 ozs. of bullion, of a value of £4,846,629. Out of this it has distributed £2,316,175 in dividends, whilst the value of the ore reserves at the present time, computed on a conservative basis, is put at about £2,000,000. The *Argus* becomes quite eloquent when contemplating this achievement, which, it must be admitted, is really something to be proud of. Indeed, the Great Boulder Proprietary has been one of the steadiest gold producers and one of the most consistent dividend payers in the whole Westralian list, and, what is almost as important, it has not suffered from those noisome scandals from whose malodour so few West Australian companies have escaped. Nor does the price of the share fluctuate as violently as many another share in this group. The gamblers, for some reason or other, pay comparatively slight attention to Great Boulders. It has experienced many vicissitudes of fortune, in one way or another, but its career has been quite placid when compared with the ups and downs of neighbours. This is not what our contemporary says, but the figures quoted recall these pleasant facts. As the *Argus* puts it, it would be difficult to find a mine that has done so much for a country as the Great Boulder has done for Western Australia. And yet has not its very prosperity given the share hatching highwayman his opportunity?

There is still a considerable degree of mystery surrounding the Esperanza Company, and notwithstanding the many appeals to them the directors remain silent. The mine itself continues to do remarkably well, and very handsome dividends are regularly paid; but shares are being sold from some source, thus apparently giving confirmation to the persistent rumours that all is really not well with the mine; that actual conditions are worse than appearances indicate. For the month of November the return was certainly not so good as were those of the immediately preceding months, the profit dropping to £77,299, but, according to the official explanation this was due to circumstances not existing in the mine itself. It was the effect of a shortage of labour, which diminished the quantity of ore mined. However, the usual quarterly dividend of 6d. per share, with an additional 10s. per share, was paid, and yet the price does not budge from its present low figure. Do some influential holders know more than the great bulk of the shareholders? And are they selling out in anticipation of serious news that may have to be published before long? We do not know. No one seems to know except the one or the two or three who must know why they are selling. It is about time that directors gave their co-proprietors some information.

Shareholders in the Kalgurli Gold Mines have doubtless been highly pleased to see that this share has been the strongest in the West Australian market for some time past, and that the price has had a substantial rise. There is, of course, considerable gambling going on, which may largely account for the buoyancy of the share, but it must be admitted, at the same time, that the Kalgurli is one of the best, if not the most promising mine in the limited West Australian group. The annual report recently issued was a most encouraging one, and subsequent developments have borne out the sanguine opinions expressed by the management. Taking the estimates of ore in reserve at the end of July, together with the surplus of liquid assets, the market calculated that these together were equal to a profit of about £12 per share. Since then, the position in respect to the ore reserves has greatly improved, some of the developments in the mine being more promising than was at first anticipated. In the deeper workings especially are they of a very favourable character, but, for all that, the rise in the price may be overdone and amply discount the probable results from the various promising points.

As we foresaw, the meeting of shareholders in the Chillagoe Company, held in Melbourne on the 11th inst., approved of the issue of 300,000 new shares of 10s. each at 1s. premium, thus increasing the capital to £500,000. The funds, as already announced, are to be raised for the construction of the Etheridge railway, the cost of which will be, the chairman said, £350,000, this being the estimate of the Government engineer. In addition to this sum, however, considerable incidental outlay is anticipated and provided for in the Act, as much, perhaps, as another £50,000, or £400,000 in all. It is proposed to provide for this by the issue of 300,000 shares, which have been underwritten, and of Etheridge Railway debentures, secured as to principal and interest upon payments to be received from the Queensland Government, and by increasing the existing debentures to the extent of

£75,000 should this be necessary. The Act provides for the purchase of the Etheridge Railway in fifteen years upon conditions securing a minimum price under the worst possible circumstances equal to 50 per cent. of the cost, and for the payment of a bonus of 2½ per cent. per annum on the total cost of the line. It is impossible as yet to say whether the railway will eventually pay or not.

We are glad to see that all our newspapers give considerable space to the address delivered by the venerable Mr. Dadabhai Naoroji as President of the Indian National Congress, which met in Calcutta on Wednesday last. It was a remarkable address by a remarkable man, who has devoted the greater part of a long life unselfishly and unweariedly to the interests of his fellow countrymen. And surely it ought to encourage all those who desire to see the British Empire at the head of an assemblage of free States to find a great gathering of representatives from all parts of India capable of following and comprehending an address like this delivered in English, and capable also of stating their wants and grievances in moderate and constitutional terms. India cannot be held down for ever by the mere iron hand of the soldier, and the sooner we recognise this fact the better. There is certainly nothing seditious in Mr. Naoroji's closing advice to his countrymen. "Be united," he said, "persevere and achieve self-government, so that the millions now perishing by poverty, famine, and plagues, and the scores of millions that are starving on scanty subsistence may be saved, and India once more occupy her proud position among the greatest civilised nations of the world." That is a noble aspiration, and we ought to pay heed in time, even though self-government may not herald the coming of the new world paradise.

All over the world trade has been stimulated by the wealth of gold and the effects of peace to a remarkable degree. It is no wonder, therefore, that money is everywhere dear. In the latest accounts setting forth the trade of various countries and British possessions issued by the Board of Trade we find, for instance, that the expansion in the foreign commerce of four countries, Germany, France, the United States and the United Kingdom aggregates nearly £200,000,000 for the first nine months of the current year, and for the ten months ended with October last the commerce of France out and in shows an increase of £24,000,000, that of the United States of £50,000,000, and that of the United Kingdom of £72,000,000. Both the United States and the United Kingdom show the greatest expansion in exports, but the foreign trade of France has grown twice as much in imports as in exports. It does not need to be repeated that the commerce of the United Kingdom is the most elastic and, we trust, the most prosperous of them all.

An excellent appointment is that of Mr. Llewellyn Smith to succeed Sir Francis Hopwood, who goes to the Colonial Office, as Permanent Secretary to the Board of Trade. For the years during which he has been at the head of the Statistical and Labour Departments of the Board of Trade Mr. Smith has proved himself to be a diligent, able, and courteous servant of the Government and the public. He, we believe, organised the Labour Office, and when he succeeded to the control of the entire section on the retirement of Sir A. E. Bateman he faithfully maintained its good name, improving and expanding the statistics of the country's foreign trade on the lines his predecessor had drawn, and doing most valuable service by his honest and impartial presentment of the figures compiled to illustrate the progress of our commerce when that was impugned by the ill-regulated zeal of the protectionists. He well deserves his promotion, and we only hope that he may have left as capable a man behind him, for the new census of domestic industrial production and consumption will tax the skill and the conciliating powers of the Board of Trade as they have never been taxed before, if the results are to be full, trustworthy, and of permanent utility.

Preference shareholders of the United Indigo and Chemical Company received an unexpected contribution towards their Christmas expenses in the shape of an interim dividend of 3 per cent. This wipes off the arrears to the end of June last, and leaves the company free to make up a full year's dividend when the complete annual accounts are presented about eight or nine months hence, but whether the directors will be able to accomplish this is by no means certain. Proprietors will probably not forget that last year they had their appetites whetted in similar fashion, only to find when the report came to hand that, instead of a final twelve months' dividend wiping off all payments to date, only an additional six months could be paid, leaving one half-year still in arrear. It may be recalled that the report was so curiously worded and the profit and loss account drawn up in such a manner that probably a good many shareholders were not at all sure what their actual dividend was until the warrants were issued.

The Clyde shipbuilding return for the last twelve months again presents some wonderful figures. All previous records, so-called, have been easily eclipsed, the number of vessels launched being 372, of a total displacement of 598,000 tons, an increase of 53 ships and 59,000 tons over the previous year. The machinery represents 608,000 horse power against 518,000 last year, and something like half a million of new tonnage is said to be carried forward into the new year. From the Tyne comes a similarly pleasing story, sixteen firms producing 149 vessels of 418,571 tons, which, compared with 1905, shows an increase of sixteen boats and 61,113 tons. In this case, too, the figures represent the largest tonnage ever launched on the river in one year. First among the Tyne builders and this year first in the country, are Swan, Hunter and Wigham-Richardson, from whose works at Wallsend and Walker 25 vessels of 126,921 gross tons, were launched. The prospects for the new year are described as fairly good, especially at Elswick, where Armstrongs have their works.

* Fine Gold.

The *Book Monthly* starts the New Year in good time and in excellent fashion. Those "particular" and pleasing paragraphs are, if possible, more pleasant than ever, and abound in delightful little illustrations. Followed by a picture article on children's books, and more pages of "Publishers' marks," the magazine has a more than usually gay appearance this month. Its letterpress is interesting, noticeably the Editor's London Letter, with its just mead of praise to the woman novelist, and an article on that genius who budded, but lived not to blossom, Kirke White, written by H. Linton Eccles. To judge by the list of interesting books waiting to appear next month, January would appear from the point of view of those who deal in books to be a good time for publishing, and for those of us whom Christmas has not utterly "broke," it were well that we carefully study these pages.

SOUTH AFRICAN MINE RETURNS.

A decrease in the output was shown in November, mainly because the month was a day shorter than October. But making all allowance for this, the return did not come up to reasonable expectations. For the whole of the Transvaal the total was 533,373 ozs. in weight, of a value of £2,265,625, compared with 540,609 ozs. and £2,296,361 respectively for the previous month. So the decreases were 7,236 ozs. in weight and £30,736 in value. On the daily average there was an improvement, the figures being 17,779 ozs. for November against 17,439 ozs. for October, an increase of 340 ozs. per diem, equal to over 10,000 ozs. for the month. The output includes 11,578 ozs. gold reserves, in comparison with 14,968 ozs. for October. Compared with November, 1905, there was, of course, a considerable advance, viz. of 108,616 ozs. in weight and of £461,372 in value. Natives still came forward in larger numbers, the nett gain on the month being 2,142 against a loss by expiry and wastage of 6,919, but these figures are exclusive of those employed by the Robinson group. Up to date the totals are 5,236,450 ozs. in weight and £22,243,276 in value, against 4,897,221 ozs. and £20,802,074 respectively for the whole of 1905, yet no one is the richer, for prices keep falling. Substantial increases are shown by some of the leading companies, one of the best being that of the Van Ryn, of the Vlbe group.

SOUTH KALGURLI REDIVIVUS.

Ever since the year 1895 shareholders in the South Kalgurli Company have been waiting, presumably with some degree of patience, for a dividend. Whilst neighbouring mines have been doing well—many wonderfully well—distributing colossal dividends, the South Kalgurli has had many unhappy experiences. Since, however, the mine came under entirely new management it has certainly considerably improved its position and prospects, but even now there is much ground for doubt and anxiety. Whatever the future may have in store, however, shareholders may feel satisfied with the results of working for the financial year to September 30. Detailing these, we find that some 94,400 tons of ore were treated for a yield of 39,687 ozs. of fine gold and 4,189 ozs. of fine silver, showing that the ore is far from a rich one, though rich enough to pay with economical management. The value of the output was £168,132, sundry receipts, including dividends and interest, bringing the total revenue to £169,093. Expenses at the mine amounted to £89,347, development and equipment outlay took £15,614, depreciation £8,140, London costs £2,094, and other charges £2,739, leaving a nett profit of £50,802. Being naturally anxious to pay a dividend as soon as possible, the directors declared the first one at the rate of 2s. per share, paid last April, and followed it up with a final payment of 2s. in October. This left £10,371, but instead of carrying the whole to next year, the directors appropriate £10,371 in writing down the book cost of development, so the credit taken to the current account is only £431. This looks like dividing very closely up to the hilt, but it need not be too severely criticised, looking to the very strong financial position of the company. Dividends of 2s. per share would be anything but bad could one feel sure of their regular payment for some years to come. This expectation, however, is hardly quite justified by recent developments. At the end of September the ore blocked out was only 112,000 tons, compared with 123,200 tons at the same date in 1905, and not only is the quantity smaller, but the average value shows a decline. Some portions of the ore bodies exposed have not been sufficiently developed to justify their inclusion amongst the reserves, but the promise—or, rather, hope—is held out that as stoping proceeds the tonnage to be dealt with is likely to turn out higher than is now estimated. There is also some encouragement to be derived from the fact that the further extension of No. 3 east crosscut at the north end of No. 6 level has located a new ore body. It appears from the report of the manager that the strike of this ore body is parallel with the eastern boundary, and drifting north and south on it has been started. Messrs. Bewick, Moreing and Company have succeeded in appreciably reducing the working costs, and this is, of course, greatly in the company's favour, and strengthens the possibility of a maintenance of dividends. Including development, the costs average nearly 21s. 7d. per ton, and compare favourably with the figures at any other mine in the colony. During the current year the Lake View and Leader lodes will be thoroughly proved, and work undertaken to demonstrate the possible extension of the Hannault ore-body into the property. As already mentioned, the financial position is very sound. In addition to £20,000 in cash, £20,000 is invested in Consols, and there is some bullion in hand of a value of £14,745, whilst liabilities are only £2,710. So here, at any rate, there is nothing to worry about.

Books Received.

Handbook for Investors for 1907. (London: Mathieson and Sons, 16, Copthall Avenue, E.C.) Price 2s. 6d. nett.

Mining Highest and Lowest Prices, Dividends, &c. Mid December, 1906. (London: Mathieson and Sons, 16, Copthall Avenue, E.C.) Price 1s.

The coupons due January 10, 1907, of the Imperial Japanese Government 4½ per cent Loan (second series) for £30,000,000, will be paid by the Yokohama Specie Bank, Limited.

RAILWAY TRAFFIC RETURNS.

FOREIGN.

Alberta Railway and Irrigation.—Earnings for week ended December 21, $4,025, decrease $751.

Argentine North Eastern.—Traffic receipts for week ended November 23, £2,075, increase £148; aggregate from January 1, £81,721, increase £7,741.

Assam Bengal.—Traffic receipts for week ended November 17, Rs. 98,705, increase Rs. 14,982; aggregate from July 1, Rs. 18,26,005, increase Rs. 3,66,706.

Canadian Northern Railway.—Traffic receipts for week ending December 21, $117,600, increase $14,500; total from July 1, $3,744,400, increase $1,182,000.

Lucknow Bareilly Railway.—Traffic receipts for week ended November 24, Rs. 36,700, increase Rs. 5,363.

Quebec Central Railway.—Traffic receipts for the 2nd week o December, $9,900, increase $228; aggregate from January 1, $864,989, increase $108,988.

Rohilkund and Kumaon Railway.—Traffic receipts for week ended November 24, Rs. 23,454, increase Rs. 12,226.

White Pass and Yukon Railway.—Traffic receipts for the week ended December 14, amounted to $1,875.

ENGLISH.

Cleator and Workington Junction.—Receipts for week ending December 22, £1,475, increase £205; aggregate from July 1, £31,634, increase £1,231.

Cockermouth and Keswick Railway.—Receipts for week ending December 22, £762, increase £7; aggregate from July 1, £22,795, increase £267.

East London Railway.—Traffic receipts for October, £4,438, increase £95.

East and West Yorkshire Union Railways.—Traffic receipts for the week ending December 22, £444, decrease £11; aggregate from July 1, £9,173, increase £215.

TRAMWAY AND OMNIBUS RECEIPTS.

HOME.

Bath Electric.—Traffic receipts for week ending December 19, £665, increase £32; aggregate from January 1, £41,618, increase £6,928.

Blessington and Poulaphouca.—Traffic receipts for week ending December 19, £7, decrease £1; aggregate from July 1, £569, increase £46.

Bristol Tramways and Carriage.—Traffic receipts for week ending December 21, £5,036, decrease £73; aggregate from July 1, £129,994, increase £5,134.

British Electric Traction.—Receipts of all the Associated Companies for the week ending December 14, £25,638, decrease £1,116; total increase from January 1, £118,099; 435¼ miles, against 440¼.

Burnley Corporation. — Traffic receipts for week ending December 22, £1,128, increase £7; aggregate from July 1, £30,270, increase £2,361.

Dublin and Blessington.—Traffic receipts for week ending December 19, £107, increase £2; aggregate from July 1, £3,728, increase £219.

Dublin and Lucan.—Traffic receipts for week ending December 21, £97, decrease £10; aggregate from July 1, £3,080, decrease £11.

Dublin United.—Traffic receipts for week ending December 21, £5,041, decrease £59; aggregate from July 1, £132,013, increase £6,405.

Edinburgh and District.—Traffic receipts for week ending December 22, £4,599, decrease £267; aggregate from January 1, 1906, £251,250, increase £4,751.

Hastings and District. — Traffic receipts for week ending December 20, £531.

Isle of Thanet.—Traffic receipts for week ending December 22, £229, decrease £18; aggregate from October 1, £3,545, increase £239.

London County Council.—Traffic receipts for week ending December 8, £25,650, increase £11,820; aggregate from April 1, £947,230, increase £412,738. Miles 113⅜, against 51.

London General Omnibus.—Traffic receipts for week ending December 22, £20,558, decrease £2,692; aggregate from July 1, £564,358, decrease £9,145.

London Motor Omnibus (Vanguard).—Traffic receipts for week ending December 15, £4,313, increase £2,848.

London Road Car.—Traffic receipts for week ending December 22, £6,919, decrease £924; aggregate from July 1, £194,935, increase £2,850.

London United.—Traffic receipts for week ending December 21, £5,221, increase £418; aggregate from January 1, £313,354, increase £27,572.

Rossendale Valley.—Traffic receipts for week ending December 21, £186, decrease £5.

Yorkshire (West Riding) Electric.—Traffic receipts for week ending December 23, £974, increase £186; aggregate from January 1, £44,104.

FOREIGN.

Anglo-Argentine.—Traffic receipts for week ending December 23, £17,379, increase £1,723; aggregate from January 1, £783,273; increase £92,321.

Brazilian Street.—Traffic receipts for the month of Januar Rs. 43,391, increase Rs. 303. Total receipts from August 1, 190 Rs. 2,47,609, increase Rs. 3,737.

Brisbane.—Traffic receipts for month of October, 1906, £11,721, increase £1,371.

British Columbia Electric.—Nett earnings for Oct. $55, 159, increase $13,169. Nett earnings, including income from investments, from July 1 to October 31, $224,997, increase $40,699.

Buenos Ayres and Belgrano.—Traffic receipts for the week ending December 9, £4,129, increase £724; aggregate from January 1, £179,532, increase £9,804.

Buenos Ayres Electric. — Traffic receipts for week ending November 3, £2,017, increase £338; aggregate from January 1, £60,712, increase £9,035.

Buenos Ayres Grand National and New Tramways.—Traffic receipts for month of November, £28,810.

Calcutta. — Traffic receipts for week ending December 22, Rs. 53,314, increase Rs. 5,990; aggregate from July 1, Rs. 11,57,799, increase Rs. 73,851.

Cape Electric.—Traffic receipts for month of October, Cape Town, £11,276; Port Elizabeth, £3,199.

Cartagena (Colombia).—Traffic receipts for September, £10,646.

Carthagena and Herrerias.—Traffic receipts for the month of November, £5,248, increase £2,618. Total from January 1, £47,021, increase £15,943.

Kalgoorlie Electric.—Traffic receipts for August, £5,005; aggregate from January 1, £34,892.

Lisbon Electric.—Traffic receipts for October (Milreis 121,729.

Lombardy Road.—Traffic receipts for the month of July, 1,356, increase £16; aggregate from January 1, £8,795, increase £144.

Madras Electric.—Traffic receipts for fortnight ended October 31, Rs. 14,961, increase Rs. 2,096; aggregate from January 1, Rs. 2,86,564, increase Rs. 33,852.

Twin City Rapid.—Traffic receipts for the month of October, $473,821, increase $52,840; aggregate from January 1, $4,691,258, increase $787,590. Nett traffic receipts, $247,385, increase $19,342; aggregate from January 1, $2,513,773, increase $381,192.

The Investors' Review.

The Week's Money Market.

BANK RATE 6 PER CENT. (Advanced from 5 per cent. on Friday, October 19.)

Norfolk House, Friday Evening.

We shall now in all likelihood finish the year with a 6 per cent. Bank rate. It has been touch and go of late, and would not have been possible if the masters of the market had not striven to provide for or avert gold demands upon the Bank of England. Provision has taken the form of borrowing gold from the Bank of France by pledging three months' English bills there. The same thing was done in 1890, but whereas the Bank of England as agent for the Baring guarantors then pawned to the Bank of France £3,000,000 of its own securities, the pawning is now done by the finance houses. This is something gained, but it cannot tend to produce ease in the London Money market in the early part of next year. It may produce three months hence stringency greater than, or as great as exists now, for it seems that the borrowers of gold have contracted to pay off their debt in gold, and to indemnify the Bank of France in other ways. The debt anyway has to be provided for, and that will be difficult so long as the urgency of the demands of market inflationists continues to absorb all the resources of the Money market. From this point of view, then, the crisis is merely postponed, and meantime the Bank of France grows weaker. Within the past week its stock of gold has diminished by £880,000, and its note circulation has risen by £1,870,000. Its holdings of bills discounted have within the same period expanded by no less than £7,380,000. No wonder, therefore, that money has been dear in the open market in Paris, or that the New Year's outlook is clouded there.

New York, meanwhile, has been striving to do without drawing more gold from London. Under pressure of 8 to 10 per cent. for "time" money, for three months' loans occasionally, the New York exchange in London has been pressed sensibly below the point at which it would have paid as an exchange operation to draw gold from London, but none has been taken, and Wall Street bankers live in the hope that when the new year comes in the danger and necessity will alike disappear. We remain doubtful upon that point for the simple reason that nothing has changed for the better in the Wall Street position. Gambling may be more circumscribed, but it is not less fevered, or less divorced from every consideration of prudence and common sense. All the dividend money to be released at the New Year has already been "earmarked" to aid the gamblers in keeping the play strenuous. New capital demands are also of a magnitude that may be trusted to prevent any return to easy rates on Wall Street. The monopolists cannot build 15,000 miles of new railways for nothing, and that is the projected increase in the length of United States railways for next year. Even, therefore, if the New York banks contrive to look stronger for a short time in January, they will soon again find their commitments too heavy for their resources. There likewise the crisis will have been postponed, not averted.

Coming back to Europe, we find the state of things existing in the German Empire also anything but comfortable, eminently suggestive of greater troubles to come. For the second time in its history the Reichsbank has had to put its rate of discount up to 7 per cent., and, so far, its strength has not been increased by the change. Its figures for the past week bear witness to increased strain, for there has been a further loss of gold to the amount of nearly £600,000, and the note circulation has within the week gone up by fully £4,300,000. Moreover, nearly £4,000,000 more bills have been discounted, and altogether the position is so weak as to be suggestive of exhaustion. Germany, like other countries, has been using up her wealth; mortgaging it in many enterprises that have proved disappointing; anticipating it; lending it to creditors like Russia and Turkey, whose only reply when asked to repay is, "Lend me some more;" wasting it on militarism and in private extravagance. No durable amelioration, therefore, can be looked for on German money markets any more than on our own. Credit poverty will soon come back to them all, for the diminution in their visible resources now seen is more than "the usual end of the year drain"—it is the index of wealth dissipated.

Naturally, with so many English bills going to France—about £3,000,000, so far, it is estimated—our discount market has not been very busy this week. The effect up to that point has been the same as if the bills had gone straight to the Bank of England. The only difference is that instead of credit being thus generated and poured into the market gold has been imported to make bankers' money abundant. Accordingly both short loan and discount rates have, on the whole, tended to subside a little everywhere except

on the Stock Exchange, and there the minimum for account to account loans has been 7 per cent., while 8 and even 9 per cent. has been paid in the open market for assistance, so intense has been the strain. But call loans have often been 4 per cent. or under, and seldom more than 5 per cent., until to-day, when they often touched 6 and occasionally 6½ per cent., while bankers were content with 5½ per cent. for seven-day money unless such loans carried the borrower into the New Year. Even then 5⅞ and 6 per cent. were common enough quotations before this morning, when 6 per cent. became the minimum.

As for discounts, when on Monday last the terror of a 7 per cent. Bank rate laid hold of most minds, it was difficult to get three months' remitted paper disposed of under 6 per cent.; but when business was resumed, after the Christmas holidays, the market looked easier, and although the Bank lent on Thursday some £3,000,000 on seven-day loans it did no discount business. In the open market three months' paper receded to 5⅞ and 5 15/16 per cent. as fine quotations, with efforts on the part of holders of the finest class of paper to dispose of three months' usances to arrive and to be paid for early next month at 5½ per cent. Other usances were dealt in at more or less corresponding reductions, although the six months' rate was still close up to 5 per cent.

A heavy short loan but only a small discount business was done this morning by the Bank of England. It took short bills at 6 per cent., but in the open market we fear the working rate for three months' usances was hardly better than 5¾ per cent., although several houses still quoted 5⅞ per cent. and gave 5¾ per cent. as their rate for four months' bills. The market, in fact, is weakening and holders of the finest paper now talk of refusing to sell at a higher discount than 5¾ per cent. for threes and 4¾ per cent. for sixes. In all probability this weakness will continue until the market is pulled up by another fright.

Bullion continues to pour in from the Bank of France, and its arrival is timed very neatly to meet withdrawals. To-day, for instance, in addition to £175,000 in bought bars, the Bank of England received £610,000 in coin from the Bank of France, making £785,000 in on the day against which 500,000 sovereigns were set aside to be earmarked for the Indian reserve by the India Council. This still left the nett influx at £285,000. No wonder some people are talking of the Bank rate coming down next month or that competitors for bills are working rates down. We think it can only be a passing ease. Up to Wednesday night the Bank of France had parted with £1,733,400 in gold against English bills pledged.

SILVER.

The chief support to the market has again been the special buying, which was understood to be on behalf of the Indian Government, but there has also been a good demand from the bazaars. Prices consequently advanced to 32⅜d. per oz. for cash and 32 7/16d. per oz. for delivery two months forward, and close firm at those figures. Applications for the Rs. 1,20,00,000 Council drafts on Thursday amounted to Rs. 1,70,00,000 in bills and Rs. 5,30,00,000 in telegraphic transfers. Of these Rs. 29,15,000 were accepted in bills and Rs. 90,85,000 in transfers, tenders at 1s. 4 3-32d. and 1s. 4 5-32d. per rupee respectively receiving about 17 per cent. Next week another Rs. 1,20,00,000 will be offered.

Stock Market Notes and Comments.

One of the most suggestive characteristics of stock markets all this year has been the increasing difficulty that old-fashioned and genuine brokers and jobbers have had in making a living. The miscellaneous business, which is the life of the Stock Exchange and gives all the members something to do in steady-going times, has dwindled to insignificant proportions, and however hard the straightforward broker or jobber may work, he cannot make money, and very often does not succeed in earning a "living wage." That this should be the position of a majority of Stock Exchange members, at the same time that we have seen a dazzling advance in prices, huge overturns of securities, and many indications of feverish activity, is significant of much. We hold it to be an indication that Stock Exchange dealing has in recent years, and above all in the current year, become the occupation of organised bands of depredators—we can

call them nothing else. Syndicates, groups, associations of financiers, fluid or elusive co-partneries organise the game and play it against each other, or against the public, with the assistance of banking credit and every resource they can command. These bands continually remind us of the "free companies" that used to devastate Italy in the Middle Ages, or that preyed upon the French possessions of the Plantagenets after the withdrawal of the Black Prince from Aquitaine. They have just as little conscience as the most vicious cut-throat that ever followed a brigand leader, and their whole object is to sweep communities into their net in order to strip them by the methods of latter-day finance, which are heartless and ruthless as hell.

Surely it is a bad thing for stock markets to be at the mercy of "gentlemen of the road" such as we have indicated. In former times we had plenty of gambles, and people lost and made money in a miscellaneous sort of way, but they were generally gambles in which the multitude joined, and if the harm done was sometimes great the gains were at least spread over a number corresponding in some degree to that of the losers. Now it is otherwise, and ever since the public lost its money in playing to lose at the bidding of the Kaffir market giants there has happily been no wide-spread demoralisation through the habit of dabbling in stocks and shares. The markets have been left more and more to the great players or to professionals big and little. And it is now these players who employ most of the banking credit utilised to lift quotations for whatever security may be laid hold of, and if the rulers of the gambling raids make money, it is less at the direct expense of the miscellaneous small speculator than at the cost of banks and other possessors or holders of great masses of credit. There is both consolation and ground for alarm in such a state of affairs. We are glad that the public is not eagerly buying "bulls" of Rio Tinto shares, or joining widely in gambling for the rise in Hudson's Bay or Canadian Pacific shares. Pleased also are we to note a continued abstention of the multitude from the Yankee market as a whole. When the crash comes, as it must, the ruin should not now be spread through all the land, unless—and this is the ominous point—the engagements of banking resources in sustaining the concerted play of the troops of unscrupulous professional operators and financiers end in a banking crisis. Then, indeed, the public would be smitten from one end of the land to the other.

These are not particularly encouraging reflections at the close of the year, and we wish we could tell a more cheerful story. That, however, is impossible in present circumstances for we day by day come in contact with men who find their occupation gone so far as the honest trading in public securities is concerned. If they have money they can lend it at high rates, trembling the while lest the chasm should open beneath them and swallow the wealth they have or handle, and every half year brings evidence before us to show that banking resources are increasingly absorbed by the play of the professionals. There must be a reckoning up, a balance of credits and debits in this business one of these days, and when it comes will the banks be able to get back their money from the organised groups and syndicates to the extent they have always been able to do from the multitude of small players? That is a question we are continually ruminating upon, and to which we cannot find a reassuring answer. Suppose the Standard Oil Trust were to collapse, as we think quite probable, because the great wealth over whose custody Mr. John D. Rockefeller snivellingly bemoans himself which that particular group of freebooters has amassed, is, when analysed, found to be credit wealth. Originally there may, there must, have been a large amount of genuine profit to make the foundation for the superstructure reared by these men, but that has all been absorbed or buried beneath the foundations long ago, and the group lives by credit, devours credit, grasps at new monopolies by the help of credit, hoards copper on credit, and hoists copper shares by the same means. It will come to the end of its credit resources one day, and then collapse must follow. How far are our banks involved in the all-embracing ambitions of the Standard Oil mob, and will the assets distributable among its creditors when liquidation supervenes, be enough to pay all the debts incurred? We hope the managers of our banks will not pass a problem of this description lightly by, but ponder it and take precautions.

One thing we may be sure of, there will be no genuine healthy business to be done on the Stock Exchanges of this or any other country until the bands of free-booters now dominating all markets have been broken up and dispersed. The longer they sway prices and poison enterprises of every description, the worse must the position of the steady-going, honest investor and his market friends become.

The Week's Stock Markets.

The final settlement of 1906 occupied the Stock Exchange both before and after the Christmas holidays. In many respects it was the most important adjustment that has taken place this year, and it is one which speculators for the rise will not readily forget. It is usual for the joint-stock banks to call in large sums of money in the last weeks of the year which in ordinary circumstances are available for contango purposes, and in those departments of the House where the gambling during the past few months has been particularly rampant carry-over facilities were often obtained only with the greatest difficulty. The regular contango was fixed for Monday last, and although a huge amount of the business was accomplished on that day a good deal was left undone to be carried forward into Thursday. The lowest charge for bankers' loans was 7 per cent., this being the rate for old money, and where fresh accommodation was required the charge rose to 7½ and even 8 per cent. On Thursday it was said that higher rates even than these were being bid outside the Stock Exchange for loans covering the account, and as much as 9 per cent. was demanded when American securities formed a considerable part of the collateral offered. The most interesting section in connection with the carry-over was, of course, that for American railways, as it was known that a further huge amount of the speculative account built up in Wall Street had been transfered to this side for contango purposes. Such an opportunity was not to be missed, and takers-in of stock declined to lend any money under 10 to 12 per cent., and in many cases the charge for the privilege of deferring payment rose to 14 per cent. and even more. Some of the weaker class of speculators are said to have paid as much as 17 per cent. on Thursday, and in more than one direction carry-over facilities were probably refused. With so much to be accomplished in connection with the settlement there was little opportunity of opening out fresh business for the new account, but after the holidays a spirit of optimism seemed to prevail in most departments of the Exchange, and a fairly general advance in prices was recorded. All the play is in professional hands at present, the public not being inclined to speculate until it is seen what course the money market is likely to shape in the new year. Consols and all other British funds show practically no change, and the Corporation and Colonial groups remained steady. Colonial stocks were carried over at 6 to 7 per cent.

Prices were all good in the Foreign Bond section, with particular strength in Russian issues, despite the heart-rending famine and distress with which the peasantry is faced this winter. The new 5 per cent. loan further improved to 4 discount, being a rise of about 1½, and the older issues sympathetically advanced in substantial fashion. Other European stocks, including Spanish, Turkish, Portuguese, Bulgarian, and Egyptian, displayed moderate improvement, but the gain was not in all cases quite retained to the end. Several small rises were noticeable in the South American group, with Peruvians specially prominent, and Japanese bonds continued very firm. One or two Chinese loans lost an early fractional gain, and the

Central American group became rather dull, the Venezuelan Diplomatic Debt falling ½. Carry-over rates were onerous, but not more so than was generally expected. All the leading South American issues, together with Chinese, Japanese, and Peruvian debenture, were taken in at 7 to 9 per cent., but on Peruvian preference and ordinary the rate was 1 per cent. more. On Central American stocks the contango was 8½ to 9½ per cent., and as much as 8 to 10 per cent. had to be paid on the new Russian loan. On the old fours the rate was 5 to 7 per cent., on Spanish 6 to 7 per cent., and on Turkish 6 to 8 per cent. Making-up prices disclosed rather mixed movements, none of them very important. South American stocks were generally rather worse to the extent of ¼ to 1, and Japanese issues were also fractionally lower. Paraguay bonds made up 1½ better, and the Russian Nicholas Railway loan 1½ worse. Venezuelan 3 per cent. showed a drop of 1½, while two or three Chinese issues disclosed improvements of ½.

With the holidays following immediately on the arrangement of the account business in Home Railway stocks was on a very insignificant scale. Favourable dividend anticipations, however, brought in a few investment orders, and as the market was bare of supplies quotations advanced rapidly. The improvements, of course, were to some extent due to the addition of the contangos, but even allowing for these the gains were decidedly substantial in Great Eastern, Great Western issues, North-Western and North-Eastern. Good improvements were also shown in Great Northern deferred, Hull and Barnsley, Lancashire and Yorkshire, Midland preferred and deferred and Brighton ordinary and deferred. All active stocks, in fact, were up with the exception of District, Metropolitan and Central London ordinary. Carrying over charges ranged from 7 to 8 per cent. as a rule, but on such things as Brighton and South-Eastern deferred, Great Central and Metropolitan lenders were able to obtain from 8½ to 10 and even 12 per cent., while on District the rate rose to 15 per cent. Movements on the account were mostly favourable, but with the exception of gains of 2 and 1¾ in Great Western issues, 1 each in Brighton ordinary and deferred and Hull and Barnsley and 3½ in Taff Vale none of the improvements exceeded 10s. On the other hand, Metropolitan fell 3½, District and Midland preferred both dropped 1½ and Caledonian ordinary and deferred were 2 and 1⅛ down.

Yankee Railroad shares were depressed by the very onerous charges exacted at the carry over and by the difficulty of arranging for loans on any terms, which led to a good deal of stock being thrown out for cash. A further cause of weakness was the failure of a New York firm with liabilities estimated at £250,000, who were largely interested in Reading, Great Northern and Northern Pacific. Wall Street had the play all to itself on Wednesday, and although it was said that the urgent liquidation was over for the present, heavy selling continued in Reading and extended to Union Pacific, Illinois Central and Louisvilles, and the market closed in a far from happy frame of mind. Once the account on this side was arranged, however, New York operators braced themselves to the task, and proceeded to hoist Union Pacific and Atchison, but they did not succeed in wiping out the earlier losses, and a considerable number of securities showed declines ranging from small fractions up to 1½, while Great Northern preferred and Northern Pacific both dropped $15, and Reading ordinary were over $4 to the bad. As stated above, borrowers found it extremely difficult to arrange their accounts, and a good deal of business was left undone when the market closed for the holidays. Very little money was to be had inside the House under 11½, while the general rate was about 12 per cent., and both on Monday and Thursday borrowers were bidding as much as 9 per cent. at the banks and up to 15 per cent. in the market for the necessary accommodation. Very large amounts of stock have recently been transferred from New York to this side, and it was said in some quarters that a considerable proportion had been sent back through inability to find lenders, but by Thursday afternoon all seemed to have been finally arranged. Except for Milwaukee, which rose 2½, making-up prices were all decidedly lower, the heaviest loss being a drop of $30 in Northern Pacific common. Reading fell 9½, Union Pacific 7½ and Illinois Central 5, New York Central and Norfolk common receded 4½, Atchison ordinary 4¼, and declines of 2 to 3 were shown by Chesapeake, Erie, Louisville, Ontario and Southern Pacific.

In addition to its own securities Wall Street has been interested in Canadian Pacific shares, and was mainly responsible for the recent boom, so that it was hardly to be expected that these shares would escape the general set-back. They, however, resisted the adverse influences better than might have been anticipated, and with the revival of activity on Thursday were hoisted a little in face of another disappointing traffic return. Grand Trunk stocks are quite out of the current, and therefore uninteresting. Amongst South African things New Cape Central debenture issues were heavy and Mashonaland first mortgage debentures weak. The account open in Canadian Pacifics is almost as unwieldy as that in Yankees, and money on them could not be obtained under 10 to 12 per cent., and even on Grand Trunk and other colonial things the rate was about 8½ to 9 per cent. On the fortnight Canadian Pacific shares were $2 down and Grand Trunk stocks showed losses of ½ to ½, but Quebec and Lake St. John income bonds rose 4. Amongst Indian Railways Bengal and North-Western ordinary gained 1½ and Burma and Madras put on 1 each, but East Indian deferred annuity "D" dropped ½, and Great Indian Peninsula annuities were ¼ lower.

A little revival of interest was apparent in the Argentine Railway list, Buenos Ayres and Pacific ordinary being notably higher, while a considerable number of the others, including North-Eastern ordinary, several Buenos Ayres and Rosario issues, Buenos Ayres Great Southern, and East Argentine were lifted £1 or more. Buying was also resumed in United Railways of the Havana ordinary stock, and San Paulo ordinary too was accorded a little support, but Uruguay things were mostly lower, and Guayaquil and Quito junior bonds also gave way. Mexican Railway issues flinched on the contradiction by the secretary of the company of the stories about a reorganisation of the capital. Contangos in this section were much the same as on Colonial Rails at 8½ to 9 per cent., with a very modest account to be arranged. Changes on the fortnight were mostly adverse, Argentine issues in particular being decidedly heavy. North-Eastern preference fell 2¼ and the ordinary debentures 2¾, Buenos Ayres and Rosario stocks lost 1¼ to 2, Buenos Ayres Western ordinary and 4 per cent. debenture stock 1¾ and 2, and Cordoba and Rosario first preference 4½. Cordoba Central preference and first debenture stocks dropped 2 to 3½ and the income debenture stock 1½, and Entre Rios ordinary and preference were 1½ down, the only important gain to set against these being in Buenos Ayres and Pacific ordinary shares, which rose 1⅞. Mexican second preference was 1½ up, but none of this company's other securities moved to a degree worth noting. Guayaquil and Quito bonds dropped 3½, Paraguay Central debenture stock 2½, Antofagasta deferred ordinary 3, San Paulo ordinary 1½, and Uruguay Northern preference 2.

Miscellaneous markets have not had time to develop any real activity, but a cheerful tone prevailed at the end of the week, and some of the special favourites again received moderate attention. Before the holidays the tendency was rather undecided, and here and there prices showed some reduction, Hudson's Bays, for example, being knocked back to 116 by the high contango rate, but they recovered again before the end. Pekin Syndicates and allied shares kept fairly steady, and a few other land descriptions showed trifling improvement. Iron and steel issues were supported in a small way, and Workington, Rhymney Iron and Thornycrofts closed better. Darracqs, Humbers, Argylls and Components were all better in the Motor

and Cycle group, and Dunlops ordinary and deferred likewise showed small gains. Anglo-American deferred stock, which had been affected by stiff contangoes, soon began to pick up again, and Telegraph securities generally were inclined to recover from their recent weakness. London General Omnibus stock did not show further loss, and there was nothing of any importance in the Traction group with the exception of a sharp rise in San Paulo Tramway shares. Nitrate shares were inclined to rally in several instances, and the issues of the United Alkali Company again went up. Lyons shares had a sharp improvement to 6⅝, but other Catering issues did not show change, and Sweetmeat Automatics were distinctly dull at about 16s. James Nelsons were better in the Meat group, and Eastmans kept steady. Textiles were still very strong, and most of the companies are evidently still doing very good business. Changes in the Brewery division were not of particular importance, but a few debenture stocks continued to improve. The account open in these departments is said to have proved comparatively small, but rates were naturally higher all round. On the majority of stocks and shares the charge was about 8 to 9 or 10 per cent., but in exceptional cases rather higher figures were exacted. In the making-up list there was a rise of 7/16 in Coats ordinary shares, but the preferred showed a loss of 15. Consolidated Kent Collieries were up 2s., English Sewing Cotton showed a rise of 1s. 6d. and Allsopps ordinary and preferred stock were each 1 better, but the 3½ per cent. and 4 per cent. debenture issues fell 1½ and 2 respectively. Bieckerts Brewery ordinary was down 3, St. Louis Brewery preference fell 1 1/16, Watney Combe preferred 3 and the deferred 2, Hudson's Bays made up 4 lower, Pekin Syndicates were ¾ worse and the ordinary 5 down, while Anglo-American Telegraph stocks were ½ to ¾ lower. Eastern Telegraph was 2 better, and National Telephone deferred ½ down. In Apollinaris ordinary there was a loss of 3/8, and in the preference of 7/16. Barnum and Bailey dropped 5s. 3d. in consequence of the poor report showing that no dividend can be paid, and several nitrate shares were again lower, Lautaro being prominent with a drop of 1 1/16. Hope Brothers ordinary shares were 7/16 down, and Fraser and Chalmers lost ½.

The Stock Exchange settlement has been carried through with no other discomfort than very dear money. That does not produce a crop of failures as long as prices are kept up, and they are kept up wonderfully. People have been paying 6½ to 7 per cent. for account to account loans on the best classes of trustee securities indicating a ravenous lack of means, but that makes no difference, and as long as prices can be held aloft who cares for high rates and stiff contangos? There was some buying to-day in the Diamond share market, with a further advance in quotations, and it was only the gilt-edged markets that seemed listless. The lighter the Yankee Railroad share the easier was it to keep up in the air, and prices of most of that class of counter left off near the top. Very little business went on in the general markets, although the tone there was also better, or at least calm. Further insurance amalgamations are discussed, and are very likely to be carried out.

MINING NEWS AND NOTES.

**** Frank and unbiassed answers are given to all questions relating to Mines. Address Editor Mining Section and enclose* One Shilling *for each question asked. No bucket shop circular or advertisement should ever be responded to without first consulting the* Investors' Review.

The Kaffir Circus has not ended the week so promisingly as it began it. On Monday it looked as if we were in for a smart revival, notwithstanding the dearness of money and the nineteen-day account, but the speculators have not been able to keep prices uninterruptedly moving upwards. After the holidays hesitation was manifested in awaiting the decision of the Bank of England directors, and prices gave way slightly in the morning. On learning that the rate was not to be raised, a certain amount of relief was felt, and prices quickly recovered. In the majority of cases, however, they only rallied to Monday night's closing figures, though here and there a gain of 1s. 3d. or 2s. 6d. was noticeable. Paris was said to be in mental trouble over the dearness of money there, but this notwithstanding some buying orders came both from that quarter and likewise from Germany, though it may well have been English support, all the same. Modderfonteins have been taken in hand again by the gamblers and show a substantial advance, but this was quite an exceptional movement.

Rhodesians have not shared in the improvement in the neighbouring section, for the report of the Rhodesia Exploration Company has made a very bad impression, quite damping the ardour of the impecunious enthusiasts. It was far from a pleasant experience for operators to return to the market to find this dismal exhibit staring them in the face and to learn at the same time that the directors of this leading concern intend to abandon Rhodesia altogether. This must be taken as a tacit admission that they expect no good to come from this golden land, even though the company be deeply committed to the Banket adventure. In fact, they mean to clear out of South Africa altogether, to shake its mud from their shoes, and to seek their fortunes elsewhere. We wonder where? Not Siberia, surely? It may be, for the affairs of the company are getting desperate and desperate acts must be attempted.

The best market has been that for De Beers, which have jumped up nimbly enough another £1 or so. It is said they have been in demand from Paris on behalf of option-givers, who expected to be required to deliver stock in connection with the maturing of calls yesterday, which was option day on the Bourse. Vaal Rivers were erratic, Premiers and Jagers steady.

West Africans show little life, but Australasian things have moved up here and there, in particular Loddon Valleys and Mount Morgans. Siberians are quiet, and Indian shares steady.

The liveliest section in the entire Mining market is again the Copper, where Rio Tintos are soaring far ahead of all rivals. This is not the effect solely of a further moderate rise in the price of the metal. Paris is said to be a buyer, also Brussels, but whatever the source, it is quite effective in driving up the price to levels never previously reached. Manipulation is undoubtedly going on simultaneously and is done very cleverly indeed. Anacondas have improved to a quite modest extent in comparison, whilst other leading Copper shares are just firm at previous quotations.

United Rhodesia Goldfields.—This is another deplorable failure to be numbered amongst the dozens that come from Rhodesia. The company has further decreased the number of its claims and has continued the policy of leasing some on tribute. One mine, the Inez, crushed uninterruptedly throughout the year to July 31, but it has, apparently, a very short life. In some cases the results from the subsidiaries have been fairly satisfactory, but in others anticipations have not been realised, which is anything but astonishing. The revenue, all told, was only £12,875 in the twelve months, but expenses were £20,457, leaving a nett loss on working of £7,582 and raising the debit balance to £47,616. This, however, is quite insignificant in comparison with the tremendous loss through depreciation, which is no less than £480,856, and in all probability this is after putting the best valuation on the assets. What do the directors intend to do with this state of things? "We must face it," say they, quite bravely, but by transferring it to a suspense account they do not act so bravely. There are some gilt-edged investments amounting to £39,225, all of which, together with £85,344 shares and debentures, are lodged as security with the bankers and the Charter Trust. Then there are debtors for £39,843, chiefly subsidiary companies, but how much of this sum is good and recoverable? Very little, we fear. Cash is a beggarly £630. In spite of experience, the directors take the £42,500 in debentures and £64,056 in shares of the Jumbo Gold Mine, and the £61,623 in shares of the Mayo Development at cost, for, so they argue, the market quotation for both these holdings is quite nominal, and bears no relation to their intrinsic values. Indeed! What are their intrinsic values, pray? However, we need not question that the company is grossly over-capitalised at £660,900, with debentures for £150,000 and creditors for £48,500.

Messina (Transvaal) Development Company.—In a report upon the property by the consulting engineer, Mr. J. M. Calderwood, he remarks that owing to the continued shortage of native labour, both output and development work during the month have been curtailed, and a much larger number of natives could be worked for the number of whites employed. Serious efforts have been made to secure additional natives in Rhodesia, Pietersburg and Johannesburg, but without success. However, he is able to send a little hopeful news of development. For instance, the crosscut north from Air Winze has exposed an ore body 3 ft. 6 ins. wide, containing 23.05 per cent. of copper where struck, and he says that indications are promising for a parallel lode to the north. In his opinion this new development adds considerably to the prospects of the mine. But we fear it does not ensure success, for all that.

Kaneika United Goldfields.—Mr. Marten, one of the directors, and the company's solicitor have returned from St. Petersburg, whither they went to complete the transfer of the properties taken over, whilst Mr. A. Chotimsky has gone to Siberia to procure the local registration of the properties in the names of the company's nominees. It is reported that the development of the reefs in certain of the properties has been taken in hand and will be vigorously pushed under the advice of the consulting engineer. Necessary arrangements have been made for securing an adequate supply of labour, which is said to be readily obtainable in the district. Good progress is being made with the con-

struction of the two dredging plants which have been ordered, the work being supervised by the company's engineer.

NIEKERK, LIMITED.—There is trouble and heart-burning in the board room of this company, for a shareholder, by name Mr. W. H. Fisher, is agitating to remove some of the directors in order to elect others in their place. Whether or not he modestly proposes himself as a candidate we do not know. Anyway, the directors say he is the registered holder of only 200 shares, while they themselves directly represent 58,868 shares, and a much larger number indirectly through their friends. So "they consider that the interests of shareholders will be far better served by directors who have proved their *bona fides* by subscribing for substantial blocks of shares in the reconstructed company than by others whose holdings are comparatively insignificant." And there is something in this contention. By a most extraordinary coincidence, however, after years of failure a cable was received the first week in December announcing that payable ore had been struck during the drilling operations, and the directors are now awaiting a letter from the mine giving full particulars of this strike. However, the directors are compelled, so they say, by the articles of association to convene a meeting immediately, "at a time of year that may be inconvenient to many shareholders, without any report from the manager to lay before them as to the present position at the mine, and without adequate particulars of the recent discoveries." It is terribly distressing, all this, and we fear it must have been a sad Christmas for the directors, who must have felt deeply sorry for shareholders asked to attend a meeting on the day following Boxing Day, or to send in their proxies not later than Christmas Eve. For our part we are not at all deeply concerned in this little tea-cup storm, and care not whether it will calm down or swamp the saucer. We still think, in spite of timely discoveries, that it would be better for all in the long run if the company went into absolute liquidation.

ANGLO-FRENCH MATABELELAND COMPANY.—This Rhodesian company still fails to make ends meet, and the prospect, instead of improving, seems to be getting worse. In the past 12 months 4,357 tons were milled, producing only 1,618 ozs., of a value of £6,777, and other income was received from interest, hut taxes, &c., despite which a loss of £5,354 was made, increasing the debit to £6,813. Liabilities are heavy at £12,450, against which the resources are tiny, if we except the debentures and shares held of a book value of £110,765, but these could obviously not be realised to advantage in the present state of the Rhodesian market. So it looks as if reconstruction, or some other method of "rehabilitation" will have to be resorted to before very long.

DAGGAFONTEIN GOLD MINING COMPANY.—Although the income from interest, transfer fees, and rents amounted last year to £2,638, the expenditure exceeded it by £652, so the balance-sheet is now weighted with a debit of £8,443. The company has investments in Consols worth nearly £59,000. Boring operations having been finished, the directors are looking for a suitable spot for the sinking of a shaft, which may entail a large increase of capital, or reconstruction, later on.

DAGGAFONTEIN PROSPECTING SYNDICATE.—Interest to June 30 amounted to £774 and transfer fees to £18; total £792. Expenditure was £1,033, so the loss was £241, increasing the debit to £664. Short loans are £10,028 and cash makes up to £3,217, which will enable the company to struggle on awhile.

SANSU MINE.—News of an unpleasant complexion comes from the directors of this Jungle company, to the effect that, owing to the necessity of having to provide a considerably greater amount of new machinery at the mine than was anticipated, development has been retarded. So far the results of development work have not been so good as the early history of the mine gave some reason to expect, whilst the ore at present developed is insufficient in quantity and quality to warrant the commencement of regular crushings, with the view of yielding continuously any margin of profit for distribution. On the other hand, the financial position of the company will not permit of carrying on development work unless all the costs are covered by revenue from the mine. It is imperative, therefore, in order thoroughly to test the possibilities of the property, that crushing, in such quantity as may be found expedient, shall be continued, in order to provide funds for further development. It is not proposed, however, to produce more gold than may be necessary to cover expenditure. By adopting such a policy it is expected that revenue from existing ore reserves will continue long enough to test the property thoroughly, and it is hoped that by the time these reserves are exhausted other bodies of ore will be opened up.

ASHANTI LANDS.—Since the report issued a year ago the directors have undertaken no new business, but have mainly occupied themselves "with the advancement of the interests of the subsidiary companies." The issued capital has been increased to £152,222 by the allotment to the shareholders of the Ashanti Company of 17,972 fully-paid shares, this being the agreed consideration payable on the absorption of that company, in accordance with the agreement of March 23, 1905. The only income received was £1,939 from interest and commission. Ordinary expenses took £2,130. Depreciation on "investments" amounted to £8,314, but the directors deduct from this the sum of £1,504, which is the proportion of the liabilities of the Ashanti Company taken over for fees due to the directors, but now waived. This made the nett allowance for depreciation £6,809, and a loss of £7,000 is shown. In the report it is explained that the debit arises from the revaluation of the holdings on the basis of the market prices at the end of November. As the previous deficit was £29,558, the total is the present balance-sheet is £36,558. Investments are valued at £119,277, but a portion of these is probably in pawn at the Bank for a loan of £10,000. Cash stands at £1,657 and debtors owe £44 against £1,361 owing to creditors. An immediate improvement in the finances looks anything but hopeful, and reconstruction would be no surprising event sooner or later.

OROYA-BROWNHILL COMPANY.—An important circular is issued by the directors of the Oroya-Brownhill Company, in which they announce that they have entered into an arrangement with the Central and West Boulder Gold Mines for the Oroya-Brownhill to work the Central Boulder lease (which adjoins the Oroya South Block) from the Waddington shaft. This lease forms the deep level of the Oroya South Block, and development work in this at the No. 9 level during the past year is said to have indicated the possible extension of the ore bodies into the Central Boulder lease. In addition, the extension southwards of the Tetley lode (now being worked on the property of the Associated Gold Mines of Western Australia) is expected to be found in the Central Boulder lease. The terms of the agreement provide that the nett profit, after payment of 7½ per cent. thereof to the associated company, shall be divided equally between the Oroya-Brownhill Company and the Central and West Boulder Company. The directors of the last-mentioned company also issue a circular, in which the following comment is made:—"The directors consider the agreement is one of high promise and of great advantage to this company, as it will enable the company to profit by the immediate development of an ore body which has been recently discovered in the No. 9 level of the Oroya Company's property, and the continuation of which it is believed will be found in the Central Block."

CHAFFERS GOLD MINING COMPANY.—The report submitted by the directors covers a period of twenty months, from the date of reconstruction in February, 1905, to September 30 last. Total expenditure during this time amounted only to £7,443, but the income was considerably less at £1,144, leaving a balance on the wrong side of £6,298. The policy pursued by the directors is to curtail expenditure on the property as much as possible until the time comes when developments on adjoining mines justify the company in prospecting its own ground at depth. Remunerative work, this! The company was formed originally in 1895. It is now eleven years old, has never paid a dividend and cannot hope to pay one, if such good fortune should ever favour it, for many years to come. It was mentioned in a circular issued in September last that the directors of the Boulder Main Reef Company, having sunk their main shaft to a depth of 1,750 ft., granted the Chaffers Company permission to put in a crosscut from their workings at the 1,700 ft. level, and on November 21 the following cable was published:—"Crosscut to lode located by diamond drill, 1,700 ft. level, Great Boulder Main Reef. Lode is 60 in. wide, average assay value for full width, 8 dwts. per ton. For a width of 14 in. lode shows average value of 22 dwts. per ton. Think it is extension south No. 1 lode." This news the Chaffers directors consider "highly encouraging," and should further developments from the crosscut prove a continuation of payable ore, the advisability of the company sinking its main shaft to a depth of 1,750 or 2,000 ft. will have to be considered. As already advised, the general manager, Mr. Cape, made an extended tour of inspection through Western Australia and the Eastern States, also North Queensland, but did not find a suitable property.

BRILLIANT GOLD MINING COMPANY.—In the early years of its existence the Brilliant Gold Mining Company, of Queensland, in large measure gave some justification for its title, for it paid dividends upon its capital of £520,000 aggregating £622,187. But since 1902 it has made two distributions only, of 3d. per share each, the last in 1904. The Brilliant mine is now let on tribute, and there are 20 parties working, averaging about three men to the party. In the half-year to October 11 these tributers raised and crushed 1,880 tons of quartz for a yield of 2,238 ozs. of smelted gold, which, with residues, realised £9,045, from which the company received for tribute percentage the sum of £1,603 and for hauling charges £234, total £1,837, an increase of £137 on the previous term. At the Stockholm mine development work in opening up this property has been pushed ahead, but the results have not quite come up to expectations, the reef cutting out in the south level at 125 ft. from the crosscut, making the width of the chute of stone 140 ft. with an average thickness of 4 ft. The rise, which is now up 70 ft. in a good body of payable stone, will soon be connected with the straight shaft, when good ventilation will be secured and stoping will then be proceeded with to advantage. The north level at the 614 ft. flat was driven 50 ft. in the footwall of a very large reef formation. A crosscut towards the hanging wall has been driven 70 ft., and three veins of quartz have been met with, the third since the manager's report was written. The last vein is 12 ins. thick, and two assays gave respectively 2 ozs. 1 dwt. 16 grs. and 11 dwts. per ton. This vein is declared to show good promise, and will probably be beyond the end of the main crosscut. Considerable additions have been made to the surface appliances, the air compressor has been duplicated, an additional boiler is being added, and a change house for the men has been built.

MILLS' DAY DAWN UNITED MINES.—Revenue in the half-year ending October 15 amounted to £89,140, and the ex-

penses of all kinds absorbed £44,116, leaving a profit of £45,033. Out of this £30,000 was distributed in dividends, £1,500 went in income-tax, and £1,562 was paid in calls on the company's holding in Pfeiffer's Day Dawn Gold Mines, the balance being carried forward. At the commencement of the term the credit, inclusive of stocks on hand, stood at £9,914, and the present balance-sheet shows bullion and cash £20,419, stocks on hand £477, and untreated sands £1,075. Nothing has been written off property account for the cession of the lease, and the value of the shares has consequently been allowed to remain in the books. During the current term the direction of operations will be towards the development of the shallower eastern ground above the No. 6 level and the extension of No. 10 level into an undeveloped area, the exploration of which will occupy the greater part of the six months. It is expected that the output will probably increase to 4,000 tons per month, whilst the development of the mine is to be maintained in adequate proportion to the output. The directors look to the company being able to pay the usual quarterly dividend and a substantial bonus.

Hampden Cloncurry Copper Mines.—The shares of this new Queensland company, which was formed in Melbourne last March, have recently been mentioned frequently in one or two daily financial papers. They have obviously been "introduced" quietly during the copper boomlet, and the easy way in which the price has been pushed upwards suggests that the market for them is very narrow. Much cannot be expected in the short period of eight months, which is the term covered by the present report and accounts down to August 31, and no disappointment need, therefore, be felt at the poor financial results. The whole income reached £389 only, of which £345 came from interest on deposits, nor do we see much probability of this being appreciably augmented in the near future. Only recently shaft sinking was started, and considerable delay has arisen here already in consequence of the difficulty of obtaining suitable shaft timber locally. It will be some time also before a smelter can be erected. A suitable site is said to have been selected, and the application for it is now under the consideration of the Queensland Government. But a commencement will not be made with the erection of the smelters until the railway is further advanced. This is being pushed on rapidly, the directors tell us, and they have the assurance of the Government that there will be no break in the advance. In the meantime arrangements are being made for the extraction and sale of the ore from the Duchess mine, the first consignment of ore at grass having already been made to the Wallaroo and Moonta Smelting Company, estimated to average 35 per cent. of copper. As the expenditure on all counts absorbed £2,457, the loss for the six months was £2,069, which is the company's start on its career.

North Broken Hill Mining Company.—A cable to the following effect has been received from the head office at Melbourne:—Dividend of 2s. 6d. per share and bonus of 1s. per share, amounting to £24,500, have been declared, payable on January 18. The surplus available at date is £59,000; in addition the De Bavay Company will pay £11,000 under the new tailings contract. Winze from the 800 ft. level has intersected the lode, as expected; assay 20 per cent. lead and 10 ozs. of silver per ton.

Cobar Gold Mines.—The report of the directors covers the period of two years to September 30. From October 1, 1904, to the end of April last 24,613 tons of ore were milled and 19,809 tons of tailings and 12,215 tons of slimes were treated, producing 17,433 ozs. of gold, realising £54,934. After writing off £22,520, the cost of the development work in the two years, and £10,420 for depreciation on plant, machinery, &c., there is a credit to the profit and loss account of £45,774. The estimated quantity of copper ore on hand is 9,921 tons. No. 3 level has now been driven 1,194 ft. north, winzes have been sunk to meet the No. 4 level, and crosscuts have been put in east and west. No. 4 level has been driven 513 ft. north and 348 ft. south, and crosscuts are being put in east and west. It has become necessary to supplement the existing milling plant by the adoption of a treatment process capable of recovering the copper from the sulphide ores now being met at depth in the mine, as well as the gold and silver. Successful preliminary experiments have already been made, and in order to confirm these, various tests on a working scale are in hand under the supervision of Messrs. Johnson and Sons' Smelting Works, Limited.

Straits and General Development Company.—This is a concern not widely known amongst the public, and it hardly deserves to be. A director of it is Mr. Alfred Gaussen, who has made himself so prominent in recent weeks by his vigorous opposition to the policy of the directors of the Henderson's Transvaal Estates in getting rid of that company's large holding of Consolidated South Rand Mines Deep. After reading the report of the Straits Development Company we can better understand Mr. Gaussen's action, though we can hardly sympathise with it out of our regard for the interests of the Henderson's shareholders, for the principal asset of the Straits company is its holding of 59,153 shares in the Consolidated South Rand Mines Deep, and, naturally enough, Mr. Gaussen would like these to be ever so much more valuable than mere rubbish. The last making up price was 2s. 6d., but, of course, they could not be disposed of even at this figure. If the majority of such shares could be held firm by such a company as Henderson's Transvaal Estates, there might be a chance of them appreciating a few pence more after the lapse of time, but Henderson's is well rid of them, and this justifies the more strongly the action taken by the majority of the board of that company. In the balance-sheet of the Straits Development the so-called "investments" are entered at £67,399, "taken either at valuation for reduction of capital or cost," but the auditor says this paper shows a depreciation of no less than £38,356. How the directors propose to meet this grave position we do not know, for they do not tell us. The actual income in the 15 months to September 30 consisted of £816 from underwriting commissions and interest, £20 from rent and £3 from transfer fees. But the expenditure took £1,480, including £461 interest on a loan, so the loss was £641, raising the accumulated debit to £1,595. Loans and interest of £5,555 on the debtor side of the balance-sheet is off-set by loans and interest £5,936 on the creditor side, but cash is only £241, and debtors owe £1,045. The directors make practically no illuminating comment on the position of the company beyond the following:—"The control of the Consolidated South Rand Mines Deep has, by reason of the sale of a preponderating block of shares, passed into other hands, and the interest of this company therein is left without any representation. Your directors hope that the cash assets of that company will be carefully preserved, and that when the time comes for dealing with the claims, your interest will be found to have been safeguarded by the newly appointed directors." Well, it is to be hoped that the cash assets of the Straits and General Development Company will also be carefully preserved, and they will need some skilful eking out. Another asset comprises the Vlakfontein claims, but no work was done on them during the period reviewed. What hope is there for this distressful company?

Sangli Gold Mining Company.—A circular has been issued to the shareholders of this Indian company reminding them that in addition to the Sangli State lease the company possesses various other blocks of land in different parts of the Dharwar gold field, many of which are believed to be valuable. In conjunction with the Goldfields of Dharwar the directors have recently successfully negotiated with the Champion Reef Gold Mining Company of India for the grant to the latter, for a period of three years, of a joint option of purchase of two blocks of land, viz., from the Goldfields of Dharwar 144 acres and from the Sangli Company 708 acres. In consideration for these the Champion Reef Company is to pay £5,000, to be apportioned between the two vendor companies as follows:—As to one-fourth—£1,250—to the Goldfields of Dharwar, and three-fourths—£3,750—to the Sangli. Should the option be exercised, the £5,000 is to be considered as a deposit only, to form part of the subsequent purchase consideration, which will be £70,000, payable £30,000 in cash and £40,000 either in fully-paid Champion Reef shares, or in cash, or in fully-paid shares in any new company that may be formed to work the properties, Should a new company be formed, its capital is not to exceed £250,000, of which £75,000 shall be working capital.

United African Explorations.—A circular has been sent out by the directors reminding the shareholders that at the last annual meeting of the company they explained that, owing to the depressed condition of markets, they had not thought it expedient to realise any of the company's holdings, and on that account were reluctantly compelled to suspend the June dividend. We are somewhat surprised to learn from them, however, that a revival has since taken place, which has favourably affected some of the principal assets and justified their realisation. So the directors have declared a dividend of 10 per cent. They further tell us that new business of "a sound and profitable nature has been undertaken, and the assets of the company are well distributed in loans against security and various promising undertakings." We hope there will be no disappointments in store.

Copiapo Mining Company.—Here is a copper company which, in contrast with most copper companies that have benefited considerably from the rise in the price of the metal, made a heavy loss in the year ending June 30. This amounted to no less than £2,730, after taking credit for £4,920 brought down, and transferring £10,000 from the reserve fund. During the year the directors made a complete review of all the details connected with the business of the mine and its affairs, and sent out two gentlemen—a consulting engineer, Mr. Archibald Stark, and an accountant—to go into the various aspects of the business. Mr. Stark reported that there were 48,247 tons of ore in sight at Dulcinea, of an average value of 7.4 per cent. copper. He estimated the dump at the mouth of the adit to contain 60,000 tons of low-grade ore, the average sample of which was 4.7 per cent. copper, figures that practically agreed with those given in the general manager's report. So after considering the present method of picking and sorting, and acting upon the repeated recommendations of Mr. Holberton in previous years, the directors have made up their minds to instal a smelting plant. A site has been secured, and plant capable of smelting 100 tons of ore per day has been shipped, operations to be started as soon as possible. By means of this step the expense of picking and sorting is eliminated, as the ore goes direct from the mine into the furnace. It is estimated that with the present plant, capable of smelting 100 tons per day, some 1,600 tons of fine copper should be produced annually. Last year the total output from all the company's mines was 8,142 tons, with an average copper contents of 10.99 per cent., against 9,215 tons and 14.54 per cent. in the previous year. Stocks of ore have now been valued at cost of extraction and transport charges only, instead of following the practice hitherto adopted of valuing the stocks at the market price on the last day of the financial year, so the profit on the ore will all go to the year in which it is realised. In the

previous accounts the plant, machinery, and engines account amounted to £22,253, and £3,512 has since been added. From this has been written off the value of the old and useless plant, £6,631, bringing the account down to £19,134, which depreciation further reduces to the present figure of £16,224. The Ojancos group has been closed down, but the future development of it is not to be forgotten by the directors, who think it may be more profitably worked by smelting the ore at a future date. At the mine the staff has been almost entirely reorganised. So the company may do better in the future than in the past.

EAGLEHAWK CONSOLIDATED.—According to the half-yearly report ending September 30 previous returns have been maintained. Some 6,098 tons of stone were treated for a yield of 3,193½ ozs., inclusive of returns from slimes and sand treated by cyanide, and 189 ozs. from copper plates. In sinking the winze from the bottom of the north shaft payable gold was met with. This development the directors consider satisfactory, and the connection made has given thorough ventilation throughout the mine and places the company in a position to test fully the northern portion of the lease. The mine manager writes:—"I may state that the value of the property has increased considerably, owing to the good prospects obtained in the north shaft, which is being well maintained. Other chutes of ore may be met with in the different levels being extended north, and I have no hesitation in saying that payable returns are assured for some considerable time."

WEST KITTY AND PENHALLS UNITED.—The report of this Cornish company submitted at the statutory meeting at St. Agnes, states that the total number of shares allotted is 44,000, of 10s. each, of which 24,000 are fully paid up in part payment for the properties and of the underwriting expenses, the remaining 20,000 shares being allotted for cash. The total amount of cash received by the company in respect of the shares issued wholly for cash is £3,972. Receipts on capital account to the date of the report amounted to £3,972, and the payments to £1,250. All the preliminary expenses were paid or are payable by the vendors of the property to the company.

BRITISH DREDGING COMPANY.—The directors issue their second report, and it can be said at once it is an improvement upon the first, which dealt with a period of two years, and showed a loss of £9,000. The new report covers 14 months, in which period a profit of £10,100 was earned, so that the previous debit is quite wiped out, and a small surplus is carried forward. No distribution is made either upon the ordinary or preference shares.

GOLDEN PIKE AND LAKE VIEW EAST MINES.—Money is still going out, and very little coming in, and it is impossible to foresee the day when incomings and outgoings will balance. Development is the work in hand, and while this is proceeding the ordinary administration expenses to September 30 amounted to £2,240, and transfer fees, interest, &c., brought in £232, leaving a deficit of £2,008, which raises the debit to the high figure of £39,295. As the company has still over £4,900 in cash this will enable it to go on awhile. During the year the leases were held on the half wages, half tribute system. On the Lake View East lease a leader, 6 inches wide, and worth about ½ oz. to the ton, is being followed, but this is obviously too small to pay unless it should widen out. Advices have been received as recently as this month that 20 tons of picked stone have been taken out by the tributors from this leader, giving a return of 80s. 5d. per ton. A large amount of work was done on the north end of the lease in the hope of cutting the lode worked by tributors on the Central Boulder, but though a formation carrying traces of gold was cut, nothing payable could be found. On the Golden Pike Lease the small quartz leaders, which run across the main lode channel, have been sunk and driven upon, but so far without success. The Great Boulder Company have driven on the Ivanhoe East lode at various depths with good results and a lode has been proved identical, it is said, with the Golden Pike Main Lode, so developments at further depth will be followed with the greatest interest. "The work being done on the Great Boulder and Hainault leases is, the directors say, gradually proving the payable ore nearer to our boundaries, but no work is yet sufficiently advanced to warrant our undertaking extensive development at present." Meanwhile, the present policy of holding the leases on the half wages, half tribute system is being continued, this being the most economical method of manning the leases.

OROYA EAST (HANNAN'S) GOLD MINE.—During the earlier part of the past financial year a considerable amount of work was done on the property by tributors, who finally located a chute of pay ore near the western boundary. A shaft was sunk to a depth of 40 feet, and the lode was driven on for 39 feet north, when the chute cut out. On the expiration of the tribute a crosscut west from the No. 5 shaft was put in at a depth of 100 feet, but it was found that the reef had disappeared. Similar experience seems to have been met with elsewhere, so prospects look quite dismal. The total quantity of ore crushed in the twelve months was 577 tons, yielding 237 ozs. of gold of a value of £998, and £43 was received for tailings and concentrates. Interest and transfer fees gave £78. Nett loss was £1,338 and the debit is now £25,455, a pitiful state of affairs. Nothing of moment is owing to sundry creditors and cash stands at £1,040, a little less than the balance of £1,965 due to the vendors. The future really looks hopeless. A fresh tribute, on the half-wages, half-tribute system, has been let, as it has been found to be the most economical way of developing the property.

GOLD FINANCE COMPANY.—This company's experience is still of the sad and unfortunate kind, for the wealth it once possessed in the shape of paper is gradually dissolving into mist. In the year to June 30 the income from "sundry" sources amounted to £1,485, and the expenditure totalled £2,235, inclusive of £3,242 allowed for depreciation on shares held, so the loss was £750 to be added to £33,024, making the aggregate debit £33,774. Assets consist largely of mining shares, principally in the Cosmopolitan Proprietary, the Bellevue Proprietary, and the Consolidated Gold Fields of South Africa, so they are not an impressive lot. Not satisfied with these, however, the directors have been attracted by the rubber industry and have acquired a one-third interest in a concern called the Kuranda Rubber Company, which has a property in Ceylon. As for the Bellevue Proprietary its finances are very strained, so much so that it cannot vigorously develop its property. Current liabilities of the Gold Finance Company are only £245, against which it has £1,640 in cash and £2,267 owing by sundry debtors.

ANGLO-CONTINENTAL GOLD SYNDICATE (1899).—Income in year ending June 5 amounted to £43,150, and a profit of £35,779 was earned, which has had to be applied in reducing the adverse balance brought in to £18,957. The directors have turned their attention to Mexico, and arrangements have been made for the permanent representation of the syndicate there. Early in the present year they acquired an interest in a company owning a silver-lead mining property in the State of Zacatecas. It is expected that in the course of a few months the developments will have reached such a stage as to justify the sale of the group to an English company. The syndicate has increased its holding in the Chinese Engineering and Mining Company, has acquired shares in the South-West Africa Company, and still has a large holding in the British Borneo Exploration Company.

HUTTI (NIZAM'S) GOLD MINES.—Sales of gold in the financial year to September 30 amounted to £51,575, almost the same as in the previous year, £51,617. A larger quantity of quartz was crushed, however, and the gold recovered from the tailings was 3,165 ozs. Thus there was a slight falling off in the average value of the ore, but the report says the lower levels of the mine have opened up some higher grade stuff. After making provision for depreciation, &c., the nett profit is £14,235, and the directors distribute a dividend of 20 per cent. The 5,000 reserve shares were offered to the shareholders in September at a premium of £1, and about 4,500 have been allotted. A good balance-sheet is presented.

Company Reports and Balance Sheets.

**** *The Editors will be much obliged to Secretaries of Joint Stock Companies if they would kindly forward copies of Reports and Balance-sheets direct to the Office of the* INVESTORS' REVIEW, *Norfolk House, Norfolk Street, W.C., so as to insure prompt notice in these columns.*

BUENOS AYRES GRAND NATIONAL TRAMWAYS CO., LIMITED.

Gross receipts for the year to March 31 of the lines operated by this undertaking, consisting of the original lines and those of the acquired Buenos Ayres New Tramways Company, amounted to £251,283 compared with £216,037 for the previous twelve months. Working expenses, however, went up by £20,392 to £191,580, so that the gain to nett revenue is only £5,856 at a total of £59,704. The Grand National Company's share of these receipts is £45,557 against £40,386, and after payment of London administration expenses, interest on debentures, &c., there is a sum remaining of £6,585, including trifles received for interest on deposits and transfer fees. From this the sum of £2,150 has been transferred to debenture reserve fund and £3,726 to income bondholders' interest account, leaving £500 to be carried to the contingency fund. Including £104 brought forward, the amount standing to the credit of the income bondholders' interest account is £3,830, and it is proposed to pay interest at the rate of 5 per cent. per annum for the year on these bonds, absorbing £3,720 and leaving £104, or the same as the credit brought in. Since the last meeting satisfactory progress has been made with the work of converting for electric operation the joint system, consisting of the lines of this company and those of the Buenos Ayres New Tramways, and on November 30 last there had been converted a total length of 69½ miles. The directors say that no comparative statement showing the benefits derived from electric traction can be made upon the basis of the accounts now submitted, owing to the very small proportion of converted track which was in operation during the period under review and the high cost of operating the remaining horse traction due to disturbance by the reconstruction works. They think, however, it should be mentioned that for the first six months of the current financial year, that is from April 1 to September 30, the nett receipts derived from operating the joint system showed an increase of over two per cent. compared with the corresponding months of 1905. The Bill promoted by the company in the last session of Parliament for the rearrangement of the capital account was duly passed and became law on July 20. This being subsequent to the date on which the accounts are made up, the balance-sheet is submitted in the old form, but in an appendix to the report the directors set out the share and loan capital as rearranged, and as it will be in the future. The changes have already been indicated in these columns, and need not be repeated. The balance-sheet now issued shows a total expenditure for original

construction and equipment after making certain additions and deductions on account of the past year of £1,056,034, while the outlay for electric construction and equipment on joint account amounts to £469,995. This includes £87,750 for discount on conversion debenture stock. A suspense account consisting of a debit to revenue of £129,856 has been dealt with in the new Act, and we note that the company has a good cash balance and other liquid resources, while floating liabilities are by no means overwhelming.

Canada Company.

Although the actual transactions of this company during the eleven months from January 1 to November 30 last were smaller than for the corresponding period, the decline is more than compensated by the increase in the value of the lands disposed of. Land sold outright was 234¼ acres against 4183¾ acres last year, but the price per acre was no less than $27.29 against $3.46. Land let on lease with right of purchase was 5,198 acres at $16.78 per acre, whereas last year the figures were 5,908 acres at $14.12 per acre. Two town lots were sold or leased with right of purchase against nine lots, but the average per lot worked out at $225 against $155.55. The total operations therefore represent 5,432¾ acres at an average of $17.30 per acre, a decrease in quantity of 905½ acres, but an increase in average price of $3.66 per acre. This year's figures mean an increase on the 1894 valuation of $2.88 per acre, against an increase last year of $1.83 per acre. Land leased without option of purchase was 7,920 acres or 4,519 acres less, but the smaller amount produces a rental of $2,396 compared with $1,350. Leased land converted to freeholds represents 5,688 acres, or an advance of 653 acres. Total receipts for the period were £28,611 or an improvement of £1,524, and the directors propose a dividend for the half-year ended January 10 of 14s. per share, being an increase of 3s. against the corresponding period, but still 8s. less than the payment in the year before. The short finance statement issued with the record of land sales shows total funds in hand of £7,798 against floating liabilities of £1,703, showing a balance of £6,096 apart from the capital reserve fund of £8,463 invested in Metropolitan 3 per cent. In addition to the liabilities mentioned there is a sum of £5,362 at the credit of settlers' savings bank account in Toronto, which has been deposited with the company by their lessees to meet the rent and purchase money of the lands occupied by them.

North of Scotland Canadian Mortgage Co., Limited.

In their report for the twelve months ended November 11 the directors say that the past year has been one of great prosperity and important developments throughout the Dominion of Canada, and especially in the N.W. provinces, where extensive immigration continues and previous encouraging prospects remain unimpaired. The company's funds have in consequence been fully employed at remunerative rates, and are being steadily transferred from Toronto to the office in Winnipeg. The gross income for the year, including small receipts in Aberdeen, was about £500 larger at £62,953, from which the expenses of management in Aberdeen took £1,838 and in Canada £8,184. Interest and expenses on loans absorb a further £22,601, and after providing commission, directors' fees, income-tax, &c., the balance over is £26,461. To that is added £6,101 brought in, making £32,562, and the directors again add a bonus of 2½ per cent. to the regular 10 per cent. dividend, making 12½ per cent. in all. The reserve fund is credited with another £10,000, a sum of £237 is put to a special reserve for redemption of debenture stocks, and £3,576 or £2,525 less is carried forward. The reserve fund will now be £145,000 or only £5,000 less than the share capital, and the special reserves come to £3,000. Mortgages on real estate have further increased by a trifling sum to £839,053, and other important assets are investments £21,260 and interest accrued £34,977. The directors say that the foreclosure and interest in arrears accounts are both in a very satisfactory position, and it certainly says much for the management that, although the mortgages are so extensive, the amount of property held under foreclosure is only £861.

London and New York Investment Co., Limited.

This is really a trust company, whose investments had a book value on October 31 last of £780,428. In addition, the company has made loans to various undertakings in America in which it is interested to the amount of £57,157, and at this point we had better turn to the auditors' certificate because it has some rather pertinent observations on these two assets. The auditors observe for example that where the valuations are based on Stock Exchange and other quotations they have satisfied themselves of their accuracy, but a large number, including securities not producing income, and investments of a considerable amount in America, cannot be submitted to this test. The loans to companies in America, in which the corporation is interested, are in relation to one of these investments just referred to, and in respect of such loans no interest has been received. The directors, however, struggled hard to make good this deficiency in the assets, and apply the sum of £25,423 against it, being a profit on realisation of securities brought forward from last year. In addition to this, there is a nett balance on the past year's working of £21,091, and when this has been utilised as well the shortage will be reduced to the comparatively trifling sum of £3,433. Sundry other assets besides those mentioned are small in volume and need not be detailed, but it may be pointed out that the share and debenture capital is considerably less than the total sums invested, and it has been necessary to raise loans and securities to the amount of £85,359. The total income for the twelve months ended October 31, including £11,952 profit on realisation of investments, was £36,853. General expenses of administration, &c., required £2,143 directors' fees came to £1,950, and trustee and auditors' fees were £225. The balance of nett profit still remaining is £32,545 and £1,457 was brought forward, making a total of £34,002. Out of this the interest on the debenture stock requires £2,049, and the half-yearly dividend on the preference shares due on July 1 last took £10,862. After providing these payments a sum of £21,091 is left and has been appropriated in the manner already mentioned. The directors are therefore unable to recommend the payment of the final dividend on the preference shares due on January 1 next, and, of course, the ordinary shareholders can have no return. For the previous year the preference dividend was paid in full, and the ordinary shares received a distribution of 2 per cent. In future the dates for payment of dividends will be altered so that they may run as nearly as possible concurrently with the company's financial year, which commences on November 1. It is the intention of the directors, if the state of the company's business justifies that course, in future to pay an interim dividend on the preference shares for the first six months of the company's year in the month of June, and to defer the payment of the final dividend for the twelve months ended October 31 until after the annual accounts have been audited and adopted. The effect of this will be that four months of preference dividend will be payable to the preference shareholders for the period from July 1 till October 31, 1906, subject to the prior payment of their current dividends, as soon as the circumstances of the company permit.

Investors' Mortgage Security Co., Limited.

This company's capital has been in course of readjustment for some two years now, and in connection with the alteration the directors made arrangements during the twelve months ended September 30 for the payment of £8 uncalled on 23,968 ordinary shares, the holders at the same time paying a premium of 10s. per share. Each share, when fully paid, was divided into one 5 per cent. preference share of £4 16s., and one "A" share of £5 4s., both to be converted into stock. By this plan £191,744 has been received in respect of uncalled capital, and £11,984 for premium. The latter, together with the premium received on the issue of debenture stock, also made during the year, after providing a proportion of the expenses connected with the rearrangement, has been carried direct to the reserve fund. Last twelve months the income from investments was £44,655, an increase of £9,323 compared with the previous year, the result of the further capital introduced, transfer fees amounted to £39, and £2,509 was brought forward, making a total credit of £47,203. Directors' fees, general expenses, and other miscellaneous charges made away with £5,494, and interest on debentures, &c., reached £11,283, leaving a nett balance of £30,426. Out of this the directors provide £10,958 for dividend on preference stock and shares, and £8,766 for two half-yearly payments of 3 per cent. each on the ordinary shares, making 6 per cent. for the year. A sum of £8,279 is then transferred to the reserve fund, and £2,424 is carried forward. Twelve months ago the reserve fund amounted to £60,000, but the additions from premiums and profits bring it to a round £80,000. This is a fairly good accumulation, but the company is, of course, increasing in size and importance. The share capital paid up is now £441,744, and the debenture debt, of which £39,790 is terminable, stands at £331,298. The company's assets almost entirely consist of mortgages and other liens, real estate, American railroad and other bonds, stocks, &c., these, after deducting a certain contingent fund, now appearing at £825,358, an increase on the year of no less than £291,182. Including interest accrued on debenture debt of £4,942, the total owing to sundry creditors is £6,944, but certain balances due to the company amount to £20,796, and interest accrued on investments is £26,587.

New Zealand and River Plate Land Mortgage Co., Limited.

The nett profits of this well-managed company for the year ended October 31 were slightly less than in the previous twelve months, the total of £34,212 showing a decline of £942. The gross income was £49,516, from which the interest and expenses on debentures for the year were £6,425, general expenses £7,849, and taxes and commission, &c., £1,030. With £2,097 brought forward, the nett balance is £36,309, and after providing two dividends of 3½ per cent. each making 7 per cent. for the year, £13,000 is added to reserve, and £2,309 carried forward. The directors are glad to be able to state that the whole of the investments are in a thoroughly satisfactory condition, and their totals differ very little from those shown twelve months ago. Loans on mortgages at the River Plate stand at £593,712, and investments in New Zealand at £4,011. Investments in London, consisting of gilt-edged securities, appear at £66,392, a sum of £10,000 is lent in London at short call, and the cash balance is £36,605. Floating liabilities are quite insignificant and the addition now made brings the reserve fund to £228,000, so that the position of the shareholders is a very enviable one.

Australian Cities Investment Corporation, Limited.

Shareholders of this company will be more interested in a transaction carried through subsequent to the closing of the accounts than in the achievements for the year ended June 30, 1906. It seems that the local directors have entered into and concluded a contract for the sale of the whole of the unsold land on the Kensington estate. The price is £45,000, payable £500

on signing the contract, £9,500 on approval of title, and the balance by annual payments of £5,000 spread over seven years, interest to be paid half-yearly at the rate of 3½ per cent. The company pays commission £3,250, but retains all outstanding balances. Shareholders were informed of this business in October last and the directors now report that a copy of the contract has been received and the purchaser has paid £10,000 on account. To some extent this brings the business of the company to an end, and in view of the altered circumstances the directors have reduced the expenditure in London and at Sydney to necessary office expenses, the board at each end to draw no fees after December 31 next. The subscribed capital of the company being £35,366 in shares of £1 each, the money received from this estate, which has a balance-sheet value of £32,770, represents approximately £1 15s. per share, and the shareholders are distinctly in luck. For the year to June 30 the total revenue brought into the profit and loss account is £4,259, and after meeting all expenses the nett balance is £2,484, out of which the directors propose a dividend of 1s. per share or 5 per cent., carrying forward £715. Thirteen acres of land were sold during the year, realising £4,090, of which £1,649 was received, together with £3,260 on account of previous sales, making a total of £4,910. This is deducted from the estate sales, which were first increased to £18,867 by the land sold during the year, leaving the item at £13,957, which is covered by sundry debtors of similar amount representing land purchases payable in instalments. Sundry creditors are quite trifling, and the balance-sheet shows total cash of £3,408, besides bills receivable of £1,500.

New Westminster Brewery Co., Limited.

In the 12 months to October 19 last the gross profit on brewing earned by this concern was £67,886, and a further sum of £22,822 came in from rents and interest. Against this, however, the rents and interest payable by the company were £12,805, so that with £16 for transfer fees the actual revenue adds up to £77,919. The profit and loss account is a full one, setting out in much detail the various charges which have to come off this profit, and the principal items which may be mentioned are £14,577 for wear and tear and depreciation of leases, £3,932 for repairs to brewery premises, plant, &c., £1,350 for directors' fees, and £1,000 reserved for bad and doubtful debts. Altogether the ordinary charges amount to £39,687, and this year the compensation fund charge has to be met for the first time, requiring a further £1,522, so that under all heads the outgo is £41,209. This leaves a balance of profit amounting to £36,710, to which must be added £2,187 brought forward, making a total of £38,896. Interim dividends already paid absorb £12,000, and after meeting the balance of the preference dividend, the distribution on the ordinary shares is made up to 8 per cent., £7,000 is specially appropriated for sundry depreciations, and £3,896 is carried forward. Magisterial orders have been given for the extinction of three licences possessed by the company, but the amount of compensation has not yet been ascertained nor the consequential loss to be ultimately borne by the company; another example of the difference between book value of licensed houses and their real worth. The best point about the company's finances is the absence of a debenture debt, but to some extent this is balanced by certain loans and deposits, there being a secured loan of £59,742, and deposits of £35,235. Ordinary floating liabilities are comparatively light at £14,219, but we notice on the debit side a suspense account for loans of £20,571. As the total loans outstanding, that is granted by the company, amount to £132,180 we have no doubt that this account will prove useful. If sundry creditors are small debts are smaller still, only £7,698 having to come in from trade accounts, besides £2,521 for rents. Stock on hand, £14,417, does not seem a very large total, having regard to the size of the business, and the cash balance of £3,218 is very short of the sum required for final dividends. Apart from the plant, horses, drays, &c., of £18,472, the property account stands at £378,157, of which £136,099 is represented by freehold beer and public-houses, £226,086 by leaseholds, and £15,972 by leasehold brewery and farm premises.

City of Chicago Brewing and Malting Co., Limited.

There was a trifling improvement in the position of this brewery company during the year to September 30, but both the ordinary and preference shareholders are still a very long way off a dividend. Indeed, it seems very doubtful if payments can ever be resumed until the capital has been brought more in conformity with the earning capacity of the business and the fact that other companies which have properly faced the position have derived benefit from the scaling down should encourage the directors of this concern to try to do likewise. The sales of beer by the American company for the year ended September 30 were 372,573 barrels, being an increase of 8,200 barrels compared with the previous twelve months. This is attributed to the efforts of the managament to open up business in new localities and in pushing the bottled beer trade. The malting business is again described as most unsatisfactory, but the directors think the coming year may produce some improvement. They have therefore decided to defer consideration of shutting down these plants, the advisability of which has been discussed. One of the company's smallest branches, however, known as the City Brewery, where the results have not been satisfactory, has been closed as from September last, and the trade transferred to the West Side Brewery. The directors think that this will effect economies, and therefore materially improve the profits. During the period under review the profits of the American concern were £94,811, or £4,535 more than in the previous year. Interest on investments gave a further sum of £114, and after providing all charges, including interest on mortgage bonds and bankers' and general interest, the nett balance remaining is £16,982. This sum has to meet the appropriation for sinking fund £13,002, extraordinary repairs of £1,437, and £125 written off investments. The balance remaining is £2,418, and this, together with £15,646 brought in, is carried forward. The report sets out a short statement of the financial position at the date of the balance-sheet, which shows the company to possess secured loans of $271,994, sundry debtors and bills receivable $388,537, stock $343,925, and cash in hand and bonds in the treasury $429,512. These add up to a total of $1,433,969, and as the floating liabilities on the same date were $264,580, there is a balance of what the American calls quick assets of $1,169,389, or expressed in sterling £240,121.

Dortmund Breweries Co., Limited.

This unhappy German brewery business experienced some of the delights of protection during the year ended September 30 last, and partly owing to this the ordinary shareholders receive no dividend. The directors say they hoped to have been able to recommend the payment of interest on the funding certificates besides a substantial payment on the ordinary shares, but profits were affected in various ways, principally by the necessity of making large provision for bad and doubtful debts incurred by the manager, but also by the new customs tariff, which came into force on March 1 last, and increased the duty upon materials coming from outside the Empire by about 50 pfennigs per hecto. An internal tax upon malt was also increased by about 100 per cent. as from April 1 last. During the coming year these new taxes will make themselves more than ever felt as they have only been partly counterbalanced by an agreement among the principal breweries in Germany to increase the selling price of beer. Barley has cost about 4 per cent. more than last year, and hops about 22½ per cent. more, although of poorer quality, but the new manager hopes that the dissatisfaction caused by the increased price of beer will slowly wear off, and although some losses of customers are unavoidable, if the occupation of the labourers continues as brisk as it was this year, a comparatively satisfactory result for the current period may be anticipated. The sales of beer in the past twelve months were 85,645 hectos, an increase of 3,123 hectos, and the profits of the German company improved by 7,252 marks to 136,603 marks. This admitted of a dividend at the rate of 8½ per cent. per annum, and the nett profit of the English company is brought out at £11,921, an increase of £791. With £1,429 brought in, the total for disposal is £13,350, from which the interest on the debentures and consolidated mortgage bonds takes £6,729, and the full dividend on the preference shares £4,500, leaving £2,121 to be carried forward. This leaves the funding certificates and the ordinary shares without a return of any sort. Small additions were made to the property and goodwill in Germany, raising the total to £171,523, and the shareholding in the German concern is £73,529, while debentures are held to the amount of £21,400, and £46,200 has been lent. The reserve for depreciation is now £19,893, of which £17,889 has been used for additions to the property and £2,004 has been separately invested.

Pryor, Reid, and Co., Limited.

The profits of this concern to September 30 are not greatly different from those of the preceding twelve months. The sales are reported to have slightly increased, but trade on the whole shows few signs of revival. From all sources the revenue was £19,726, and after providing for depreciation and repairs, rates and taxes, insurance, and £517 for the compensation fund, the balance left was £13,536. Various other charges connected with the administration of the company, together with £400 reserved for bad debts, required a further amount of £1,462, interest on debenture stock, mortgages, loans, and deposits was £4,535, and income-tax reached £725, leaving £6,813. This provides the preference dividend with 10 per cent. on the ordinary shares and an increase from £187 to £327 in the sum carried forward. Compensation was received during the year in respect of licences of one leasehold house selected for closure in 1905 and of one freehold house selected in 1906. Five other licences, two freehold and three hired, are waiting payment of compensation, and will be shortly closed. At the date of the balance-sheet the freehold and leasehold properties, including goodwill, were valued at £177,037 and the plant had a book worth of £12,603. The reserve of £8,258 looks small when compared with these items and the position does not seem to quite justify so high a dividend as 10 per cent. Sum due to creditors is £8,039, besides £3,579 owing to bankers. Debtors are moderately substantial at £15,076 but £8,221 of this relates to the Hatfield and Harpenden Breweries, and is apparently in the nature of an advance. Certain investments are held to the amount of £4,152, stock in trade is worth £8,099, and the cash balance is only £707.

Leeds City Brewery, Limited.

Although this company had to provide an unnamed amount for the Compensation fund during the year to September 30, certain economies effected and a steady increase in trade in the latter part of the period enabled it to increase its profits by £1,680 compared with 1904-5. Their total was £15,146, and after providing interest on debentures £2,137, and interest, &c., to leasehold breweries under lease dated June 7, 1904, £8,815,

the balance over is £4,193. This is subject to the terms of the mentioned lease, and makes with £2,513 brought in a total of £6,706, but curiously enough no dividend is recommended on either ordinary or preference shares, the directors proposing to carry forward the entire sum. Evidently there is something curious in connection with the mentioned lease, or the directors would not have allowed the rather poor financial position to deter them from proposing dividends on the share capital. The reserve fund is only £4,383 against the property and goodwill of £192,202. Trading accounts are against the company to the extent of fully £3,000, and while there are sundry unnamed investments of £4,275, the cash balance is only £195.

Bell and Co., Limited.

Here we have a brewery company whose debenture debt is actually £20,000 larger than the issued capital, the two combined making a total of £580,000. This is represented by freehold and leasehold property £529,053, brewery premises £11,665, and fixed and loose plant, casks, drays, &c., £15,768, and goodwill £40,624. The reserve against this mass of assets is £8,000, and no wonder it has been necessary to borrow £13,813 from bankers, besides owing £8,960 to depositors, and £5,900 to creditors. Even so the cash balance is only £250, and it is fairly obvious that loans and interest £10,651 constitute fixed debts which cannot be realised, at least not immediately. Stocks of various kinds are worth £11,841, and debtors, after providing reserves, owe £10,834. Total gross earnings for the year to October 31 were £44,208, and the nett balance £32,312, the charges including £1,588 for the Compensation fund and £5,017 for repairs and depreciation. To the nett balance is added £1,417 brought forward, making £33,729, and after providing debenture interest, preference dividend, directors' fees, and managing director's salary, &c., dividends aggregating 8 per cent. are paid on the ordinary shares, with £1,000 to reserve, and only £1,127 carried forward.

St. Anne's Well Brewery Co., Limited.

A profit of £8,717 was earned by this small brewery in the year to Septemebr 30, and after providing £2,920 for interest on debentures £5,797 is left. This is raised to £6,201 by the sum of £403 brought forward, from which the preference dividend for the complete 12 months is £3,840. Out of the sum still left the directors propose to pay 4 per cent. on the ordinary shares, their own remuneration takes £150, the auditor's fee is £104, and about £100 more at £506 is carried forward. There is no contribution to the reserve fund, which rests at £9,700, and the property account has a balance-sheet value of £140,604. Stock of all kinds is entered at £35,975, and against sundry creditors of £7,460 debtors and loans reach £15,396, cash is £1,272, and £4,373 has been invested in good class securities. The debenture debt is £73,000 against the share capital of £104,000, and there is a separate mortgage for £1,100.

Spencer and Co., Limited.

In the year to September 30 this business earned a gross profit of £59,744, which further revenue from discounts, premiums, interest, &c., increased to £61,784. General charges, salaries, advertising, &c., took £38,621 of this income, interest on debentures was £1,710, and £3,000 was allowed for depreciation. Various smaller charges aggregated £310 and £18,142 remains as the nett balance. Of this the preference dividend requires £1,140, a dividend of 10 per cent. is paid to the ordinary shareholders, the directors are entitled to extra remuneration of £200, and £7,000 is credited to reserve. There is then left a sum of £6,182, the whole of which goes as bonus to the staff and employees, and as this is £2,562 more than the amount of dividend on the ordinary shares it must be said that they are treated with extreme generosity. With the £7,000 now added the reserve fund will be £15,198, besides depreciation and sinking fund £5,000, and a premium account of £505. The freehold properties, plant, loose tools, patterns, &c., have a balance-sheet value of £99,379, and in view of the additions during the year, aggregating £17,254, the depreciation allowance does not seem too much. The balance of trading accounts is rather against the company, but there is stock of £10,372, work in progress £11,605, and cash £9,737. The company has 1,450 £1 shares in the West Wilts Land and Building Company, which it values at par, but we do not know if these return any revenue.

Redpath, Brown, and Co., Limited.

Including £853 brought forward, the profits of this concern for the twelve months to October 31 were £30,272, of which £3,405 is written off for depreciation of buildings and plant and £24,427 is distributed or placed to reserve in accordance with the articles leaving £2,439 to be carried forward, subject to directors' fees. First of all the dividend on the preference shares requires £5,937, and then £2,010 is placed to the preference shareholders' reserve fund. The ordinary shares next receive 5 per cent., and of the surplus the preference shares are entitled to £1,518, which gives them another 1 per cent., and leaves £475 for future distribution, while the ordinary shares get £6,172, or sufficient to raise their dividend to 10 per cent. The balance still remaining of £3,395 is placed to reserve. Total savings will now reach £17,310, and the buildings and works are entered at £102,156 and the plant and tools at £63,217. Goodwill is quite small at £7,500, but we do not know the nature of shares in other companies standing at £10,695. Sundry creditors form a heavy item at £110,901, but notwithstanding this it has been necessary to raise a loan of £3,000, besides using the employees' savings account of £5,774 in the business. This is because sundry debtors owe the very heavy sum of £97,033 and no less than £118,357 is represented by stock. According to the report there has been a large development of the company's merchant business in the export of steel and the directors have reason to believe that this trade will continue to increase in volume, thus adding materially to the profits.

Brett's Patent Lifter Co., Limited.

Business was slightly better for this concern during the twelve months to October 31, and the balance of trading is brought out at £2,201 or an improvement of £849 compared with the previous year. Various small charges, of which the largest is the managing director's salary and general manager's salary and commission, reduce this credit to £1,403, and as £180 was brought forward the sum for disposal is £1,583. That does not seem a very attractive sum, but measured against the issued capital of £6,492 only, it is quite a respectable figure. The directors, indeed, are able to pay a dividend of 15 per cent., being twice as much as in the preceding year, adding £403 to reserve, and substantially increasing the credit carried forward to £255. The reserve will now be £1,800 against goodwill and patents, including an interest in a patent ore-crushing stamp-battery, of £6,232. The fixed plant and machinery has a balance-sheet value of £1,088, and the loose plant, tools, and patterns stand at £817. There is a balance of debtors over creditors of £1,686, stocks and work in progress are worth £2,000, and the cash balance is £1,364.

Waterlow and Sons, Limited.

Little information is afforded in the balance-sheet of this well-known and extensive printing, lithographing and engraving business, but there is no question of the soundness of its general finances. Out of the past year's profits, which amounted to £142,257, it not only provides the dividends of 3½ per cent. and 6 per cent. on the preference and preferred ordinary shares respectively, but a payment of 14 per cent. on the deferred shares. Even then the considerable amount of £30,000 can be placed to reserve and the sum carried forward is £5,769 compared with £4,212 brought forward. The reserve fund is now raised to £270,000 and it is permissible to say that all this money is kept outside the business, since there are investments at cost to the amount of £109,231 and a cash balance of no less than £306,100. Sundry debtors too of £139,055 exceed creditors by £64,282 and although we should like to see the item segregated a little more there is no reason to entertain doubts concerning the stock-in-trade, plant, machinery, fixtures, fittings, leasehold and freehold properties, and goodwill standing under one head at the big figure of £1,205,639. The directors do not favour the shareholders with any general observations on the year's business, but in face of such figures they no doubt think that the mere congratulations which they extend suffice.

John and Edwin Wright, Limited.

A profit of £6,738 was brought out by this concern for the year to September 30, and £4,436 was brought forward, making a total of £11,084. Of this £1,069 has already been distributed by way of interim dividend on the preference shares, and the final payment takes a similar sum. A dividend of 8 per cent. requiring £3,600 is then provided on the ordinary shares, £1,000 goes to reserve, and an exactly similar sum to that brought in is carried forward. The general reserve will now be £9,000 apart from a reserve surplus fund of £16,707, making the total savings £25,707. The freehold and leasehold land and buildings have a balance-sheet value of £42,020, and the plant, machinery, &c., is certified at £40,496. Stock-in-trade is £29,591, and sundry creditors and bills payable are only £12,501 against debtors of £24,977, but the cash in hand is very trifling at £35.

Freehold and Leasehold Investment Co., Limited.

This company continues to increase its revenue by rather doubtful methods, and including £1,598 in respect of the realisation of a portion of a building estate the total income for the year to July 31 was £21,257. From this the charges, including interest, were £12,338, leaving £8,918, and after adding £4,050 brought forward the total credit is £12,968. A dividend of 5 per cent. on the preference shares takes £2,850 and a payment at the same rate on the ordinary shares £5,500, while a further amount of £85 is payable to the directors and manager, leaving £4,533 to be carried forward. The reserve fund remains at £14,000 and the freehold and leasehold property has a balance-sheet value of £424,872.

Norwich and London Accident Insurance Association.

The directors of this company "have much pleasure in submitting their fiftieth annual report," they say, and with reason, for the record of the company is a good one. It has never flared out into great figures but gone quietly on. In its year ended August 31 last the nett premium income was £261,678, an increase of £6,394 on the preceding year. Including interest received and accrued, the entire income was £277,533, out of which claims paid and outstanding, including costs, absorbed £146,870, or £12,593 more. As usual the directors have set aside 40 per cent. of the premiums to cover unexpired risks, and they add £10,000 to the general reserve fund, raising it to £120,000, besides £5,000 to the investment fluctuation reserve, which now amounts to £10,000. Also £1,000 has been placed to the credit of the clerks' superannuation fund, and after all these assignments have been made there was £41,042 left, out of which dividends aggregating £1 per share, or 20 per cent., have been paid, viz., 6s. in last June and 14s. now. The total assets of the association aggregate £459,492.

TRADE AND PRODUCE.

WHEAT.—Business has naturally been very quiet, a holiday mood prevailing in the exchanges as in all other markets. Until the snow arrived the weather was considered fairly satisfactory, the crop is now well rooted, and the recent frost exercised a favourable effect upon the growth. Continental centres generally send satisfactory reports, but in France the weather has not been very seasonable, and there are complaints of vermin. Argentine advices are good, and the Australian outlook continues promising, but in some parts of India the prospects are only moderate. Neither buyers nor sellers seemed much inclined for business after the holidays, and trading was very quiet both in the London cargo market and in the north. A fairly steady tone has prevailed in America, in spite of an increase of 683,000 bushels in Bradstreet's estimate of the quantity in sight East of the Rockies. The quantity of wheat and flour on passage to the United Kingdom is 1,890,000 qrs. against 2,000,000 last week, and to the Continent 1,610,000 compared with 1,805,000. Farmers' deliveries for the past week were 68,978 qrs. against 76,265 last year, making a total for the season to date of 1,144,709 qrs. against 1,462,718 qrs. Imports of wheat and flour into the United Kingdom for the week were 451,220 bushels, an increase of 37,124, making for the season 6,559,652 compared with 6,847,429.

WOOL.—The spell of colder weather that has set in has naturally enough stimulated demand for woollen goods of all kinds, and a very brisk trade has been done in all departments. This has quite changed the condition of the market since the holidays, for prior to these there was not much doing. But that may largely be attributed to the feeling induced by the approach of Christmas and the holidays, for though trade was slack the tone was good, with no indications of weakness in any department. Forties crossbreds are very firm, and handlers of the raw material and tops are more than hopeful of a further rise in values in the coming year. Merinos are likewise firm, but consumers are not booking far ahead, for they look upon the situation as somewhat artificial, owing to the delay in the arrival of new wools.

LINEN.—Supplies of flax have been fairly large, with a steady demand at the prices that have been ruling of late. There has been a further upward movement in Irish yarns, and a large volume of business has been done. In fact, buyers are so anxious to secure suplies, and sellers are so unwilling to part that the advance in values has been so swift as almost to be unprecedented. Ordinary supply and demand alone are responsible for the present position, as there is quite an absence of speculation and cornering. Business is also exceedingly active, especially since the advent of the colder weather, in linens of all sorts. The year closes under most satisfactory conditions, and the outlook for the coming year could hardly be more promising.

COTTON (from our Manchester correspondent).—A holiday feeling has pervaded most sections of our market during the week under review, and owing to business being entirely suspended on two days the business passing has not been at all important. On the whole buyers have not been inclined to purchase except for more than passing wants, and, on the other hand, sellers have not pressed for business, the general desire being to get things squared up before the end of the year. In cloth for export not much has been put through for India. Buyers for the most part seemed to have held aloof. A rather better inquiry for China is reported, and shippers have tested prices pretty well. The outlook on the whole for that quarter is a little brighter. The minor outlets of the Continent and of South America call for no special observation. A number of manufacturers are in an independent mood, and decline to give way in price. Others are rather easier to deal with. The extent of the engagements of makers vary considerably. Home trade American yarns have moved off quietly, with prices rather irregular when tested. Spinners have not made much headway at top prices. Export kinds continue slow in both single and double counts. Bolton spinnings are dearer, and not many orders of weight have been entered. For early delivery of the finer numbers very high prices have to be paid.

In New York cotton opened with a steady tendency, but subsequently gave way on disappointing cables and Wall Street selling. Then came a partial rally on a little "bear" covering and the close finds the market somewhat firmer.

COAL.—Business in the coal trade was somewhat restricted a day or so before the holidays, but since the cold snap it has become much more active, thus bringing about a sharp change for the better from the producers' point of view.

COPPER.—This market did not resume business until Thursday, and then only in a languid fashion. Considerable vitality was displayed right up to the eve of the holidays, with a large business passing both for speculation and consumption. Fairly good buying was again encountered when operations recommenced, and as holders did not offer at all freely, prices further hardened. The tendency continued in favour of holders, and prices were £107 7s.6d. for cash and £108 15s. for three months. Advices from America state that near delivery is almost unobtainable, and that consumers are buying for the early spring. On this side the scarcity is less acute, and the future largely depends upon the continuance of the boom in Germany and America.

TIN.—Quotations for this metal are kept in check by the monetary stringency, and although America buys moderately the demand is relatively poor. The market opened dull, and continued to sink under selling pressure and an absence of important enquiry, prices being £194 5s. for cash and £194 12s. 6d. for three months forward.

IRON AND STEEL.—There is little change to note in the conditions of all branches of the iron and steel trades. Business, where it has been resumed after the holidays, is as brisk as ever and promises to be so for a long time to come. Large orders continue to come from the United States, Germany, and other European countries, where pig-iron is still scarce. In fact, makers find it well-nigh impossible to keep pace with consumption, so works are fully employed, and the future is looked forward to with increasing confidence. Orders, indeed, are coming in so fast that steelmakers are booked to the full extent of their stocks of raw material, and in several places orders are actually being declined. For at least six months to come the majority of steelmakers will be working to their full capacity. Prices, of course, are going up, but it is less a question of price with America and Germany than the question of getting iron.

Letters to the Editors.

LONDON AND NEW YORK INVESTMENT CORPORATION, LIMITED.

SIRS,—I trust you will be able to find space in your current issue for some trenchant criticism with your pungent pen of the report of the London and New York Investment Corporation, Limited. This company again notifies its shareholders with little or no apology that it passes its preference dividend, in consequence of a depreciation amounting to close upon £50,000 in the company's investments.

From the high-sounding title of the concern and the composition of its board—one half being in London and the other mostly in New York, one would at any rate imagine that a large proportion of its investments were American securities. It cannot be that in this quarter depreciation has to be provided for; the merest tyro knows the enhancement in values that has taken place in all reputable American securities this past year, based on the excellent condition of trade and the harvest in the Western Hemisphere.

As the directors on this side have shown their incompetency in so conspicuous a manner—it is noticeable that one of their American colleagues wishes to wash his hands of the whole business and leave the board—it might be best for the shareholders to insist on a committee of investigation, with a view to winding up the company whilst there is yet something to split up amongst them. This investment corporation is a relic of a very unsavoury era, and it is regrettable that a name associated with some of the biggest losses suffered by investors is still controlling its destinies. Who, by the way, are its brokers? And is there any particular reason why the company should continue to exist merely to furnish commission for them and fees for the board who have proved themselves so utterly inefficient?

For a while past now the ordinary shareholders have been receiving some sort of return, which should certainly have been denied them. Before any more debenture stock is placed in front of them the holders of preference shares should, in order to protect themselves, take steps to wind up the company, and realise the assets (which stand in the books at somewhere about £780,000) whilst there is some fat to save from the fire. They at any rate (unless the accounts are fictitious) should be paid in full, and they could hardly invest their own funds with less success than have done their managing director and his colleagues.

Yours faithfully,

BITTERN.

London, December 27, 1906.

Answers to Correspondents.

REEKIE.—The security is equal for the two stocks, and the exchange you suggest therefore seems a good one.

JAMES.—(1) It would certainly be most prudent under existing conditions to sell and get clear. (2) In this case also it would be better not to borrow. (3-11) As to what should be sold we should be disposed to advise Nos. 10 and 11 first, as in the one case you have as good a profit as you are likely to see on the shares, and in the other we see little chance of a recovery. Then you might sell Nos. 9, 5 and 6 in the order named, and to make up the amount required you might use No. 3 or No. 7. No. 3 is an excellent security, well worth holding, if it is possible to complete the sum needed otherwise, but on the other hand, of course, you have a very handsome profit on it.

GRUB.—Yes, both letters came, one on 5th inst. and one on 12th, and were duly answered in a letter forwarded to what we took to be your address in Holland. Will forward duplicate.

"CRUSOE."—You might buy a few as a pure speculation; they stand a goodly chance of improving in price.

J. WILSON.—We are sorry, but yours is not the kind of question that can be answered through the paper. A large amount of time would be consumed in ascertaining the information you require, and it would have to be conveyed to you in a special letter. We hold 1s. to your credit, which will be returned if desired, but may say that we do not believe any new company can be organised.

COMPANY MEETINGS.

COBAR GOLD MINES.

The eighth ordinary general meeting of the Cobar Gold Mines, Limited, was held yesterday at Winchester House, Old Broad Street, E.C., Mr. A. R. Stephenson (the chairman of the company) presiding. Before dealing with the business of the meeting he briefly referred to a change upon the board. Since they last met the previous chairman, Mr. McDonald, had died. He was a most upright and painstaking man of business, whose loss excited sincere regret. (Hear, hear.) The vacancy had been filled by the election of Mr. Pellew-Harvey, representing the Australian Mining and Gold Recovery Company, very large shareholders in this company, and his well-known technical knowledge has enabled him to give us much valuable assistance. The accounts, he proceeded, are very clearly stated, and I have only one or two remarks to make on them. The working profit, which was earned prior to April last when the mill was shut down, you will see was about £22,000, and this is subject to London expenses, some £4,000 odd. I should mention that a large item under this head is income tax, over £1,300, apart from this and directors' fees, the total London expenses being only £1,100 or £550 per annum, which I think you will agree is a very reasonable amount. We have also, as usual, written off a very liberal sum for depreciation. The cash position is a very satisfactory one. After spending £22,500 in the development of the mine, we have cash in hand £63,000 odd, and stores, sundry debtors, &c., £4,700, making a total of nearly £68,000, whilst our entire indebtedness is a small sum of £700 odd, and this cash position brings us to a far more interesting subject than the accounts of the past, viz., the policy and prospects of the future, because, although the company has been in existence for some years, in one sense it is only at the commencement of its career. The past has been devoted to mining and milling for gold a large body of oxidised ore, which overlay the mine as it exists to-day, but the future upon which we are now entering will be devoted to treating ore of a very different character, viz., sulphides containing not only gold, but a considerable proportion of that very valuable mineral copper. This is practically a new enterprise, to prosecute which the cash balance, to which I have just referred, constitutes our working capital. After referring to Mr. Bolker's valuable report and explaining the steps taken to work the valuable gold and copper ores, the Chairman proceeded to say: We are practically starting on a new and permanent proposition, and until it is thoroughly equipped and on a satisfactory profit-earning basis it would undoubtedly be very unwise to part with any of our cash funds for the purpose of a distribution of past profits by way of dividend, and we feel sure that shareholders will, under the circumstances, concur in this view. (Hear, hear.) The present position is very strong. We have between £60,000 and £70,000 in cash, about 120,000 tons of ore developed and estimated to be worth a profit of over £100,000, and, in addition, we have an undoubtedly valuable mine and a large block of property adjoining, which is, as yet, unexplored, and as our capital is extremely moderate—some £176,000—we can, we think, look forward to the future with great confidence, in which view we are confirmed by the intelligent interest which is being, for the first time, taken in our affairs by the outside public, which is always a sure and gratifying sign that one's affairs are worth taking an intelligent interest in. We are no longer hampered, as in the past, by a lack of working capital; we now know the character of the ores which we have and shall have to deal with, and can arrange for their treatment accordingly on a permanent basis, and although we have to forego for the moment the pleasure of receiving a dividend, I think we may look for a steady appreciation in the value of our capital. Having thus placed the position of affairs fully and clearly before the shareholders, the Chairman moved the usual resolution for the adoption of the report and accounts, which was seconded by Mr. Trubshaw and carried unanimously. Mr. A. R. Stephenson and Mr. W. Pellew-Harvey were re-elected directors, and Messrs. Chatteris, Nicholls and Co., the auditors, having been re-elected, the meeting terminated.

AFRICAN ESTATES AND MINING CO., LIMITED.

The seventh annual ordinary and general meeting of the African Estates and Mining Company was held at the Institute of Chartered Accountants, Moorgate Street, yesterday, Mr. Thomas Wilkins (Chairman) presiding.

The Chairman said that the accounts covered a period of upwards of two years, and these and the report accompanying them fully explained the position of the company. It was satisfactory to know from the reports of Mr. Boyd, who was the manager of the Estates on the Gold Coast, that the Chichiwelli Company had reached a stage of development when serious work in gold-getting could now be undertaken. There now remained only the provision of the necessary capital, and there had been placed in his hand the power of dealing with the shares in order that the working capital for development purposes might be forthcoming. He thought, perhaps, it might be advisable in the first place to offer some of the shares to the shareholders in the African Estates Company. The shareholders would notice in the latter part of the report references to a question that had been raised with respect to the contract under which the company had sold the remaining portion of their holding of Himan shares. It was hardly necessary for him to say that he would not have consented to any contract which he did not believe beneficial to the Estates Company, but for many reasons which it was inadvisable to mention at that meeting it was thought better to realise the balance of their holding in Himan shares. Money was wanted for the purposes of other property that was wholly in their hands, whereas they had been obliged to give up a very large portion of the control over the Himan Concession, and had practically very little to do with the spending of the £100,000 which they raised for working capital for that company. He hoped they would not have the same experience in the Chichiwelli Company. With regard to the question of the commission taken by some of the directors, he could not state what the reason for their action was, whatever opinion he might hold about such a course of action. He was not himself implicated, and gentlemen concerned must give their own reasons for what had been done. He begged to move the adoption of the report and accounts.

Mr. S. W. Watson, in seconding the adoption of the report, detailed at some length the negotiations for the sale of Himan shares. He maintained that the contract was a beneficial one for the African Estates Company.

The report and accounts were unanimously adopted.

A long discussion ensued as to the commission received by Mr. Watson and shared by him with Mr. Boult, Mr. Hosking, and Mr. Lyon. The latter handed his commission back to Messrs. Percy Marsden and Co., and in view of the question raised it was stated that the other directors had handed to the company the sums received by them.

A resolution was afterwards passed that the contract of March 29, 1906, for the sale by the company to Messrs. Percy Marsden and Co. of 26,000 Himan Concession shares, be ratified and approved, and that the directors be authorised to consent to any modification, if any, in the dates for payment and delivery as may be agreed upon between the chairman of the company and the purchaser.

Questions were asked with regard to the payment of a dividend, and it was understood that the board would consider the question with a view of recommending a dividend at an early date, when another meeting of shareholders will be called.

The retiring directors, Messrs. P. S. Boult, J. H. Hosking, T. Wilkins, and W. I. Lyon, were re-elected.

A vote of thanks to the chairman terminated the proceedings.

A. Armstrong and Co., Limited.

This small Dublin and Belfast business earned a profit in the year to September 30 of £4,574. The total is arrived at after meeting all business charges and providing for bad and doubtful debts, but it includes a profit on sale of premises, which, perhaps, should not be brought into the profit and loss account at all, being really applicable to capital. There was a balance brought forward of £2,321, making a total of £6,895, and from this the directors' fees and managing directors' remuneration take £628, depreciation £462, and interim dividends £1,500. The sum still left was £4,305, and after bringing up the preference dividend to the regular 5 per cent., a final 2½, also making 5 per cent., is paid on the ordinary shares, £500 goes to reserve, and the carry forward is much the same at £2,305. At the end of the previous year the premises in Dublin and Belfast had a book value of £29,893, and £959 was added during the year, making a total of £30,852. From that should be deducted the premises sold, on which a profit was realised of £583, and the depreciation of £462 already mentioned, so that the balance-sheet value is now £29,806. To the business is attached a goodwill of £7,400, and that is probably quite as much as it is worth. The reserve fund will now amount to £5,500, and as there are investments at cost price, £5,770, the fund may be considered outside the business, although the nature of the securities held is not disclosed. Sums owing to ordinary trade creditors reach £5,868 against debtors of £11,872, stock-in-trade £17,913, and cash and bills of £2,411.

Leech, Neal and Co., Limited.

This business returned a profit of £11,713 for the year to October 31 last, while interest, rents and sundries produced £412 making with £2,336 brought forward a total credit of £14,462. Management and directors' fees require £2,000, a good sum, interest on debentures takes £1,116, and depreciation on investments is provided with £90, leaving £11,255 to divide. The dividend on the preference shares amounts to £3,420, two dividends aggregating 10 per cent. are paid on the ordinary shares, £1,000 is carried to reserve, and a similar sum written off the freehold land, goodwill, plant, &c., leaving £2,836 to be carried forward. The reserve fund is now raised to £17,000, and the property account appears at £95,222, apart from railway wagons valued at £225. Sundry creditors are not important at £5,909, and on the credit side there are book debts £14,925, stock-in-trade £15,342, investments £1,950, and cash £16,799. Rather a comfortable position take it altogether.

Notice is given to the holders of Bengal Nagpur Railway debentures for £390,700 falling due on January 10 next that they can be renewed for four years at 3¾ per cent. interest provided acceptance is notified by January 2.

The shareholders of Williams Deacon's Bank, Limited, yesterday (December 28) confirmed the resolution adopted on the 10th inst. for taking over the Sheffield and Rotherham Joint Stock Banking Company, Limited.

DIVIDENDS ANNOUNCED.

RAILWAYS.

Louisville and Nashville.—3 per cent. on the capital stock, payable Feb. 11.

White Pass and Yukon.—6s. per share.

MINES.

Anaconda Copper.—$1·75 per share, payable Jan. 17.

Meyer and Charlton Gold.—30 per cent., making 60 per cent. for 1906.

New Districts Development.—7½ per cent., payable end of Feb.

New Heriot Gold Mining.—17½ per cent.

New Ravenswood.—Balance of 2d. per share (being £4 3s. 4d. per cent.), making 12½ per cent. for year ended June 30.

Rhenosterfontein Prospecting.—10 per cent., payable end of Feb.

Witwatersrand Deep.—27½ per cent. for nine months ending Dec. 31.

MISCELLANEOUS.

Beeston Brewery.—Final of 1½ per cent. on the ordinary shares, making 2½ per cent. for year ended Sept. 30, placing £1,000 to reserve.

Canada Co.—14s. per share for half-year ended Jan. 10.

Douglas Southern Electric Tramways.—1½ per cent. for year ended Oct. 31, carrying £344 forward.

Edward Wood and Co.—Interim at the rate of 5 per cent. per annum on the ordinary shares for half-year ended Nov. 30.

Humphreys.—At the rate of 12 per cent. per annum on the ordinary shares for year ended Nov. 30.

John Crossley and Sons.—1s. per share on the ordinary shares, making 5 per cent. for year ended Dec. 8.

Midland Trust.—Interim at the rate of 5 per cent. on the ordinary shares.

Scottish American Mortgage.—Interim at the rate of 7 per cent. per annum for half-year ended Nov. 30.

Sheepbridge Coal and Iron.—Interim at the rate of 5 per cent. per annum for half-year ending Dec. 31.

Virginia-Carolina Chemical.—Quarterly at the rate of 8 per cent. per annum on the preference stock payable Jan. 15.

Watson, Woodhead, and Wagstaff.—4 per cent. on the ordinary shares for year ended Nov. 30.

MINING RETURNS.

Brilliant and St. George United.—Crushed 2,334 tons, 1,725 ozs.; residues (tailings and concentrates), value £3,969.

Brilliant Extended.—Crushed 3,798 tons for £7,096.

Briseis Tin.—Shipped 30 tons, including 3 tons for New Brothers Home No. 1.

Broken Hill Proprietary.—Silver, 348,866 oz.; soft lead, 4,283 tons; antimonial lead, 49 tons.

Carrington's United.—Crushed 250 tons for £1,485, included concentrates, &c.

Chinese Engineering.—Output of coal, 23,500 tons; sales, 20,000 tons; consumption 1,550 tons.

Eaglehawk.—Crushed 960 tons, 361 ozs.; from cyanide, 154 ozs.; copper plates, 184 ozs.

Kamfersdam.—Diamonds recovered, 1,657 carats; 13,433 loads blue ground deposited on floors.

Kelantan Dredging (No. 1).—67 ozs.

No. 2 South Great Eastern.—Crushed 4,000 tons for 1,166 ozs.

Oroville Dredging.—Returns for week, $14,500.

Tasmania.—Crushed 4,136 tons, 1,424 ozs.; concentrates, 143 tons, 211 ozs.; cyanide, 1,710 tons, 178 ozs.; total, 1,813 ozs.

NEXT WEEK'S MEETINGS.

MONDAY, DECEMBER 31.

Burmah Development Syndicate.—Cannon Street Hotel, 12.30 p.m.

Barnum and Bailey.—Winchester House, noon.

Baddon Brewery.—Winchester House, 11.30 a.m.

Car Trust and Realisation.—Winchester House, 2.30 p.m.

City of Chicago Brewing and Malting.—Winchester House, 3 p.m.

Great Lucknow Consols.—20, Copthall Avenue, noon.

Indianapolis Breweries.—Winchester House, 2 p.m.

Khedivial Mail Steamship.—Winchester House, 12.30 p.m.

Manila Railway.—Winchester House, 11 a.m.

Shell Transport and Trading.—Winchester House, noon.

Vaal River Diamond.—Cannon Street Hotel, 2.30 p.m.

WEDNESDAY, JANUARY 2.

Buenos Ayres Grand National Tramways.—Winchester House, noon.

Delhi Umballa Kalka Railway.—Winchester House, noon.

Huggins and Co.—Winchester House, noon.

Treasury, December 25, 1906.

NOTICES.

GENERAL MINING & FINANCE CORPORATION LIMITED.

NOTICE IS HEREBY GIVEN that at an Extraordinary General Meeting of Shareholders held at Johannesburg on the 27th December, 1906, it was resolved to increase the Capital of the Company from £1,250,000 to £1,875,000 by the issue of 625,000 New Shares of £1 each ranking *pari passu* with the then existing (Ordinary) Share Capital of 1,249,000 Shares, numbered 1,001—1,250,000 inclusive, to Messrs. G. & L. Albu (acting on behalf of themselves, the Dresdner Bank, Berlin, the Direction der Disconto-Gesellschaft, Berlin, the firm of S. Bleichroeder, Berlin, and the A. Schaaffhausensche Bankverein, Berlin) at the price of £1 5s. per Share, with the proviso that the New Shares should be offered for a period, expiring on the10th January, 1907, to Shareholders registered on the 31st of December, 1906, or being holders of Bearer Warrants who shall deposit same not later than the 8th January, 1907, each Shareholder being entitled to apply for One New Share for every Two Shares held (no fraction being considered) at the price of £1 10s. per Share.

Registered Shareholders desiring to exercise their right to subscribe for the new issue should make application on the necessary Form, accompanied by a Cheque on London, in favour of the General Mining and Finance Corporation, Limited (for the full price of the Shares applied for), so as to reach one of the following places:—

JOHANNESBURG.—At the Head Office of the Corporation, General Mining Buildings;
LONDON.—At the London Office, Winchester House, Old Broad Street, E.C.;
BERLIN.—At the Berlin Office, 35 Behrenstrasse;
At the Dresdner Bank;
At the Direction der Disconto-Gesellschaft;
At the firm of S. Bleichroeder;
At the A. Schaaffhausensche Bankverein;
PARIS.—At the Paris Office, 5 Rue Meyerbeer;
At the Banque de l'Union Parisienne, 7 Rue Chauchat;
BASLE.—At the Actien-Gesellschaft von Speyr & Co.;
ZURICH.—At the Bank in Zürich

not later than the 10th of January, 1907, after which date no application will be entertained. Application Forms can be obtained at any of the above addresses.

Holders of Share Warrants to Bearer desiring to apply for the Shares to which they are entitled in respect of their holding must deposit their Share Warrants, together with a statement in writing of their names and addresses, at one of the above-mentioned places, on or before the 8th of January, 1907. Such Shareholders will thereupon obtain a Form of Application which should be forwarded (accompanied by a cheque on London for the full price of the Shares applied for, in favour of the General Mining and Finance Corporation, Limited), so as to reach one of the Offices or Banks above mentioned not later than the 10th of January, 1907.

The Bearer Warrants so deposited will be returned to their respective owners on or after the 11th January, 1907, on production at the Office at which they were deposited of the formal receipts given.

By Order,
F. W. CHAMBERS,
London Secretary.

London, 28th December, 1906.

THE BENGAL-NAGPUR RAILWAY COMPANY, LIMITED.

NOTICE IS HEREBY GIVEN to the Holders of Debentures, Bonds to Bearer, of this Company, amounting to £390,700, and falling due on the 10th January, 1907, that the Directors, with the sanction of the Secretary of State for India in Council, are prepared to renew such Debentures at par for a further period of four years, with interest at the rate of three and three-quarters per cent. per annum, and with five shillings per £100 brokerage, provided the Holders of the said Debentures intimate their acceptance of this offer and send their Bonds to this Office for endorsement by or before four o'clock in the afternoon, on Wednesday, the 2nd January, 1907.

By order of the Board,
ROBERT MILLER,
Managing Director.

Company's Offices:—
132, Gresham House,
Old Broad Street, E.C.
London, 22nd December, 1906.

BEIRA RAILWAYS.

Debenture Holders' Committee.

NOTICE IS HEREBY GIVEN that on application to the undersigned, the Committee's SEVENTH INTERIM REPORT will be supplied to all Debenture Holders and Debenture Stock Holders who have not already received the same.

By order of the Committee,
FREDERICK WALKER,
Secretary.
